For indoor and outdoor spot heating, these offer the highest heat concentration of any of our electric radiant heaters. They have a quartz-tube heating element, steel housing, and aluminum reflectors. Heaters include two ceiling brackets for surface or chain mounting. Brackets have one 7/32″ dia. hole (fasteners not included) and let you position heaters at up to a 45° angle. Heaters have four 24″ to 36″ wire leads. Operate on 50/60 Hz. UL listed.

Optional safety screens are made of Type 304 stainless steel. *Optional wall-mount thermostat* adjusts from 40° to 110° F. It's single pole, double throw (SPDT) and has three 6″ wire leads. Mount using the four 5/16″ dia. holes (fasteners not included). Operates on 120/277 VAC and is rated for 22 amps. UL listed. For 480 VAC heaters or heaters in three-phase operation, a contactor is required between the heater and thermostat; see pages 902-904. *Optional wall mounting brackets* are made of Type 304 stainless steel and have four 7/32″ dia. holes (fasteners not included).

Volts, VAC	Phase	Watts	Btu/Hr.	Ht. × Wd. × Dp.	Amps	Indoor/Outdoor Mtg. Ht., ft.	Heaters		Replacement Element		Optional Safety Screen

Optional Wall-Mount Thermostat 1747K87 $63.20

Optional Wall Mounting Brackets ..... 1765K49 Pair $107.50

■ Can be field-wired to three phase.

For information about choosing a heater, see page 618.

Ceiling Tile Radiant Heating Panels

Designed like a ceiling tile, these heaters slip into the grid of a drop ceiling. Panels are steel with a white finish and have a graphite heating element and high-density thermal insulation to prevent upward heat loss. They have a 36″ long flexible cable with 6″ long wire leads for hardwiring. 120/240 VAC panels have three leads; 277 VAC panels have two leads. All operate on 60 Hz. ETL listed.

Panel Size, ft.	Phase	Watts	Btu/Hr.	Mounting Ht., ft.	120/240 VAC Amps			277 VAC Amps

Compact Portable Convection Heaters

A circular design distributes heat in all directions, plus there's no electrical cord to tie you down. Heaters have pilot ignition and safety shutoff that cuts the gas supply if the flame goes out. Housing and base are aluminized steel.

Propane gas heaters come with a 20-ft. hose and regulator with a POL connection (the same kind you use to connect your gas grill to the propane tank). CSA certified. Tanks are not included; see page 3391.

Natural gas heater has a ½″ SAE flare male gas connection.

Propane Gas

Fuel	Btu/Hr.	Propane Use, lbs./Hr.	Min. Propane Tank Cap., lbs.	Dia.×Ht.		
Propane Gas	30,000-80,000	1.4-3.7	20	14″×20″	1738K11	$125.03
Propane Gas	75,000-200,000	3.5-9.3	100	14″×26″	1738K16	129.22
Natural Gas	30,000-60,000	—	—	14″×20″	1738K21	125.42

Portable Gas Radiant Heaters

Stay warm at your work site with these heaters. They don't require electricity and are unaffected by drafts—perfect for open areas. All have pilot ignition (unless noted) and a safety shutoff that cuts the gas supply to the heater if the flame goes out. *8,000* to *35,000 Btu/hr.* units are steel with a stainless steel heating element. Ideal for spot heating. *125,000* and *212,000 Btu/hr.* heat in a 360° pattern. *125,000 Btu/hr.* have a stainless steel heating element enclosed in a steel housing. *212,000 Btu/hr.* has a stainless steel housing and heating element.

Propane gas heaters include a regulator with a POL connection (the same kind you use to connect your gas grill to the propane tank). 1719K2 and 1719K3 mount directly to the propane tank (hardware included). 1719K3 also comes with a 14″ hose. 1719K8 and 1715K11 have a 20-ft. hose to connect to the propane tank. Tanks not included; see page 3391.

Natural gas heaters have a ½″ NPT female gas connection.

♦ Size does not include tank. ● Match light.

Portable Gas Forced-Air Heaters

Move these powerful heaters where you need them to distribute heat quickly for fast relief from the cold. They have a steel housing, a safety shutoff that turns the heater off if the flame goes out, and a cord with three-prong plug. Operate on 120 VAC, 60 Hz. CSA certified. All except 1722K18 have a built-in thermostat.

Propane gas heaters include a 20-ft. hose and regulator with a male POL connection (the same kind you use to connect your gas grill to your propane tank). Cord is 6″ long. Tanks not included; see page 3391.

Natural gas heater has a ½″ NPT female gas connection. Cord is 6″ long.

Dual gas heater switches between propane and natural gas with a turn of a lever. It has two wheels and a handle for mobility. Cord is 2 ft. long. Operate on natural gas pressure less than ½ psi; however, if you are using propane gas or natural gas with a pressure greater than ½ psi, a *regulator* (sold separately) is required.

Portable Kerosene/Fuel-Oil Forced-Air Heaters

Use economical kerosene or #1 fuel oil to operate these heaters. All have a safety shutoff that turns the heater off if the flame goes out, a steel housing, and a 6″ long cord with three-prong plug, unless noted. Fan operates on 120 VAC, 60 Hz.

75,000 to *175,000 Btu/hr.* heaters have a thermostat that adjusts from 33° to 99° F.

Style A heaters have a built-in carrying handle. ***Style B*** heaters have two wheels and a handle for mobility.

For information about choosing a heater, see page 618.

Gas Radiant Heaters

22,000 Btu/hr.

40,000 to 120,000 Btu/hr. with Mounting Bracket Kit

Ideal for high-efficiency spot heating, or use multiple units to heat large areas. Heaters have an aluminized steel housing and reflectors and ceramic burners. Gas connections are ½″ NPT female. Units that include extra burners let you reduce or increase heat output to suit your needs. All heaters have a safety shutoff that cuts off the gas supply if the flame goes out. CSA certified. *22,000* and *25,000 Btu/hr.* heaters include wall-mounting brackets and hardware. All other heaters require *mounting bracket kit* (sold separately) to attach to the ceiling.

Pilot-ignition heaters don't require electricity. They include a wall-mount thermostat that adjusts from 35° to 75° F and is single pole, single throw (SPST).

Spark-ignition heaters are good for environments subjected to drafts. Operate on 120 VAC, 60 Hz (1.5 amps). They're single phase and include a 24-volt transformer with screw terminal connections.

Optional chain hanging kit for heaters 40,000 Btu/hr. and up allows you to hang your heater from the ceiling horizontally or at a 45° angle. It includes two 4 ft. long chains, two 1 ft. long chains, and eight S-hooks. *Note:* Ceiling mounting hardware not included.

Optional thermostat for spark ignition heaters adjusts from 35° to 75° F. It has a single pole, single throw (SPST) switch and screw terminal connections. Operates on 120 VAC, 60 Hz, is rated for 0.5 amps, and has a three-prong plug on the back.

Steam- and Hot Water-Powered Forced-Air Heaters

Horizontal Air Flow for Steam

Horizontal Air Flow for Steam and Hot Water

Vertical Air Flow for Steam and Hot Water

Transfer the heat from steam or water to the air. These heaters provide warmth without the low humidity of other systems. Heat output for all units is based on a 2 psi steam input. All hazardous location motors are rated for NEMA Class I, Division 1, Group D and Class II, Division I, Groups F and G for indoor use.

Horizontal Air Flow Heaters for Steam— Max. steam pressure is 200 psi. Max. temperature is 600° F. They have a steel cabinet and galvanized steel heating element to resist the stress of constant expansion and contraction. Heaters have six ½″ dia. mounting holes (fasteners not included). Connections are NPT female. *115/230 VAC* have seven 6″ wire leads. *230/460 VAC* have nine 6″ wire leads.

Horizontal Air Flow Heaters for Steam and Hot Water— Heaters have a steel cabinet to protect the condenser, an aluminum-finned copper heating element, and a junction box for hardwiring. They have two ½″-13 threaded mounting holes (fasteners not included). Connections are NPT female. CSA certified. *230/460 VAC* heaters convert to 230/460 volts when connected to included transformer. Wiring instructions are included. *Heaters with a totally enclosed motor* have a max. steam pressure of 150 psi, and a max. temperature of 375° F. *Heaters with a hazardous location motor* have a max. steam pressure of 87 psi, and a max. temperature of 329° F. They are also rated for NEMA Class III, Division I and II.

Vertical Air Flow Heaters for Steam and Hot Water— Heaters have a steel cabinet to protect the condenser, an aluminum-finned copper heating element, a wire fan guard, and a junction box for hardwiring. Connections are NPT male. CSA certified. *115 VAC* have four ½″-13 mounting holes (fasteners not included); *230/460 VAC* have eight ⅝″ dia. mounting holes (fasteners not included). *Heaters with a totally enclosed motor* have a max. steam pressure of 150 psi, and a max. temperature of 375° F. *Heaters with a hazardous location* motor have a max. steam pressure of 87 psi, and a max. temperature of 329° F. They are also rated for NEMA Class III, Division I and II.

Gas Forced-Air Heaters

Designed for efficiency, these heaters offer excellent performance without wasting energy. They have a spark ignition activated by a thermostat (sold separately) and an automatic safety shutoff that cuts the gas supply if the flame goes out. Housing and burners are aluminized steel.

36,000 and ***80,000 Btu/hr.*** heaters have a shaded pole motor.
100,000 to ***320,000 Btu/hr.*** heaters have a permanent split capacitor motor.

All motors are single phase and operate on 115 VAC, 60 Hz. They have three 5″ long wire leads and a built-in transformer for 24-volt controls. Heaters have 3/8″ mounting holes. Fasteners not included. CSA certified.

Note: Heaters need to be vented to the outdoors. Vent pipe not included; see page 634.

Wall-mount thermostat adjusts from 50° to 90° F. It's SPDT (single pole double throw) and has screw terminals. Operates on 5 to 30 VAC, 50/60 Hz (0.5 amps). Mounting hardware included.

36,000 to 100,000 Btu/hr.

200,000 and 320,000 Btu/hr.

■ 24 ga.

Reducer is 28 ga. and reduces duct width by 2″.
"S" and ***drive cleat*** connectors can be cut to the desired length.

Wd.×Ht.	Reducer		Lg.	"S" Cleat		Drive Cleat	
2″×8″	1964K12	$7.62	5 ft.	1964K92	$4.84	1964K94	$4.64

Turning Vane

Direct the air flow around corners in rectangular duct. To assemble, cut vanes to the height of your duct and fit between two pieces of rail cut to your duct width. Secure using the mounting tabs on the rails. Tabs are spaced 2 1/2″ apart. Vane is 26 ga. Rail is 24 ga.

	Lg.		
Vane	6 ft.	1000K5	$14.67
Rail	6 ft.	1000K2	15.21

Aluminum Snap-Lock Duct and Fittings

Aluminum offers good corrosion resistance and is lighter weight than other duct materials. Duct and fittings are 26 ga.

Duct has a seam that snaps together without any tools and is crimped at one end. ***90° elbows*** are adjustable from straight to 90° and have one crimped end. ***Dampers*** have one crimped end. ***Reducers*** are crimped at the smaller end. ***Increasers*** are crimped at the larger end.

Damper Hardware

Attach to your round or rectangular flat sheet metal (up to 0.022″ thick) to create an instant damper. A ¾″ threaded mount acts as the pivot. For larger dampers, use the second mount to increase stability. Sheet metal not included (see page 3656).

1786K21 ..... $4.62

Downdraft diverters prevent the pilot flame from going out. Mount vertically only.

Quick-Assembly Duct and Fittings

Connection clamps that open and close quickly provide a tight seal and enable fast connection and disconnection. Quick-assembly design makes cleanout convenient and is great for ventilation and dust collection systems. ***Type 304 stainless steel*** offers increased corrosion resistance.

Duct has rolled ends. One ***connection clamp*** is required to join two components. ***Elbows*** 8″ dia. and larger are segmented. ***Heavy duty elbows*** are tubed.

Harsh-Environment PVC-Coated Steel Spiral Duct and Fittings

A 4-mil white PVC coating inside and out makes these components ideal in exhaust and high-humidity applications as well as underground installations. All are 24 ga., unless noted.

Duct has a spiral seam for increased rigidity and is 26 ga. A ***connector sleeve*** is required to join two lengths of duct. Sleeves are 26 ga. ***Reducers*** are 22 ga.

Polyethylene Fabric Duct

Made of durable woven polyethylene with evenly spaced air holes, duct connects easily to a blower or fan to heat and cool your entire facility. Sewn-in snap hooks allow easy installation on cable, beams, and cord. Duct attaches at the top and bottom, so you can direct air either up or down. Slip duct over fan shrouds or blower nozzles and secure with worm-drive clamps (sold separately). Duct is flame retardant. Melting temperature is 180° F. Color is off-white.

Duct Noise Reducers

Mount these noise reducers directly in a run of round ductwork to cut noise levels by as much as 50%. They're made of 26-ga. spiral galvanized steel and have a flange at each end for inserting into existing duct. Inlet and outlet have a rubber seal to prevent leakage.

Vibration-Damping Duct Connectors

Reduce vibration in sheet metal duct systems. Connectors consist of a 4″ wide fabric strip with a 2″ wide strip of galvanized steel at either edge. Just unfold the steel strips and connect to duct with sheet metal screws (not included). Cut to desired length with sheet metal snips.

Canvas fabric resists moisture and mildew. Install on the cool side of the return. Color is green.

Neoprene fabric is waterproof and resists grease and gasoline. Install on the warm or cool side of the return. Color is black.

Fiberglass fabric resists most acids, alkalies, and solvents. Install on the warm side of the return. Color is off-white.

	Max. Temp.	25-ft. Lengths		50-ft. Lengths

Airflow Dampers for Square Duct

Control airflow by adjusting dampers from fully open to fully closed. They're 16-ga. galvanized steel and 5½″ deep and have a vinyl seal.

Fits Duct, Wd. × Ht.		
12″ × 12″	2041K12	$155.00
14″ × 14″	2041K13	174.00
16″ × 16″	2041K14	180.50
24″ × 24″	2041K22	248.00
36″ × 36″	2041K27	412.55

Fire Dampers

A **B**

Prevent fire from traveling through duct and spreading throughout your facility. In the event of a fire, dampers have a fusible link that melts at 165° F and automatically closes the blades. Dampers are 22-ga. galvanized steel and 4⅞″ deep.

UL classified for up to 1½ hour fire rating. Meet UL Standard 555.

Replacement 165° F fusible link can be used with all dampers.

Blast Gates

Gate

Self-Cleaning Gate

Half Gate

Control the flow of air and material with these corrosion-resistant blast gates. Slide is held in position by the included locking screw.

Install ***gates*** and ***self-cleaning gates*** between lengths of duct or pipe using the circular collar. *Self-cleaning gates* are ideal for grain, grit, and packing material. Push the slide through the body to clear debris.

Install ***half gates*** by cutting a thin slot in the duct and mounting the circular collar on the outside. Ideal for retrofitting your current system since you don't need to disassemble the duct to install.

Blast gates ***with Type 304 stainless steel slide*** resist corrosive gases. ***Type 316L stainless steel*** blast gates withstand harsh environments.

Insulated Chimney Vents

Double-walled with 1″ of tightly packed insulation, these chimney vent components provide excellent heat and corrosion resistance. To join components, simply twist ends together and secure with the included locking band. Use with gas- and oil-fired equipment such as steam and hot water boilers. Maximum temperature is 1000° F. UL listed.

Pipe, tees, and ***rain caps*** are 28-ga. Type 304 stainless steel. Tees have a removable cap.

Dia.	18″ Long Pipe		36″ Long Pipe		Tees Lg.			Rain Caps

Roof and Wall Caps

Flat Roof

Sloped Roof

Wall

Flat roof cap is 23-ga. aluminum.

Sloped roof cap is 24-ga. steel with a black-epoxy finish and has a built-in bird screen and backdraft damper.

Wall cap is 24-ga. steel with a black-epoxy finish and has a built-in bird screen, backdraft damper, and four 3⁄16″ dia. mounting holes (fasteners not included).

	For Duct Size	Lg.×Wd.×Ht.		
Flat Roof	8″ Dia.	15″ ×15″ ×9⅞″	6904K22	$50.26
Sloped Roof	3¼″×10″▲	18¾″×14¼″×6⅝″	6904K34	27.73
Wall	3¼″×10″	9¼″×12¾″×5⅝″	6904K36	18.30

▲ Also fits up to 8″ dia. duct.

Inline Flue-Gas Exhausters

Mount exhausters directly to your duct to start air flow, increasing furnace efficiency. They're made of aluminized steel and have a single-phase open motor that operates on 115 VAC, 60 Hz. Maximum flue gas temperature at exhauster inlet is 575° F. Mounting hardware is included.

Note: Cannot be used for sidewall venting applications.

1902K27

1902K11 and ***K14*** have three 6″ wire leads for hardwiring.
1902K27 has screw terminals.

Optional safety switch (sold separately) prevents combustion in case of exhauster failure. It won't allow the burner to fire unless draft is adequate. Switch is zinc-plated steel and includes mounting hardware.

Vent Dia.	Motor Amps	Motor hp	Motor rpm	Cutout Required		
3″ to 6″	0.43	1⁄70	1,550	7⅝″×2⅝″	1902K11	$118.29

8″ to 12″	5.40	¼	1,725	12¾″×4″	1902K27	405.13
Optional Safety Switch					1902K51	70.93

Sidewall Furnace Venters

Vent through a sidewall rather than a chimney. Just mount and wire one of these venters to your oil- or natural gas-powered 24/115 VAC furnace. A thermostat signal starts the venter and a safety circuit ensures proper draft prior to operation. Maximum flue gas temperature is 600° F.

Note: For a complete system you will also need a vent hood (sold separately).

Venters are made of aluminized steel and have a single-phase, open dripproof, 3,000 rpm motor. They have screw terminal connections and operate on 24/115 VAC, 60 Hz. 3972K4 is 1⁄8 hp. 3972K7 is 5⁄16 hp.

Vent hoods are made of aluminum and include mounting hardware.

Venter

Vent Hood

Furnace Btu/Hr.	Vent Dia.	Amps	Venters		Vent Hoods	
150,000-300,000	4″ to 6″	1.76	3972K4	$302.40	3972K13	$115.63
300,000-600,000	6″ to 8″	2.01	3972K7	430.89	3972K18	126.60

Draft Controls

Maintain consistent airflow by regulating drafts in your heating system. Controls are made of cold-rolled steel.

Controls ***with single-acting damper*** open inward to regulate drafts. Controls ***with double-acting damper*** open both inward and outward to relieve positive (above atmospheric) pressures. Use with gas-fired furnaces, boilers, and conversion burners. Controls ***with single/double-acting damper*** can be set to open inward or outward.

For Dia.	Usage		
With Single-Acting Damper			
5″, 6″ and 7″	Oil, Coal	1782K22	$64.81

11″ and 12″	Gas, Oil, Coal	1782K14	217.37

Type B Gas Vents

Use with gas-fired appliances such as water heaters and furnaces. Maximum temperature is 550° F. UL listed.

Pipe, tees, and ***elbows*** have a corrosion-resistant aluminum inner wall for rapid warm-up and a 28-ga. galvanized steel outer wall for durability. One end is slightly flared to allow connection with another component. ***Elbows*** are adjustable to straight.

Rain caps have aluminum inner and outer walls. 4″ to 6″ dia. have a 26-ga. outer wall; 7″ and 8″ dia. have a 22-ga. outer wall.

Roof flashing requires a ***storm collar*** (sold separately) and is for use on roofs with a pitch up to 6/12. Flashing and collars are made of single-layer 28-ga. galvanized steel.

Drop-Ceiling Diffusers

Fit these diffusers into the 2 ft.×2 ft. grid of your drop ceiling. They're made of stamped steel with a white finish.

Diffusers

Perforated diffusers are most often used in retrofit applications.

Grid diffusers disperse a thin layer of cool air along the ceiling surface. As warm air rises, it displaces the cool air, which descends to cool your area.

Diffusers *with fiberglass back panel* have R6 insulation. Diffusers *with steel back panel* have R6 fiberglass insulation with a foil vapor blanket for moisture protection.

Connect diffusers to round duct with a snap-on collar (sold separately). Diffusers fit all collar sizes offered below.

For Duct Dia.	Perforated Diffusers		Grid Diffusers	
With Fiberglass Back Panel				
6″ to 12″	1837K21	$30.37	1837K45	$40.01
With Steel Back Panel				
6″ to 12″	1837K23	68.47	1837K46	65.63
Replacement Diffuser Faces				
Perforated	1837K22	$27.33		
Grid	1837K47	29.08		

Snap-on collars are galvanized steel and attach to diffuser with the included push-in fasteners.

Collar for 6″ Dia. Duct	18525K44	$6.83
Collar for 8″ Dia. Duct	18525K45	6.83
Collar for 10″ Dia. Duct	18525K46	6.99
Collar for 12″ Dia. Duct	18525K47	7.15

Ready-to-Connect Diffusers

Easily connect these diffusers to round duct using the included 2 1/16″ high collar. Back panel is steel.

Insulated diffusers have R1 fiberglass insulation with a foil vapor blanket for moisture protection.

Ceiling Diffusers with Damper

A

B

Save on assembly time—diffusers come with collar and damper already in place. Install easily with the included mounting clips. Collar adjusts to fit 6″, 7″, and 8″ duct. They're made of white ABS plastic for impact, abrasion, and chemical resistance and have a molded one-piece base for an airtight fit.

	Overall Size		
A	11 1/4″ Sq.	2559K5	$27.53
B	12 1/8″ Dia.	2559K9	27.53

Wall/Ceiling Registers

One-Way Airflow

Three-Way Airflow

Four-Way Airflow

Control airflow using the damper on these registers. All are made of stamped steel with a white finish. Overall size is 1 3/8″ greater than the duct size. Mounting fasteners are included.

For Duct Size, Wd.×Ht.		
One-Way Airflow		
8″× 4″	18425K81	$8.44

Drop-Ceiling Filtering Return Grilles

Perforated Face

Louvered Face

Keep dust and dirt from returning to your system by using a 20″×20″×1″ filter inside these grilles. Filter not included; see pages 675-678. Grilles fit into the 2 ft.×2 ft. grid of your drop ceiling and are made of stamped steel with a white finish.

Perforated Face	2532K5	$44.48
Louvered Face	2532K7	44.43

Airflow Switch

Detect airflow in your duct with this adjustable switch. The paddle extends into duct and actuates the switch when airflow reaches the setpoint. Switch is SPDT (single pole, double throw) and has screw terminal connections. Temperature range is 32° to 104°F. UL listed and CSA certified.

Enclosure is steel, rated NEMA 1 for indoor use, and has a ⅞″ hole for ½″ conduit and a 1³⁄₃₂″ knockout for ¾″ conduit. Paddle is 3⅛″ Wd.×6⅞″ Ht. and made of Type 301 stainless steel. It can be trimmed to fit duct size. Paddle should be mounted vertically.

Setpoint Range, fpm	Amps @ 120 VAC	Amps @ 240 VAC		
350-500	16	8	1783K13	$139.47

High-Sensitivity Airflow Switches

Even small pressure changes between two points in your system activate these switches. They're SPDT (single pole, double throw) with screw terminal connections and have a spring-loaded Buna-N diaphragm pressure-sensing element. Enclosure is made of carbon steel and plastic and rated NEMA 1 for indoor use. Temperature range is –40° to +165°F. UL listed and CSA certified.

Pressure connection is ⅛″ NPT female for low-pressure side and ⅛″ NPT female inside × ½″ NPSM (National Pipe Straight Mechanical) outside for high-pressure side. Maximum pressure is 1 psi.

Setpoint Range, inches of H_2O	Accuracy, inches of H_2O	Amps @ 120 VAC	Amps @ 240 VAC		
0.05 to 5	±0.025	5.8	2.9	1795K1	$90.32
0.05 to 5	±0.04	9.8	4.9	1795K6	90.32

Damper Actuators

Position and control airflow dampers with these actuators. They're adjustable for clockwise and counterclockwise rotation and setpoint from 0° to 90° (unless noted). No linkages required—they directly operate the damper shaft. All operate on 24 VAC, 50/60 Hz or 24 VDC except 1742K16, K17, and K24, which operate on VAC only. UL listed.

Incremental input signal activates when the system varies from the setpoint by a certain amount. Actuator moves only until the system requirement is met.

Proportional input signal provides improved control because the actuator is constantly being positioned in response to system requirements. Responds to a 0 to 10 VDC or 0 to 20 mA control signal.

Actuators ***without spring return*** have a plastic enclosure rated NEMA 2 for indoor use except 1742K16, which has an enclosure rated NEMA 1 for indoor use. CSA certified.

Actuators ***with spring return*** can be set to return the damper from either direction and have a manual crank for precise adjustment. All have an aluminum enclosure rated NEMA 2 for indoor use.

Low-Voltage Thermostats

Control your low-voltage (24 VAC) heating and cooling systems with these single-stage thermostats. They have screw terminal connections and are rated for 1 amp. All are mercury free and include mounting fasteners.

Rectangular thermostats can be installed horizontally and vertically. Color is off-white.

Round thermostats are white.

Low-Voltage Programmable Thermostats

A

B

Set an individual program for weekdays, Saturday, and Sunday with up to four temperature changes per day. These thermostats control low-voltage (24 VAC) heating and cooling systems. They're rated for 1.5 amps and have battery back up (two AA included) to retain your program even if the power fails. Display is a backlit LCD. All are mercury free and include mounting fasteners. Color is white.

Style B have a touch-screen display. You can also set one program for each day of the week.

Single-stage thermostat model 1821K17 can support one remote sensor (sold separately).

Multistage thermostat can control up to three heating stages and two cooling stages and support one remote sensor (sold separately).

Optional remote sensor for Style B takes temperature readings up to 300 ft. from the thermostat.

For System Type	VAC	Temp. Range, °F	Ht. × Wd. × Dp.

Line-Voltage Thermostats

C

E

G

J

L

D

F

H

K

All are mercury free and UL listed except Style K, which are ETL listed. Only Style C includes mounting fasteners.

NEMA 1 enclosures are for indoor use. *NEMA 4X* are for indoor/outdoor use and exposure to splashing liquids, corrosive agents, and dusty environments. *NEMA 7* meet Class I, Group D. *NEMA 9* meet Class II, Groups E, F, and G. Both NEMA 7 and 9 are for indoor hazardous duty.

Style D has a 6-ft. long cord with a piggyback plug for connection to an outlet and your heater. Includes a hanging bracket.

Styles E and ***F*** have four ¾″ × ⅛″ mounting slots.

Style G has an easy-to-read LCD, a three-button keypad for setup and adjustment, and four ⅜″ keyholes for DIN rail mounting.

Styles H and ***J*** are ideal for sensing temperature of liquids, such as in hydronic heating systems. ***Style J*** has four ¼″ × ⅛″ mounting slots.

Style K have four 5/32″ dia. mounting holes.

Style L has two ⅜″ dia. mounting holes.

Low-Voltage/Line-Voltage Thermostats

A

B

C

D

In addition to line-voltage applications, these versatile thermostats also support low-voltage (24 VAC) systems. They're mercury free and have screw terminal connections and built-in sensors. All except Style C include mounting fasteners.

NEMA 1 enclosures are for indoor use. *NEMA 4X* is for indoor/outdoor use and exposure to splashing liquids, corrosive agents, and dusty environments. *NEMA 7* meet Class I, Groups C and D. *NEMA 9* meet Class II, Groups E, F, and G. Both are for indoor hazardous duty.

Style B can be set to activate 3½° to 18° F after the first stage.

Style C have two ¼″ dia. mounting holes.

Style D protect equipment either by shutting it down or, when the temperature gets too low, closing a damper to stop the flow of cold air. For added safety, thermostats must be reset manually. They also include a remote sensor with 10-ft. cord that can be threaded through equipment to sense temperatures at multiple points.

● SPDT = single pole, double throw; DPDT = double pole, double throw. ■ Both switches activate at the same temperature.

Modular DIN Rail-Mount Thermostats

Build a multistage thermostat to control multiple devices. Thermostats and additional stages plug together and can be DIN rail or surface mounted. Units are 5″ Ht. × 2⅜″ Wd. × 2⅜″ Dp. and have four ⅛″ wide mounting slots (fasteners not included). Operate on 24 VAC, 50/60 Hz and control 120-240 VAC loads. UL listed.

Thermostats can be used for both heating and cooling and have a built-in sensor with two 9¾″ leads. They're rated for 10 amps and have an SPDT (single pole, double throw) switch. They have screw terminal connections, a ⅞″ dia. opening for conduit, and can accommodate up to nine additional stages.

Additional stage has a SPDT (single pole, double throw) switch and is rated for 10 amps.

Power supply produces 24 VDC power from 120/240 VAC input to run a thermostat and additional stages. It has screw terminals and a ⅞″ dia. opening for conduit.

Also Available: Additional accessories and replacement parts. Please ask for 4733K88.

	Temp. Range, °F		
Thermostat	−30° to +130°	4733K71	$123.94
Thermostat	+90° to +250°	4733K62	123.94
Additional Stage		4733K73	79.87
Power Supply		4733K91	72.16

Air-Powered Thermostats

Powered by compressed air, these thermostats do the job when electricity is not practical or available. They're also known as two-pipe thermostats. The air supply feeds directly to the thermostat and then through the relay, which in turn delivers air to your device. Max. pressure is 30 psi. They use 15.6 scim (standard cubic inches/minute) @ 20 psi. Air connections have internal filters. Calibration point is set at 9 psi.

Thermostats have a built-in sensor and include a universal fitting kit that consists of a cover, blank cover conversion, mounting plate, dial stops, screws, tubing reducers, tubing, and mounting hardware.

Direct-Action Thermostat— As the temperature goes up, the pressure in the system goes up.

Reverse-Action Thermostat— As the temperature goes up, the pressure in the system goes down.

Test kit lets you conveniently check thermostats without the use of an air compressor. Kit includes a pressure gauge, hand pump, ⅛″ NPT male and female pipe fittings, and a carrying case.

Calibration kit enables quick adjustment of air-powered thermostats. Kit includes a pressure gauge with ⅛″ NPT male connection, a 3/16″ NPT male adapter, adjustment wrench, Allen wrench, and screwdriver. Furnished in a plastic case.

	Temp. Range, °F		
Direct-Action Thermostat	55° to 85°	17245K73	$189.55
Reverse-Action Thermostat	55° to 85°	17245K74	185.33
Test Kit		4012K11	81.38
Calibration Kit		17245K75	166.86
Replacement Squeeze Bulb for Test Kit		4012K34	28.04

Thermostat Guards

Deter tampering and protect thermostats from damage. All guards mount horizontally and vertically and are vented and keyed alike (one key included). Guards with a ring base mount without removing the thermostat from the wall.

Thermoplastic guards include both a solid base and a ring base except 1852K1, which only has a solid base.

To Order: Please specify clear or opaque, unless noted. Clear guards allow you to see the temperature settings through the guard. Opaque guards are beige except for 1852K2, which is off-white.

Steel guards 1852K27, K22, K43, and K45 have a hinged cover.

Extra Key 1852K24 $1.50

Humidity Controls

2123K14

The single-knob control allows easy adjustment of humidity equipment. Mounting hardware is included. 2123K18 has spade terminal connections and mounts to a wall or duct. 2123K14 has screw terminal connections and fits standard outlet boxes.

VAC	Amps	Relative Humidity	Switch Type▲	Ht. × Wd. × Dp.	Color		
For Humidifiers Only							
24 to 30	2	10 to 60%	SPST	3 3/16″ × 5″ × 1 3/4″	White	2123K18	$24.11
For Humidifiers and Dehumidifiers

▲SPST = single pole, single throw. SPDT = single pole, double throw.

Low-Velocity Airflow Meter

Measure airflow in spray booths and exhaust hoods. This swinging vane-style meter has a range of 25-400 fpm. It's 3 7/8″ Ht. × 3 7/8″ Wd. × 1 5/16″ Dp. and includes a spare vane and steel mounting bracket with ten 3/16″ dia. holes (fasteners not included).

			Each
Air Flow Meter	4075K61		$33.22
Repl. Vanes (2/Pkg.)	4075K74	Pkg.	$13.85

Remote-Reading Digital Airflow/Temperature Meters

A

B

Access hard-to-reach places in your ductwork with these meters. All have an RS-232 port and an LCD that simultaneously displays airflow and temperature. Airflow can be displayed in mph, knots, m/sec., and km/hr. 4120K35 and *K37* also measure air volume (cfm).

(A) Meter with Fan Probe— Comes with a 39″ cable. Operates on one 9-volt battery (included). Size is 7″ Ht. × 2 15/16″ Wd. × 1 5/16″ Dp.

(B) Meters with Telescoping Probe— 4120K54 has a 47″ long cable and 1/2″ dia. probe that extends to 37″ long. Operates on six AAA batteries (included). Overall size is 7″ Ht. × 2 13/16″ Wd. × 1 5/16″ Dp. 4120K37 has a 66″ long cable and a 1/2″ dia. probe that extends to 36″ long. Operates on four AA batteries (included). Overall size is 7 15/16″ Ht. × 3″ Wd. × 1 1/2″ Dp.

Data Software and Cable— Transfer data from the meter to your PC using Windows 95/98/NT/2000/XP. The cable has a 9-pin serial port connector. For a USB connection, you'll also need a *USB adapter cable* (sold separately).

Airflow, fpm	Air Volume, cfm	Temp. Range, °F

★0° to 80° C. ●0° to 50° C.

Smoke Generators

Detect airflow and leaks in your duct system.

Candles— Light the wick for instant billowing gray-white smoke.

Burning Time	Smoke Volume	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
30 Seconds	4,000 cu. ft.	12	4093K14	$6.41	$5.85
1 Minute	8,000 cu. ft.	12	4093K13	7.21	6.58
3 Minutes	40,000 cu. ft.	12	4093K12	13.14	11.99

Pen— Produce a continuous trail of smoke—just expose about 3/8″ of the wick and light. Replace cap to extinguish until next use. Pen includes six wicks, which provide up to 360 individual 30-second tests.

			Each
Pen	4101T5		$54.42
Refill Wicks (6/Pkg.)	4101T7	Pkg.	$43.50

Powdered Smoke— Furnished in a 2-oz. bottle. Squeeze to produce a white cloud.

3880K31 ..... Each $5.58

Airflow/Static Pressure Meter

Dual airflow and static pressure scales indicate high and low ranges.

This easy-to-use meter includes a 14″ long tube, grille probes, an extra plastic float ball, an airflow calculator, and a carrying case.

Airflow, fpm	Static Pressure, inches of H_2O		
260 to 4,000	0.005 to 1.0	4020K71	$40.45

Compact Digital Airflow/Temperature Meters

Small enough for your pocket, these meters fit into duct openings that other meters can't access. Airflow measurement range is 100-5,500 fpm; meters also display in mph, knots, m/sec., km/hr. Measure temperatures 0° to 122° F (–18° to +50° C). The LCD displays airflow and one other measurement simultaneously. Other functions include hold and automatic shutoff. Operate on one lithium battery (included). Meters are 5 1/4″ Ht. × 2 3/4″ Wd. × 3/4″ Dp. and extend to 9″. Housing is water-resistant ABS plastic. Furnished with a lanyard.

Airflow/temperature meter reads airflow, temperature, and wind chill.

Airflow/temperature/humidity meter reads airflow, temperature, wind chill, relative humidity (10 to 95%), and dew point (32° to 122° F).

Airflow/Temperature Meter	1410K14	$111.85
Airflow/Temperature/Humidity Meter	1410K15	152.53
Vinyl Carrying Case	1410K18	11.10
Replacement Lithium Battery	7701K34	1.92

Digital Air Volume Meter

Simply hold the hood on this meter up to diffusers, registers, or grilles to measure air volume and balance airflow in your system. Meter also reads temperature, humidity, and other common HVAC measurements. It has a six-digit LCD, 18″ probe, and an RS-232 connector. Operates on four AA rechargeable NiCad batteries (included). Hood is 2 ft. × 2 ft. Other sizes sold separately.

Set of two hoods includes sizes 1 ft. × 4 ft. and 2 ft. × 4 ft. ***Set of four hoods*** includes sizes 1 ft. × 4 ft.; 1 ft. × 5 ft.; 2 ft. × 4 ft.; and 3 ft. × 3 ft.

Air Volume, cfm	Relative Humidity	Temp. Range, °F		
25 to 2,500	0 to 95%	–40° to +250°	38385K33	$3,778.48
Set of 2 Hoods			38385K45	607.59
Set of 4 Hoods			38385K46	1,215.19

Fog Generator

Use fog to detect airflow and leaks in your duct system. This generator warms up in five minutes and the fluid level is visible from outside the machine. Generator is 14.4″ Lg. × 8″ Wd. × 6″ Ht. and includes a remote control with a 30-ft. cord. Operates on 120 VAC, 60 Hz (10 amp draw) and has a 6-ft. cord with three-prong plug.

A well inside the machine holds 1 liter of fog fluid (sold separately), which provides one hour of service.

Fog Machine	38985K62	$533.08
Fog Fluid (1 liter)	38985K63	20.04
Fog Fluid (1 gallon)	38985K65	70.85

Air Conditioning Charging and Testing Hoses

Hoses are made of rubber. ***Style A*** have SAE 45° flared brass fittings on both ends. ***Style B*** have an SAE 45° flared brass fitting at one end and a 1/4″ SAE flared brass ball valve at the other for faster refrigerant recovery and a tighter seal. Hoses with 1/4″ fittings are UL recognized. **To Order:** For individual hoses, please specify color where necessary.

Air Conditioning Charging and Testing Manifolds

Check refrigerant pressure and monitor recharging with these manifolds. They have double O-ring piston valves and two 3 1/8″ dia. gauges (color-coded blue and red) with a polycarbonate lens, unless noted.

Two-valve and ***four-valve manifolds*** have SAE flared vacuum ports for speedy charging and evacuation, aluminum valve bodies, and a sight glass for inspecting refrigerant, unless noted. *Two-valve manifolds* have 1/4″ fittings. *Four-valve manifolds* have 3/8″ fittings and let you troubleshoot, evacuate, and charge a system without switching hoses.

Automotive two-valve manifold has brass valve bodies and hoses with 1/2″ Acme fittings. Ports have 1/4″ SAE flared fittings.

Optional rubber gauge cover set includes one blue and one red. Use with all manifolds except 1873K79 and K23.

Refrigerant Recovery Machine

Recover all common CFC (chlorofluorocarbon), HFC (hydrofluorocarbon), and HCFC (hydrochlorofluorocarbon) refrigerants with this machine. The compressor is oilless; handles liquids and vapor; and can purge itself of moisture, contaminants, and excess refrigerant.

Machine has a 1/4″ SAE flared hose connection, 12″ Ht. × 9″ Wd. × 17″ Dp. polypropylene housing, and a handle for portability. Operates on 115 VAC, 60 Hz (12-amp draw) and has an 78″ cord with three-prong plug.

18035K7 ..... $596.34

Refrigerant Recovery Cylinders

Store recovered refrigerant in these reusable carbon steel cylinders prior to recycling. Cylinders meet D.O.T. specifications 4BA and 4BW. All except the 15-lb. capacity cylinder have a 1/4″ air tank valve opening and a plugged 3/4″ opening for installing an optional *fill-level switch* (sold separately) that prevents cylinder from overfilling.

1/4″ SAE Y-valve cylinders are gray and yellow. ***Acme Y-valve*** cylinders are light blue.

15-lb. Cap.

Cap., lbs.	Pressure Rating	Dia. × Ht.	1/4″ SAE Y-Valve		Acme Y-Valve	
15	400 psi	8″ × 12 1/16″	17305K77	$74.98	—	—
30	350 psi	8 7/8″ × 18 3/16″	17305K72	79.75	17305K73	$90.03

50	400 psi	12″ × 18 5/8″	17305K76	117.48	17305K75	121.20
Fill-Level Switch for 30- and 50-lb. Capacity			17305K41	44.29		

Refrigerant Cylinder Charging Scales

Weigh your refrigerant cylinder precisely so you can dispense the right charge to your air conditioning system. The LCD displays weight in lbs. and kg.

Nonprogrammable scale operates on one 9-volt battery (included).

Programmable scale can be set to dispense an exact amount of refrigerant. Operates on four AA batteries and one 9-volt battery (included).

Nonprogrammable

	Charging Range	Lg. × Wd. × Dp.		Each
Nonprogrammable	0-110 lbs.	15 1/4″ × 10 1/2″ × 2 1/2″	1779K8	$159.34
Programmable	0-220 lbs.	16 1/2″ × 11 3/4″ × 2 3/4″	1779K7	347.25
Replacement 9-volt Battery (1/Pkg.)			71455K56	Pkg. $2.75
Replacement AA Batteries (4/Pkg.)			71455K53	Pkg. $2.94

Coil Cleaners

Aerosol cleaner cleans and deodorizes without rinsing.

1- and ***5-gal. cleaners*** contain acid for tougher jobs. Spray or brush these liquids on; then rinse off.

Brush has a 10 1/4″ long section of black nylon bristles that tapers from 1 1/2″ to 3/4″ dia. Handle is polypropylene. Overall length is 26″.

18-oz. Aerosol Cleaner	17315K25	$9.53
1-gal. Container Cleaner	17315K26	15.00
5-gal. Container Cleaner	17315K27	68.10
Brush	7326T11	9.94

Air Conditioning Service Valves

Tap into refrigerant lines to charge and evacuate a system. All valves have a 1/4″ SAE flared male port and include a 1/4″ nickel-plated brass valve core and 1/4″ die cast zinc cap except *Style A*, which has a brass cap.

Self-piercing valves can be installed without evacuating the system.

Extended-tube valves offer greater reach for easier servicing.

Valves with ***removable core*** provide unobstructed flow for your refrigerant once the core is removed.

Fan-Motor Kits for Refrigeration Equipment

Everything you need to replace almost any fan motor on commercial refrigeration units, appliances, and small fans and blowers. Kits contain a reversible motor, two adjustable H mounting brackets, two fan blades (unless noted), and all necessary hardware. Motor is single speed (except 19265K7, which is two speed) and has leads for hardwiring.

Motor components for 19265K8, ***K5***, and ***K9*** are UL recognized.

19265K7 and ***K6*** motors are UL listed.

Blade Dia.	cfm	rpm	Amps

4″, 5 1/2″	110, 240	3,000	0.16	19265K6	22.69

● Includes three blades.

Enclosure Air Conditioners

When the heat's too much for a fan, upgrade to air conditioners that use environmentally friendly R-134a refrigerant. They have a thermostat that adjusts from 68° to 131° F and terminal blocks for hardwiring. Air conditioners operate at 50/60 Hz, unless noted. Components are UL and C-UL recognized. Units include mounting hardware and templates for creating the cutouts required for mounting. All except 17495K19 and K25 have a programmable alarm and an LCD temperature display.

NEMA 12 air conditioners resist dirt and light water splashes.

NEMA 4X air conditioners are waterproof and corrosion resistant.

How much cooling capacity do you need? Calculate the area of your enclosure with the following formula:

$$2(\text{Ht.} \times \text{Wd.}) + 2(\text{Dp.} \times \text{Ht.}) + (\text{Wd.} \times \text{Dp.})$$

Next, determine the desired enclosure air temperature, **T1**. At the hottest time of the year, with all the doors closed, measure the actual internal enclosure air temperature, **T2**. Calculate the temperature differential—**T2 – T1**.

Use the table at right to find the temperature differential nearest to yours and the corresponding Btu/Hr./ft.^{2}. Multiply that by the enclosure area.

T2 – T1	Btu/Hr./ft.^{2}	T2 – T1	Btu/Hr./ft.^{2}
5° F	4.9	25° F	24.2
10° F	9.7	30° F	29.1
15° F	14.5	35° F	34.0
20° F	19.4	40° F	38.8

Example:

Enclosure is 5 ft. high × 4 ft. wide × 3 ft. deep.

Enclosure area: $2(5 \times 4) + 2(3 \times 5) + (4 \times 3) = 82$ ft.^{2}

T2 – T1 = 30° F

Cooling Capacity: 82 × 29.1 = 2,386 Btu/Hr.

Cooling Cap., Btu/Hr.	Overall Size, Ht.×Wd.×Dp.	Fits Opening Size, Ht.×Wd.	115 VAC Single Phase Amps			230 VAC Single Phase Amps			460 VAC Three Phase Amps

Optional Data-Logging Software—Compatible with Windows 98, 2000, NT, and XP. This software allows you to upload temperature and maintenance data to your computer using the included RS-232 cable. *Note:* Cannot be used with 17495K19 or K21.

17495K981 ..... $263.50

Enclosure Fans

Circulate air to dissipate heat in your electrical enclosure. These fans are reversible to pull hot air out or draw cooler outside air in through a filter that removes dirt and dust. Motors operate on 115 VAC, 50/60 Hz and have UL recognized components.

(A) Corrosion Resistant (IP54) with Disposable Filter— To reverse airflow, unbolt fan motor from plastic housing, turn motor 180°, and use the same holes to install. Grille is Noryl plastic. Fans include mounting fasteners. IP54 rated for protection against dust and water splashes. *Replacement filters* come in packages of five.

(B) With Washable Aluminum Filter— Position the tabs to mount inside or outside the enclosure for either intake or exhaust. Filter is aluminum mesh and removes easily for cleaning and maintenance. Grille is zinc-plated steel. Fans have 0.22″ dia. mounting holes (fasteners not included).

Enclosure Fan Trays

Slide these trays in to cool your standard 19″ wide enclosure. They are sized and notched in accordance with Electronic Industry Association (EIA) standards. Tray is steel; fan blades are glass-filled plastic. Operate on 115 VAC, 50/60 Hz and have a 6-ft. cord with three-prong plug. Components are UL recognized. CSA certified. Mounting fasteners included.

Three-Fan Tray

Enclosure-Cooling Blowers

For smaller spaces that can't accommodate enclosure fans, try one of these blowers. They draw cooler outside air into your enclosure and expel hot air through a louvered outlet vent. Incoming air is filtered to keep out dust and contaminants. The main filter is made of pleated paper and wrapped in a polyester prefilter. Blowers have a steel housing and galvanized steel fan blades. Both units operate on 115 VAC, 60 Hz and have leads for hardwiring.

1730K11 has an open dripproof (ODP) motor.
1730K12 has a totally enclosed nonventilated (TENV) motor.

Air-Powered Vortex-Tube Enclosure Coolers

Drawing on a supply of compressed air, these coolers incorporate a vortex tube that lowers the temperature of incoming air by 50°F or more while positively pressurizing your enclosure to keep dust and other contaminants out. Coolers require a compressed air source of 80 to 100 psi. They come with an inline compressed air filter and an outlet ducting kit to distribute cool air throughout the enclosure. UL listed.

Coolers ***without thermostat*** operate solely on compressed air; no electricity is required.

Coolers ***with thermostat*** provide protection from high temperatures and conserve air by switching on only when needed. *Electric* thermostats adjust from 50° to 140°F and require a second opening of 11/16″ dia., unless noted. They operate on 115 VAC, 60 Hz and have leads for hardwiring. NEMA 12 draw 0.08 amps. NEMA 4 and 4X draw 0.05 amps. *Mechanical* thermostats don't require electricity. They're nonadjustable and provide protection from 80° to 90°F.

NEMA 12 coolers are rated for indoor use and resist dirt and light water splashes.

NEMA 4 coolers are rated for indoor/outdoor and washdown use.

NEMA 4X coolers are waterproof and corrosion resistant. ***Quiet*** coolers are perfect for low-noise environments such as labs and clean rooms, or keeping your loud environment below noise-level standards.

Equipment-Cooling Fans

Square

Round

Oblong

Compact and ready to install, these fans are a popular choice for cooling heat-sensitive equipment. They're also known as muffin fans. Mounting fasteners not included. For fan guards, filters, and thermostat, see following page.

AC fans have a single-phase motor and operate at 50/60 Hz except 1976K27 and K64, which operate at 60 Hz. CSA certified, unless noted. All have UL recognized components, unless noted. Frame is aluminum and blades are steel, unless noted. 1976K26, *K81*, and *K82* include a plastic-coated steel fan guard. Fans with *quick-disconnect (QD) terminals* are compatible with the power cords on the following page.

DC fans have UL recognized components. *Square fans* have a plastic frame and blades, unless noted. *Round fans* have an aluminum frame and plastic blades, unless noted.

Equipment-Cooling Fan Accessories

Fan Guards

Square Nickel-Plated Steel

Square Plastic

Round Plastic

Square EMI/RFI

Square Plastic with Filter

Sized to fit the fans on this and the previous page.

EMI/RFI fan guards have stainless steel mesh screens in an aluminum frame to shield against electromagnetic and radio-frequency interference.

Plastic fan guards with filter include a foam filter and a plastic retainer to keep it in place. Original and replacement filters for 19155K2, K3, and K4 can filter 30 ppi (particles per inch), 45 ppi for 19155K22 and K23, and 60 ppi for 19155K5.

Thermostat

Control air temperature in your enclosure. This thermostat adjusts from 32° to 140° F and has screw terminal connections. The switch is SPST (single pole, single throw) and rated 15 amps @ 120 VAC, 10 amps @ 250 VAC, and 30 watts at 12-24 VDC. Overall size is 2.4″ Ht. × 1.3″ Wd. × 1.7″ Dp. Mounts on a 35 mm DIN rail.

19155K16 ..... $33.20

Equipment-Cooling Fan Kits

With Steel Fan Guard, 115 VAC

With Filter and Plastic Fan Guard, 115 VAC

Here's everything you need to start cooling your equipment. Kits include a fan, guard, and 72″ cord. 115 VAC have a two-prong plug; 230 VAC have a three-prong plug. Fans have an aluminum frame, plastic blades, and operate at 50/60 Hz. Components are UL recognized. Cord is UL listed. Fasteners not included.

Kits ***with filter and plastic fan guard*** include a foam filter held in place by a plastic retainer. 3.15″ fans filter 30 ppi (particles per inch); 4.69″ and 6.77″ fans filter 45 ppi. For replacement filters, see previous page.

Heaters for Equipment-Cooling Fans

Maintain an optimum temperature and reduce humidity inside your enclosure by heating the airflow from your equipment-cooling fan. These heaters have a black-painted aluminum frame that protects the heating element and fits the same-size equipment-cooling fans on pages 644-645. They're single phase, operate at 60 Hz, and have leads for hardwiring. Install in place of a fan guard using the 3/16″ dia. mounting holes (fasteners not included). Components are UL recognized.

Low-Profile Enclosure-Cooling Fans

Small in size but big on power, these fans fit tight spaces in your enclosure or duct. Also called motorized impellers, they include a run capacitor and inlet ring. Air enters at the center and is exhausted from the perimeter of the fan. Motor is single phase and has leads for hardwiring. Frame is plastic.

Equipment-Cooling Blowers

Great for spaces where fans with straight-through airflow won't fit. Air enters these blowers through the center of the unit and then exhausts out the side. Blowers have leads for hardwiring and are made of fiberglass-reinforced plastic with a galvanized steel base plate. Components are UL recognized. CSA certified.

5.31″ and *7.09″* blowers have 0.17″ dia. mounting holes; *8.66″* blowers have 0.21″ dia. mounting holes (fasteners not included).

115 VAC blowers operate at 60 Hz.

Air-Powered Vortex-Tube Equipment Coolers

Connect one of these vortex tubes to your compressed air supply for instant cold air without the need for electricity. The generator cools air to –20°F. Adjust the temperature with the valve on the hot-air exhaust end of the tube. Coolers are made of Type 303 stainless steel and have no moving parts, so they're maintenance free.

Note: Vortex tubes require a filter (4274K31, sold separately) on the air supply.

Kits include a vortex tube, airflow adjusters, cold-air muffler, tube, tube fitting, and clips. *Three-adjuster kit* has a 4.13″ long vortex tube. *Five-adjuster kit* has a 5.68″ long vortex tube.

Airflow adjusters let you change the airflow (cfm) of your vortex tube. **To Order:** For 31035K31, please specify 2, 4, or 8 cfm. For 31035K41, please specify 10, 15, 25, 30, or 40 cfm.

Air Conditioners

Stay cool. These air conditioners have an adjustable thermostat (63° to 90° F), adjustable louvers for directing airflow, a slide-out chassis for easy maintenance, and a cord with three-prong NEMA plug. Operate at 60 Hz. UL and C-UL listed. All have a remote and electronic controls.

115 VAC have a 6-ft. cord.

208/230 VAC have a 4-ft. cord, except 1843K97, which has a 2½-ft. cord.

Note: The higher the energy efficiency ratio, the more energy efficient the unit.

Combination Air Conditioner/Heaters

Keep your work area comfortable year-round. These energy-efficient units have a remote control, electronic controls, an adjustable thermostat (60° to 99° F), a slide-out chassis for easy maintenance, and a 1/32″ thick antimicrobial washable filter. They're single phase, operate on 208-230 VAC, 60 Hz, and have a 4-ft. cord with three-prong plug. UL and C-UL listed.

You can mount these units in a window 27⅜″ to 42″ wide using a *mounting kit* (sold separately) or through a wall with a 7⅜″ max. wall thickness. 18505K22 requires a 16 3/16″ Ht. × 26 3/16″ Wd. wall cutout. 18505K24 and K43 require an 18 3/16″ Ht. × 26 3/16″ Wd. wall cutout.

Note: The higher the energy efficiency ratio, the more energy efficient the unit.

Hazardous-Location Air Conditioners

UL listed for Class 1, Division 2, Groups A, B, C, D hazardous locations. These air conditioners have an adjustable temperature control, adjustable louvers for directing airflow, and a slide-out chassis for easy maintenance. Units are single phase, operate on 208-230 VAC, 60 Hz, and have leads for hardwiring. Mount in a window 27⅞″ to 42″ wide or through a wall with a maximum thickness of 6″. 1817K79 requires a 16⅜″ Ht. × 26 3/16″ Wd. wall cutout. 1817K89 requires an 18⅜″ Ht. × 26 3/16″ Wd. wall cutout.

Note: The higher the energy efficiency ratio, the more energy efficient the unit.

Portable Air Conditioners

When things heat up, simply roll these air conditioners to the area that needs cooling. They're air cooled, so they don't require an outside source of water. Units have a built-in pump with two 2.5-gallon condensate tanks and a control panel with off-fan-cool switch. Operate at 60 Hz and have a 6-ft. cord with three-prong plug.

To exhaust air through your duct work, use the included air discharge kit. It fits 24″ wide ceiling tiles and includes duct, flange, and a ceiling tile.

Optional thermostat has a temperature range of 60° to 95° F.

Industrial Duty Fans

All fans are direct drive with a totally enclosed motor that operates at 60 Hz. *115* and *120 VAC* fans are single phase. *208-230/460 VAC* fans are three phase. UL listed.

Premium quality fans have precision-balanced cast aluminum blades for enhanced efficiency and long life. ***High-output*** fans deliver higher cfm per blade diameter than Premium Quality or Valu-Cool. *120 VAC* fans have steel blades. *208-230/460 VAC* fans have galvanized steel blades. ***Valu-Cool*** fans have stamped steel blades.

Premium Quality Fans
- Chrome-plated steel guard
- 15-ft. cord with three-prong plug
- Oscillating fans have a heavy duty gear box and can be fixed or set to oscillate through a 45° or 90° arc

High-Output Fans
- *120 VAC*—12-ft. cord with three-prong plug; gray powder-coated steel guard
- *208-230/460 VAC*—Leads for hardwiring; chrome-plated steel guard

Valu-Cool Fans
- Black powder-coated steel guard
- 10-ft. cord with three-prong plug, unless noted
- Oscillating fans can be fixed or set to oscillate through a 90° arc

Pedestal Premium Quality

Pedestal

All have a solid base and an adjustable-height pedestal. Base and pedestal are black powder-coated steel.

▲ Has 9-ft. cord with three-prong plug.

High-Visibility Fans

The safety yellow guard reduces the chance of accidental contact. These direct-drive fans are nonoscillating and have a single-phase, totally enclosed air-over (TEAO) motor that's cooled by air from the fan. Operate at 60 Hz.

Pedestal fans have rubber wheels for mobility. Height is measured from the floor to the center of the guard. *24″* and *30″ blade dia.* fans adjust from 5 ft. to 8 ft. high. *32″* and *36″ blade dia.* fans are 3′9″ high.

Wall-mount fans have a bracket with 7/16″ dia. holes (fasteners not included).

Standard fans are two speed and have galvanized steel blades and a PVC-coated steel guard. Operate at 115 VAC.

Heavy duty fans are single phase and have cast aluminum blades and a powder-coated steel guard that's supported by a polyethylene ring for more efficient airflow. Operate on 115 VAC but can be field-wired for 230 VAC.

Washdown Fans

Built to hold up in washdown environments, these fans meet UL 507 spray test requirements. All are nonoscillating and direct-drive with a single-phase, totally enclosed motor. Bakery Industry Sanitation Standards Committee (BISSC) certified for food service use.

Pedestal fans are 5 ft. high, measured from the floor to the center of the guard.

Wall-mount fans have a bracket with 1/2″ dia. mounting holes (fasteners not included).

Steel/aluminum fans are white epoxy-painted steel with a zinc-plated steel guard and aluminum blades. Operate on 120 VAC, 60 Hz. FDA compliant for kitchens and food preparation areas. Components are UL recognized. *Type 304 stainless steel* fans are all stainless steel and operate on 115/230 VAC, 60 Hz. Meet USDA standards. Meet ANSI/NSF 51. UL and C-UL listed.

Hazardous-Location Fans

The motor on these direct-drive fans is UL listed for Class 1, Group D and Class 2, Groups E, F, and G hazardous environments. Fans are nonoscillating, single speed, and have a single-phase, 1/4 hp motor. Operate on 115/230 VAC, 60 Hz (6.9/3.5 amps) and have leads for hardwiring. Blades are spark-resistant cast aluminum; guard is chrome-plated steel.

Pedestal fans adjust from 5 ft. to 8 ft. high (measured from the floor to the center of the guard) and have a black-painted steel base and pedestal.

Wall-mount fans have a bracket with 3/8″ dia. mounting holes (fasteners not included).

Ceiling-mount fans have a bracket with 5/16″ dia. mounting holes (fasteners not included).

I-beam-mount fans fit 2″ to 15″ wide I-beams and include all mounting hardware.

For photos of wall-, ceiling-, and I-beam-mount fans, see the previous page.

Jet-Stream Wall-Mount Fans

For a concentrated stream of air that travels two to three times farther than airflow from conventional fans, choose these venturi tube-style fans. They're perfect for cooling a production line or moving air through warehouse aisles.

Fans are direct-drive, single speed, and have a totally enclosed air-over (TEAO) motor that's cooled by air from the fan. Blades are stamped aluminum; housing and guard are steel. Mounting bracket has 11/16″ dia. holes (fasteners not included).

Oscillating fans cover a 75° arc.

115 VAC fans are single phase and have a 12-ft. cord with three-prong plug.

208-230/460 VAC fans are three phase and have a junction box for hardwiring.

	Blade Dia.	cfm	dB @ 25 ft.	rpm	hp		Each
115 VAC, 60 Hz (6 amps)							
Nonoscillating	22″	5,570	68	1,725	1/2	**2138K73**	$826.18

Oscillating	30″	12,000	65	1,800	1	**2138K64**	1,755.86

Long-Reach Wall-Mount Fans

Provide relief to workers loading and unloading trailers on your dock. These fans attach to a pivoting steel extension arm that allows you to direct air where you need it. Fans are nonoscillating, direct-drive, and three speed. They have aluminum blades, a chrome-plated steel guard, and a single-phase, totally enclosed motor. Operate on 115 VAC, 60 Hz (2.2 amps) and have a 5-ft. cord with three-prong plug. Mounting hardware included. UL and C-UL listed.

Optional light kit uses PAR38 and R40 medium screw-base bulbs up to 300 watts (not included; see pages 687-688). UL and C-UL listed.

Blade Dia.	cfm	dB @ 15 ft.	Max. rpm	hp	With 24″ Arm	Each	With 40″ Arm	Each	With 60″ Arm	Each

Optional Light Kit ..... **2102K351** Each $44.64
Replacement Motor ..... **2102K43** Each $78.18

Suspension-Mount Fans

A

B

C

Keep walkways and aisles clear without sacrificing comfort when you suspend these fans from your ceiling. All are nonoscillating, single speed, and have a steel housing, unless noted. Operate at 60 Hz.

Direct Drive— Fewer moving parts to wear out or replace and typically take up less space than belt-drive fans with the same horsepower. Their venturi tube design provides a concentrated stream of air that travels farther than airflow from conventional fans. All have stamped aluminum blades, a steel guard, and a totally enclosed air-over (TEAO) motor that's cooled by air from the fan. Suspend these fans using straight-link steel chain with a minimum 2/0 trade size and 545-lb. work load limit (see page 1399). *115 VAC* fan has a 12-ft. cord with three-prong plug. *208-230/460 VAC* fan has a junction box for hardwiring.

Belt Drive— More efficient than comparably sized direct-drive fans, producing more cfm for the same horsepower. ***High-output*** fans have a steel guard and an open dripproof (ODP) motor (except 2214K55, which has a totally enclosed motor). UL listed. *115 VAC* fans have steel blades, a mounting yoke with 9/16″ dia. holes (fasteners not included), and a 10-ft. cord with three-prong plug. C-UL listed. *230/460 VAC* fans have stamped aluminum blades and a junction box for hardwiring. Housing is high-density polyethylene. Suspend using Grade 70 steel chain with a minimum 1/4″ trade size and 3,150-lb. work load limit (see page 1397).

Hazardous-location fans have spark-resistant stamped aluminum blades, a steel guard, and a motor that's UL listed for Class I, Group D and Class II, Groups E, F, and G hazardous environments. The junction box has connections for hardwiring, so you can wire fans without removing the guard. Suspend using Grade 70 steel chain with a minimum 1/4″ trade size and 3,150-lb. work load limit (see page 1397).

Machine-Mount Fans

Often used to cool transformers, you can mount these single-speed fans directly to machinery that doesn't ordinarily accommodate fans. They have aluminum blades, a galvanized steel guard, and a single-phase, totally enclosed air-over (TEAO) motor that's cooled by air from the fan. Operate on 115/208-230 VAC, 60 Hz and have terminal board connections.

Optional mounting kit includes a bracket and hardware for attaching fans to machinery.

Blade Dia.	cfm	dB @ 6 ft.	rpm	hp	Amps	O'all Size, Dia. × Dp.		Each

Optional Mounting Kit							**1929K81**	68.75

Air-Powered Fans

When you can't use electricity, count on these fans to keep you cool. Air power allows variable speed and reversible airflow. Fans are nonoscillating and have an adjustable-height pedestal. Blades are aluminum. Guard, pedestal, and stand are steel. Air connection is 1/4″ NPS male. Height is measured from the floor to the center of the guard.

18″ blade dia. fan adjusts from 24″ to 35″ high. Air consumption is 5 cfm at 90 psi.

24″ blade dia. fan adjusts from 48″ to 49 3/4″ high. Air consumption is 7 cfm at 90 psi.

Note: Lubricated air is required for proper operation.

Blade Dia.	Max. cfm	dB @ 5 ft.	Max. rpm	hp		Each
18″	2,640	50	1,000	1/8	**1746K15**	$567.88
24″	3,460	50	1,000	1/4	**1746K13**	690.58

Evaporative Cooling Fans

Where air conditioning is impractical, roll out these evaporative fans, also known as swamp coolers. Setup is simple—just connect to your water supply and plug into a power source to start cooling. Fans take in water, which soaks into evaporative pads. When air passes through the pads, the water evaporates to produce cool air. Fans have a leakproof molded plastic housing, casters with plastic wheels, and a single-phase, 1/3 hp, open dripproof (ODP) motor. Operate at 60 Hz and have a 16-ft. cord with three-prong plug. Water connection is 3/4″ GHT.

24″ and ***36″ blade dia.*** fans are direct drive and operate on 120 VAC.

48″ blade dia. fan is belt drive and operates on 115 VAC.

Optional water tank comes in handy when you don't have access to another water supply. Capacity is 50 gallons.

Blade Dia.	cfm	dB @ 3 ft.	Max. rpm (No. of Speeds)	Amps	Overall Size, Ht. × Wd. × Dp.	***Fans***	Each	***Replacement Pads*** No. Req'd.		Each

Portable Direct-Drive Fans

Valu-Cool

Valu-Cool Multi-Mount

Valu-Cool with Tilt Stand

Corrosion Resistant

Wheel these nonoscillating fans wherever you need air circulated. Direct-drive fans have fewer moving parts to wear out or replace than belt-drive fans.

Valu-Cool fans have a totally enclosed motor (except 20445K21, which has an open dripproof motor) and a 10-ft. cord with three-prong plug. Housing and blades are steel; wheels are plastic. UL listed. *Valu-cool* have a steel wire guard. C-UL listed. *Valu-cool multi-mount* have a black epoxy-coated steel guard and a tilt stand that converts to a wall/ceiling bracket with ½″ dia. holes (fasteners not included). You can also suspend them using the included chain and S-hooks. *Valu-cool with tilt stand* allow you to position the fan head and lock it in place. Guard is steel. C-UL listed.

Corrosion-resistant fans have a totally enclosed motor and an 8-ft. cord with three-prong plug. Motor is UL and C-UL listed. Housing is aluminum, guard is black powder-coated steel, and wheels are plastic. *30″ blade dia.* fan has stamped aluminum blades. *36″ blade dia.* fan has galvanized steel blades.

Washdown fan has a totally enclosed air-over (TEAO) motor that's rated IP55 for washdown applications and cooled by air from the fan. Motor has UL recognized components. Fan has a 10-ft. cord with three-prong plug. Housing and guard are steel, blades are cast aluminum, and wheels are rubber. CSA certified.

Jet-stream fans have a totally enclosed air-over (TEAO) motor that's cooled by air from the fan. The venturi tube design creates a stream of air that travels farther than airflow from conventional fans. All have a steel housing and guard, aluminum blades, and rubber wheels. *22″ blade dia.* fan has a 12-ft. cord with three-prong plug. *30″ blade dia.* fan has a junction box.

Premium-quality fans have a totally enclosed motor and must be hardwired. Housing and guard are steel, blades are aluminum, and wheels are plastic. *24″* and *30″ blade dia.* fans have a conduit box. *36″ blade dia.* fan has wire leads.

Hazardous-location fans have a motor that's UL listed for Class I, Group D and Class II, Groups F and G hazardous environments. Have a steel housing and guards, aluminum blades, plastic wheels, and leads for hardwiring.

Heavy Duty Direct-Drive Fans

Built to withstand the most demanding environments, these fans have a heavy gauge steel housing and stand. Direct-drive fans have fewer moving parts to wear out or replace than belt-drive fans. They're single speed and nonoscillating. Blades are cast aluminum; guard is zinc-plated steel. *115/230 VAC* fans are single phase; *230/460 VAC* fans are three phase.

Premium-quality fans have a totally enclosed motor and must be hardwired. *18″* and *24″ blade dia.* fans have a conduit box. *30″* and *36″ blade dia.* fans have wire leads.

Hazardous-location fans have a motor that's UL listed for Class I, Group D, and Class II, Groups F and G hazardous environments. Have leads for hardwiring and a 180° pivoting head.

Portable Belt-Drive Fans

A

B

C

D

Typically more energy efficient than comparably sized direct-drive fans, these belt-drive fans produce a higher cfm for the same horsepower. They're nonoscillating and have wheels for mobility.

High-output fans have an open dripproof (ODP) motor except 2214K65 and K75, which have a totally enclosed motor. Housing, guard, and blades are steel (except 2074K45, which has high-density polyethylene housing and stamped aluminum blades) and wheels are plastic. UL listed. *115 VAC* fans have a 10-ft. cord with three-prong plug. *240/480 VAC* fan has a junction box for hardwiring.

Hazardous-location fans have a motor that's UL listed for Class I, Group D and Class II, Groups E, F, and G hazardous environments. They have a steel housing and guard, stamped aluminum blades, rubber wheels, and a junction box for hardwiring.

Corrosion-resistant fans have an aluminum housing and guard, galvanized steel blades, plastic wheels, and a 10-ft. cord with three-prong plug. *42″ blade dia.* fan has an open dripproof (ODP) motor. *48″ blade dia.* fan has a totally enclosed motor.

U.S. Navy Fan

So rugged and dependable, this direct-drive, all-steel fan meets U.S. Navy specification MIL-F-68F for use on ships. It's two speed, nonoscillating, and adjusts 90° vertically and horizontally. Wall or bench mount using the included bracket with 3/8″ dia. holes (fasteners not included). Fan has a single-phase, open dripproof (ODP) motor and leads for hardwiring. Operates on 115 VAC, 50/60 Hz.

Blade Dia.	cfm	dB @ 3 ft.	Max. rpm	hp	Amps		Each
12″	2,200/1,500	22	1,400	1/15	1	**1936K44**	$212.52

Heat-Recovery Ceiling Fans

Collect warmer air from the ceiling and bring it down to where it's needed. Suspend these fans from a ceiling, beam, or other overhead structure using the included mounting hardware. Blades and housing are plastic.

Fans have a single-phase, shaded pole, open face motor, an adjustable thermostat (60° to 105° F), and 45 ft. of 7½″ dia. flexible vinyl duct. Operate on 120 VAC, 60 Hz and have a 6-ft. cord with three-prong plug. Blade dia. is 6½″; housing dia. is 10″.

cfm	rpm	hp	Amps		Each
For Ceilings Up to 24 ft. High					
250	3,000	1/100	0.7	**1918K14**	$135.45
For Ceilings Over 24 ft. High

Additional Duct (45-ft. Length)				**1918K51**	34.65

Ceiling Fans

All fans have steel blades with a white epoxy finish, a 24″ downrod (unless noted), and leads for hardwiring. They should be mounted on flat ceilings at least 10 ft. above the floor and include mounting hardware and a safety cable for additional support. Fans are nonreversible and have a single-phase, totally enclosed motor. Operate at 50/60 Hz. UL and C-UL listed. ***Three-speed*** fan has a pull chain.

Optional installation kit includes an adjustable brace, two positioning feet, an electrical box, and mounting hardware.

Ceiling Fan Speed Controls

3-amp model

8- and 12-amp models

Convert one or more single-speed ceiling fans to variable speed. These controls have a knob for turning the fan on and off and for adjusting speed from low to high. Connect them to a single-gang switch box using the wire leads. Mounting fasteners are included.

Capacity	120 VAC	Each	277 VAC	Each
3 amps	**2042K58**	$23.09	—	—
8 amps	**2042K59**	54.57	**2042K79**	$65.46
12 amps	**2042K71**	78.46	**2042K73**	94.70

Light Duty Pedestal Fans

Adjust the height of these three-speed fans by raising or lowering the pedestal. Fans have a single-phase, open drip-proof (ODP) motor. Operate on 120 VAC, 60 Hz and have a 6-ft. cord with three-prong plug. Height is measured from the floor to the center of the guard.

Tilt fan is nonoscillating and has a vertically pivoting head. It adjusts from 39″ to 49″ high. Base and blades are steel; guard is chrome-plated steel. UL listed.

Oscillating fan turns through a 90° arc or locks in a fixed position for concentrated airflow. Height adjusts from 28″ to 44¾″. Front guard is steel; rear guard, blades, and base are plastic. ETL listed.

	Blade Dia.	cfm	Max. rpm	hp	Amps		Each
Tilt	18″	2,873/2,549/2,266	1,497	1/5	1.5	20965K65	$106.86
Oscillating	18″	1,970/1,520/1,170	1,000	1/20	1.1	20965K82	52.22

Light Duty Box Fan

Whether you require a window or surface installation, this three-speed fan is easy to move if your needs change.

It has a steel housing, plastic blades and guard, and a single-phase, open dripproof (ODP) motor. Operates on 120 VAC, 60 Hz and has a 6-ft. cord with three-prong plug. Overall size is 24″ Ht. × 21″ Wd. × 6″ Dp. ETL listed.

Optional wheeled stand is made of tubular steel and has plastic wheels for mobility. Stand raises fan 28″ above the floor and allows it to pivot 360°.

Blade Dia.	cfm	Max. rpm	hp	Amps		Each
20″	2,220/1,920/1,530	955	1/25	1.8	2027K34	$33.33
Optional Wheeled Stand					2027K26	35.20

Light Duty Window-Mount Fans

Airflow reverses with the flip of a switch to push stale air out or draw fresh air in. These three-speed fans have side panels that expand to fit your window, enabling you to mount the fan and still close the window. Housing is plastic; guard is steel. Fans are single-phase, operate on 120 VAC, 60 Hz, and have a 6-ft. power cord with three-prong plug. ETL listed. *16″ blade dia.* fan has plastic blades. *20″ blade dia*. fan has steel blades.

Blade Dia.	cfm	Max. rpm	hp	Amps	Overall Size, Ht. × Wd. × Dp.	Max. Wd., Expanded		Each
16″	2,470/1,700/1,360	1,370	1/6	0.8	22″ × 27″ × 8″	34″	2098K23	$79.55

Light Duty Tilt Fans

Tilt the head of these nonoscillating fans to direct air where it's needed. Fans have a steel guard and blades except 24″ blade dia., which has aluminum blades. They're single phase, operate on 120 VAC, 60 Hz, and have a 9-ft. cord with three-prong plug except 24″ blade dia., which has a 10-ft. cord. All are ETL listed except 1907K25. *12″ blade dia*. fans have an open dripproof (ODP) motor; *18″* and *24″ blade dia.* fans have a totally enclosed motor. *24″ blade dia.* fan is C-UL listed.

Multi-mount fans have a versatile steel bracket with a ½″ dia. hole (fastener not included).

Blade Dia.	cfm	Max. rpm (No. of Speeds)	hp	Amps	Overall Size, Ht. × Wd. × Dp.		Each

Light Duty Wall-Mount Fans

Set these three-speed fans to oscillate through a 90° arc or concentrate airflow by locking in a fixed position. Fans are made of impact-resistant plastic with a steel guard. They're single-phase, operate on 120 VAC, 60 Hz, and have a 6-ft. cord with three-prong plug. ETL listed. Mounting hardware included.

Blade Dia.	cfm	Max. rpm	hp	Amps	Overall Size, Ht. × Wd. × Dp.		Each
12″	930/780/620	1,450	1/50	0.4	21″ × 14″ × 16″	1908K53	$45.36

DC Fans

A screw-down base allows you to mount these nonoscillating fans on your benchtop, in your vehicle, or wherever you need cooling. Base is black die cast zinc, blades are aluminum, and guard is chrome-plated steel. Fans are direct-drive with a totally enclosed motor and one lead for hardwiring. Overall size is 9″ Ht.×8″ Wd.×5″ Dp. Mounting fasteners included.

Light Duty Fan Blades

Compact Square Tip

Round Tip

Square Tip

For low-airflow applications, choose these stamped aluminum blades. Rotation is clockwise when viewed from the front of the fan. Cfm is measured at 0″ SP (static pressure).

Compact Square Tip

Blades are just the right size for electrical equipment and appliances. They have an integral hub and include a set screw for mounting to motor shaft.

Blade Dia.	No. of Blades	Pitch	Max. rpm	@ Max. rpm cfm	hp	Bore Dia.		Each

Round Tip and Square Tip

Blades are riveted to a steel center and include a steel shaft collar that installs on either side of the blade. 5/8″ and 3/4″ dia. have a keyway. Round-tip blades are for circulating fans and exhaust fans in low static pressure applications. Square-tip blades (also called condenser-style blades) handle higher static pressure, such as venturi tube fans.

To Order: Please specify shaft collar size (except for 30″ blade dia., which has fixed hub that fits a 1/2″ dia. shaft). For 10″ to 18″ blade dia., specify 1/4″, 5/16″, 3/8″, 1/2″, 5/8″, or 3/4″. For 20″ to 26″ blade dia., specify 1/2″, 5/8″, or 3/4″.

Medium Duty Fan Blades

Four Blade

Six Blade

With a heavier construction than light duty, these blades produce higher airflow. They have a zinc-plated steel hub plate and a carbon steel shaft collar. Rotation is clockwise when viewed from the front of the fan. Cfm is measured at 0″ SP (static pressure). **To Order:** Please specify shaft collar size: 1/2″, 5/8″, 3/4″, 7/8″, 1″, 1 1/8″, 1 3/16″, 1 1/4″, or 1 3/8″.

Heavy Duty Corrosion-Resistant Polypropylene Fan Blades

Made of fiberglass-reinforced polypropylene, these blades are lightweight yet generate high airflow. All have a cast aluminum hub and a keyway. Rotation is counterclockwise when viewed from the front of the fan. Cfm is measured at 0″ SP (static pressure). *12″ to 24″ dia.* blades have two set screws and a 5/8″ bore dia. except 24″, which have a 7/8″ bore dia. *30″ and 36″ dia.* blades require a quick-disconnect (QD) bushing (see 6086K12 on page 1045).

Heavy Duty Cast Aluminum Fan Blades

By far our most durable, these blades are cast aluminum with an integral hub. They're also precision balanced to generate high airflow while running smoothly and quietly. Blade pitch is 12°. Cfm is measured at 0″ SP (static pressure). Rotation is clockwise when viewed from the front of the fan. Furnished with two set screws for mounting to motor shaft.

To Order: Please specify bore diameter from available diameters listed below.

Blade Dia.	No. of Blades	Max. rpm	@ Max. rpm cfm	@ Max. rpm hp	Keyway	Available Bore Dia.		Each

NEMA 48Y Pedestal Fan Motors

Mount one of these single phase, totally enclosed air-over (TEAO) motors directly to a fan column. They're reversible and cooled by air from the fan. They have a permanent split capacitor, thermal overload protection, and a NEMA 48Y frame (unless noted). Operate on 115/230 VAC, 60 Hz and have leads for hardwiring. Service factor is 1.0. Components are UL recognized. CSA certified. Four 10-32 threaded mounting studs extend 1″ for mounting a fan shroud. Mounting bracket on motor base has a 0.53″ dia. hole (fasteners not included). Motors with a 5/8″ shaft dia. have a keyway.

For information about electric motors including service factor, see page 1020.

Note: When selecting a fan blade, be sure the rpm and hp are compatible and the bore size of the blade matches the shaft diameter of the motor.

rpm	hp	Full Load Amps	O'all Lg.	Shaft Dia.		Each

Room Exhaust Fans

Extract stale air and humidity with these exhaust fans. All have a white plastic grille, damper (except 2213K36), and leads for hardwiring.

All fans have a single-phase, permanently lubricated motor and operate on 120 VAC, 60 Hz. UL listed. Mounting fasteners are not included.

For more information about exhaust fans, see page 656.

Styles A and ***D*** have a galvanized steel housing.

Styles B and ***C*** have a black-painted steel housing.

Style D have a fan and light in one convenient unit. Use one screw-base bulb up to 100 watts (sold separately). The fan and light can operate independently or share a switch.

About Exhaust Fans

Air Capacity— To select the exhaust fan that's right for your facility, you'll need to determine the proper capacity. To calculate your rate of air exchange—measured in cfm (cubic feet per minute)—use the formula below. Divide the cubic feet of your facility by how often you want to exchange the air.

For example, if your facility is 12,000 cubic feet and you want to exchange the air every 6 minutes, your cfm would be 2,000.

$$\text{cfm} = \frac{12{,}000 \text{ cubic feet}}{6 \text{ minutes}} = 2{,}000$$

Air Exchange Frequencies	
Type of Facility	**Air Exchange**
Engine Room	Every 1 to 3 Minutes
Boiler Room, Foundry, Laboratory	Every 1 to 5 Minutes
Factory	Every 2 to 5 Minutes
Office, Warehouse	Every 2 to 10 Minutes

Static Pressure (SP)— The amount of airflow resistance created by louvers, dampers, filters, and ductwork. The higher the SP, the greater the pressure against which the exhaust fan operates. Measured in inches of water.

Sones— A loudness measurement for exhaust fans. Use the following chart to convert sones to dB (decibels).

Sones	dB
Less than 9	Less than 60
9 to 13	60 to 65
13 to 18	65 to 70
18 to 50	70 to 84
50 and Up	84 and Up

Ultra-Quiet Room Exhaust Fans

A

B

Keep noise to a minimum with these ceiling/wall-mount exhaust fans. They have a low rpm motor, 1/2″ thick acoustical insulation, and resilient motor mounts for quiet operation while still generating excellent airflow. All have a galvanized steel housing, white-painted steel grille (except Style A, which has a paintable plastic grille), backdraft damper, and leads for hardwiring. Fans have a single-phase, permanently lubricated motor and operate on 120 VAC, 60 Hz. UL listed. Mounting fasteners are included.

Optional variable-speed fan control fits a single gang electrical box (6 amp draw) and has leads for hardwiring. Mounting fasteners included.

Through-the-Wall Exhaust Fans

Interior Wall

Exterior Wall

Mount these fans in your wall to exhaust air and humidity. Grille is white plastic. All fans are single phase and have leads for hardwiring. UL listed.

Interior wall fan has an adjustable sleeve for mounting in walls 3¾″ to 5″ thick and a variable-speed control. Housing is galvanized steel. Motor is open dripproof (ODP) and operates on 115 VAC, 60 Hz.

Exterior wall fans provide ventilation to the outside without the need to cut a hole in the roof or add duct. They adjust to fit walls 4½″ to 9½″ thick and have 3/16″ dia. mounting holes (fasteners not included). Fans have a black-painted steel housing and permanently lubricated plug-in motor. Operate on 120 VAC, 60 Hz.

180 cfm and *270 cfm* fans wire to your wall switch and have a backdraft damper. *470 cfm* fan has a pull chain and an insulated door.

For information about exhaust fans, see page 656.

Direct-Drive Wall Exhaust Fans

A **B** **C** **D** *8″ to 14″ Blade Dia.* **E** **F**

Direct-drive fans have fewer moving parts to wear out or replace and require less space than the same diameter belt-drive fans. All have a steel frame and blades except Styles A, C, and F, which have aluminum blades.

Add an ***optional wall collar*** for easy installation of a louver (sold separately; see page 660). Collars are galvanized steel and support the fan at the correct distance from the louver for optimum performance.

Optional Wall Collar (louver and fan sold separately)

Medium Duty

Styles A, C, and D include a steel guard.

With Totally Enclosed Motor—*24″, 30″* and *36″ blade dia.* fans have leads for hardwiring. *12″, 16″, 18″,* and *20″ blade dia.* fans have ½″ NPT female conduit connections. *8″* and *10″ blade dia.* have both. All have ⅜″ dia. mounting holes except *24″, 30″,* and *36″ blade dia.* fans, which have ⅝″ dia. holes (fasteners not included).

With Open Dripproof (ODP) Motor—Fans have a junction box for hardwiring. Drill mounting holes as needed. UL listed.

Flush Mount with Open Motor—Low profile to fit tight spaces, these fans mount flush to the wall. *8″* to *14″ blade dia.* fans have ¼″ dia. mounting holes; *16½″ dia.* fans have ⅜″ dia. holes (fasteners not included). Motor has UL recognized components and leads for hardwiring.

Heavy Duty

These fans move larger volumes of air than medium duty. All have leads for hardwiring.

With Totally Enclosed Motor—All have ⅝″ dia. mounting holes except 18″ blade dia. fan, which has ⅜″ dia. holes (fasteners not included).

With Hazardous-Location Motor—UL listed for Class I, Group D and Class II, Groups F and G hazardous environments, unless noted. Drill mounting holes as needed.

For information about exhaust fans, see page 656.

Direct-Drive Wall Exhaust Fans with Movable-Blade Louvers

Light Duty

Heavy Duty

Corrosion Resistant

Don't worry about matching the right size louvers with your fan—these one-piece units combine a powerful fan and movable-blade louvers. Louvers are gravity operated and open when air flows through them. Direct-drive fans have fewer moving parts to wear out or replace and usually require less space than the same diameter belt-drive fan.

Light duty fans are for use in environments with minimal static pressure. Frame, guard, and louvers are steel; blades are aluminum. Fans have a totally enclosed motor, leads for hardwiring, and 1/2″ × 1/4″ mounting slots (fasteners not included). *12″* and *16″ blade dia.* fans have dial speed control. *24″* and *30″ blade dia.* fans have a pull chain and UL recognized components.

Heavy duty fans mount through the wall and fit varying wall thicknesses when used with the two included lengths of angled sheet metal. Frame, cabinet, and louvers are galvanized steel; blades are aluminum. Fans have a wire mesh inlet guard, open dripproof (ODP) motor (unless noted), and leads for hardwiring. UL and C-UL listed. Drill mounting holes as needed.

Corrosion-resistant fans have a durable fiberglass housing and polypropylene blades that won't rust, crack, or require painting. Louvers are polypropylene; guard is gray epoxy-coated steel. Fans have a totally enclosed motor and can be hardwired. Drill mounting holes as needed.

■ Totally enclosed fan-cooled (TEFC) motor.

Light Duty Direct-Drive Wall Exhaust Fans

12″ and 16″ Blade Dia.

For everyday exhausting applications, choose these direct-drive fans, which have fewer moving parts to wear out or replace and usually require less space than the same diameter belt-drive fan. All have a steel frame, aluminum blades, and a silver powder-coated steel guard. Fans have a single-phase, totally enclosed motor, leads for hardwiring, and 1/4″ × 1/2″ mounting slots (fasteners not included). Operate on 115 VAC, 60 Hz. Not rated for sones.

12″ and *16″ blade dia.* fans have a dial switch. *22″ blade dia.* fan has a pull chain.

Blade Dia.	cfm	Max. rpm (No. of Speeds)	hp	Amps	Overall Size, Ht. × Wd. × Dp.	Fits Opening Size, Sq.		Each
12″	2,000/1,600/1,150	1,612 (3)	1/10	1.1	17 3/4″ × 17 3/4″ × 5 1/4″	12″ × 12″	**1915K81**	$190.00

Supply/Exhaust DC Fans

When AC power is not practical or available, use one of these reversible DC fans. They have impact-resistant nylon blades and guard, leads for hardwiring, and 1/4″ mounting holes (fasteners not included). Fans have a sealed motor and operate on 12 VDC. They come set up for exhaust but can easily be reversed to supply. Not rated for sones.

Blade Dia.	cfm	rpm	Amps	O'all Dia.		Each
10″	950	2,850	7.9	11 3/16″	**5159T41**	$117.78

16″	2,170	2,750	17.7	16 5/16″	**5159T45**	161.67

Belt-Drive Wall Exhaust Fans

Adjust the belt of these fans to fine-tune the speed and get the exact airflow you need. Fans have leads for hardwiring and 5/8″ dia. mounting holes (fasteners not included).

For information about exhaust fans, see page 656.

Medium duty fans have an open dripproof (ODP) motor. ***Heavy duty*** fans have a totally enclosed motor.

Add an ***optional wall collar*** for easy installation of a louver (sold separately; see page 660). Collars are galvanized steel and support the fan at the correct distance from the louver for optimum performance.

Belt-Drive Wall Exhaust Fans with Movable-Blade Louvers

With the correct-size louvers already matched to the fan, these one-piece units are ready to go. Adjust the belt for proper tension. Housing, blades, and frame are steel; louvers are aluminum. All have leads for hardwiring and 5/8″ dia. mounting holes (fasteners not included). For information about exhaust fans, see page 656.

Light Duty Movable-Blade Wall Louvers

Single Panel

Double Panel

The economical choice for light duty applications. These louvers are gravity operated, so they remain open as long as air flows. All have a flange with 1/4″ Ht. × 1/2″ Wd. slots for surface mounting (fasteners not included). Frame is 3″ deep and made of 19-ga. galvanized steel. Blades are 26-ga. aluminum. Temperature range is –40° to +180°F.

Corrosion-Resistant Movable-Blade Wall Louvers

PVC, Single Panel

Type 304 Stainless Steel

All are gravity-operated, so louvers remain open as long as air flows.

PVC louvers are drop-in mount. Frame is 1 5/8″ deep; blades are 1/16″ thick. Temperature range is 5° to 140°F.

Type 304 stainless steel louvers have a flange with 1/4″ dia. holes for surface mounting (fasteners not included). Frame is 2 3/8″ deep; blades are 26 ga. Temperature range is –20° to +200°F.

Heavy Duty Movable-Blade Wall Louvers

Surface Mount

Recessed Mount

Drop-In Mount

Built to last, these louvers have 24-ga. aluminum blades except louvers 30″ and wider, which have 22-ga. blades. Maximum air velocity is 2500 fpm. Temperature range is –10° to +200° F except motorized units, which have a maximum temperature of 130° F.

To Order Please specify mounting style: surface mount, recessed mount, or drop-in mount.

Surface Mount—Frame and flange mount outside the wall. Flange has 1/4″ dia. mounting holes (fasteners not included). Overall size is 3″ larger than opening size.

Recessed Mount—Frame rests in the wall. The flange has 1/4″ dia. holes for mounting to the outside of the wall (fasteners not included). When the blades close, they're flush with the wall surface. Overall size is 2 7/8″ larger than opening size.

Drop-In Mount—Fit inside a wall or duct. Overall size is 1/8″ smaller than opening size.

Aluminum frame is 0.063″ thick and 1 7/8″ deep except for drop-in mount louvers smaller than 50″ wide, which are 0.05″ thick and have a frame depth of 1 1/2″.

Galvanized steel frame is 14 ga. Surface and recessed mount are 2 3/8″ deep; drop-in mount are 1 1/2″ deep.

Gravity Operated—Also called automatic, these louvers stay open as long as air flows.

Pull Chain—Also called manual, these louvers open and close with a tug on the chain.

Motorized—A motor opens and closes these louvers. It's single phase, operates on 120/240 VAC, 60 Hz, and has leads for hardwiring.

Heavy Duty Fixed-Blade Wall Louvers

Sturdier, more durable construction gives these louvers a longer service life.

Surface-mount PVC louvers have a 1″ wide flange for mounting outside your wall. They're 1¾″ deep and have a 1/8″ thick frame and plastic insect screen. Blades are 1/16″ thick.

Drop-in louvers mount inside your wall. They're 4″ deep and have a built-in bird screen. Blades are designed to direct water away from the louvers.

Extruded aluminum louvers have 0.08″ thick blades.

Galvanized steel louvers have 16-ga. blades.

Fixed-Blade Wall Louvers with Adjustable Register

Louver with Filter

Mount these 4″ deep louvers through an outside wall. Control airflow from the inside by adjusting the register. Louvers have a white powder-coated 20-ga. steel frame and blades and an aluminum insect screen. Flange is 1½″ wide with 1/8″ dia. mounting holes (fasteners not included). Overall size is 3″ larger than opening size.

Louvers with filter include a washable aluminum filter.

Fits Opening Size, Wd. × Ht.	*Louvers*	Each	*Louvers with Filter*	Each	*Repl. Filters*	Each

Wind-Driven Turbine Exhaust Fans

Designed to spin freely with the slightest breeze, these fans create a vacuum that draws out stale air and fumes from buildings and ventilation systems. No electricity is required. Mount fans on your roof away from wind obstructions. Maximum temperature is 150°F.

For information about exhaust fans, see page 656.

Steel exhaust fans have a zinc and aluminum coating for added corrosion resistance except 1992K25 and K27, which are galvanized with a gray painted finish.

Bases for Wind-Driven Exhaust Fans

Made of corrosion-resistant galvanized steel, these bases have a square bottom and round top. All have a 4″ wide flashing flange to simplify installation.

To Order: For slope bases, please specify pitch. To determine pitch, calculate rise divided by run. To do so, measure the run in any increment of 12″. Then measure the rise (see illustration).

(A)	(B)	Ht.	*Flat Bases*	Each	*Curb Bases*	Each	*Slope Bases*	Each

For information about exhaust fans, see page 656.

Roof Exhaust Fans

Roof Curb

Downdraft exhaust fans are more economical than upblast units. They draw air out and then direct it back toward the roof. Fans are all aluminum and include a bird screen.

Upblast exhaust fans are used when exhausting air laden with dirt and other contaminants that you don't want directed back at the roof.

Direct-drive fans have fewer moving parts to wear out or replace than belt-drive fans. *Belt-drive* fans let you adjust fan speed and airflow.

Roof curbs are made of galvanized steel.

Note: SP = static pressure.

(1) Downdraft Direct-Drive Exhaust Fans

Fans have a NEMA 1 rated (indoor use) disconnect switch so power can be turned off during servicing. They have a single-phase, totally enclosed air-over (TEAO) motor, which is cooled by air from the fan, and a junction box for hardwiring. Maximum temperature is 110° F. UL listed.

(2&3) High-Output Downdraft Exhaust Fans

The motor on these fans is mounted out of the way from the exhaust stream to prevent damage from contaminants. Fans have a single-phase, open dripproof (ODP) motor (except 2207K13, which is three phase) and screw terminals for hardwiring. Maximum temperature is 150° F. ETL listed.

Direct-drive fans have a speed control box mounted on the unit that can be relocated for accessibility.

(4&5) Upblast Exhaust Fans

Fans are aluminum and have a single-phase, open dripproof (ODP) motor (except 6905K18 and K19, which are three phase) and a junction box for hardwiring. Maximum temperature is 300° F. UL listed.

Direct-drive fans have a speed control box mounted on the unit that can be relocated for accessibility. ***Belt-drive*** fans are tested to AMCA standards and include a built-in disconnect switch so power can be turned off during servicing.

(6) High-Output Upblast Direct-Drive Exhaust Fans

Butterfly dampers protect these fans from weather, opening with air flow when the motor is turned on and closing when fan stops. Fans have a NEMA 3R rated (indoor/outdoor use with falling liquids) disconnect switch so power can be turned off during servicing. All are steel with cast aluminum blades. They have a three-phase, totally enclosed fan-cooled (TEFC) motor and leads for hardwiring. Fans can also be field-wired to 230 VAC. Maximum temperature is 105° F.

Dampers for Roof Exhaust Fans

Damper

Roof Curb

The blades on these dampers open when your roof-curb mounted exhaust fan goes on and close when it's off, preventing backdraft. They have a galvanized steel frame and aluminum blades for corrosion resistance. Felt seals on the face of the blades ensure quiet closing and better protection from the weather. Dampers fit the base of the roof curb and must be secured to the shelf of the curb with sheet metal screws (not included; see pages 3022-3030). Frame is 19 ga. and 2″ deep; blades are 26 ga. Temperature range is –40° to +180° F. Roof curbs are galvanized steel.

Also Available: Additional damper sizes. Please ask for 8061T999 and specify damper outside dimensions, roof curb inside width (D) and height, and shelf length.

Roof Supply Fans

Fan

Roof Curb

Replace exhausted air from your building with fresh air from outside and reduce the static pressure on your exhaust fan. These fans mount on your roof and include a bird screen and a built-in disconnect switch so power can be turned off during servicing. They're made of aluminum and have a single-phase, totally enclosed air over (TEAO) motor that's cooled by air from the fan and a conduit connection. Operate on 115 VAC, 60 Hz. Maximum temperature is 110° F. Not rated for sones.

Roof curbs are galvanized steel.

Wall Exhaust Fans

Install these direct-drive fans to an outside wall to diffuse air in a 360° pattern. Ideal for areas where you don't have room for a roof-mount unit, these aluminum fans work with or without duct (angle ring sold separately; see 1764K on page 633). Motor is single-phase, open dripproof (ODP), and sealed against contaminants. All have a junction box and operate on 115 VAC, 60 Hz except 18″ dia. fan, which operates on 115/230 VAC. Fans include mounting fasteners. Maximum temperature is 180° F. UL and C-UL listed. For information about exhaust fans, see page 656.

Grilles are steel. ***Louvers*** are aluminum. Blades open when air flows and close when it stops.

Direct-Drive Duct Fans

Plastic

Galvanized Steel

Mount these direct-drive fans at any point along your ductwork. They have a single-phase, totally enclosed air over (TEAO) motor that's cooled by air from the fan. Direct-drive fans have fewer moving parts to wear out or replace and usually require less space than the same diameter belt-drive fan. Operate on 115 VAC, 60 Hz. Max. temperature is 140° F. UL and C-UL listed.

Fans with plastic housing are UV resistant and have a weatherproof seal and terminal block connections.

Fans with galvanized steel housing include a mounting bracket with 3/16″ dia. holes. *Fans with 6-ft. cord* have a three-prong plug.

Also Available: Mounting clamps, sold in pairs. Please ask for 1967K74 and specify your duct diameter.

High-Output Direct-Drive Duct Fans

For high-airflow applications, choose these direct-drive fans. They have spark-resistant cast-aluminum blades and a heavy duty steel housing. Direct-drive fans have fewer moving parts to wear out or replace and usually require less space than the same diameter belt-drive fan. They have a conduit box and operate at 60 Hz. Maximum temperature is 104° F. Flanges have 7/16″ dia. mounting holes (fasteners not included).

Hazardous-location motor is UL listed for Class I, Group D and Class II, Groups F and G hazardous locations. *Note:* Conduit box must be mounted separate from the fan.

Belt-Drive Duct Fans

Adjust the belt to fine-tune motor speed and airflow on these fans. They have a conduit box and mounting flanges with 7/16″ dia. holes (fasteners not included). *115/230 VAC* fans are single phase. *230/460 VAC* fans are three phase.

Fans with steel housing and aluminum blades have four screws on the motor base for easy alignment. Maximum temperature is 175° F. Tested to AMCA standards. ***Hazardous-location motor*** is UL listed for Class I, Group D and Class II, Groups F and G hazardous locations.

Fans with Type 304 stainless steel housing and Type 316 stainless steel blades provide excellent corrosion resistance. Maximum temperature is 200° F.

Duct Booster Fans

A

B

Increase air volume through ductwork to eliminate undue strain on your ventilation system. These fans have a galvanized steel housing; a single-phase, open motor; and leads for hardwiring. Operate on 120 VAC, 60 Hz.

Single-speed fans have aluminum blades except 1850K11 and 1850K22, which have plastic blades.

Two-speed fans have plastic blades.

Optional thermostat adjusts from 40° to 110° F. It has a 6-ft. cord with three-prong plug. Operates on 110 VAC, 60 Hz and is rated for 5 amps.

Crossflow Blowers

Distributing an even pattern of air across the entire length of their aluminum wheel, these blowers provide uniform cooling and ventilating. They have an aluminum housing and Type 430 stainless steel flanges with 1/4″ × 1/2″ mounting slots (fasteners not included). Blowers have a single-phase, thermally protected, shaded-pole motor and leads for hardwiring. Operate on 120 VAC, 60 Hz. Components are UL recognized and CSA certified. Temperature range is 30° to 140° F.

Miniature Blowers

When space is limited, fire up one of these blowers to transfer heat buildup generated by electronic equipment, induction heaters, and high-wattage bulbs. They have a single-phase, open dripproof (ODP) motor and leads for hardwiring. All have an aluminum housing, a galvanized steel wheel, and 1/4″ dia. mounting holes, unless noted (fasteners not included). Wheel rotates clockwise facing the motor side. Blowers operate on 115 VAC, 60 Hz. Inlet is round and outlet is rectangular.

★ SP = static pressure. ♣ Has 5/16″ diameter mounting holes.

Blowers

Steel

Cast Aluminum

For your everyday ventilating and exhausting applications, choose these blowers. Wheel rotates clockwise facing the motor side. Operate at 60 Hz.

Steel Housing— Welded for strength and durability. Blowers have a steel wheel, terminal block, and 3/8″ dia. mounting holes on the base (fasteners not included). Inlet is round. Outlet is rectangular and adjusts to eight positions. Temperature range is –15° to +180° F.

Cast Aluminum Housing— Spark and corrosion resistant. Blowers have a conduit box and 7/16″ dia. mounting holes on the base (fasteners not included). Inlet and outlet are round. Outlet adjusts to four positions. Temperature range is 0° to 150° F.

Blowers with a *totally enclosed fan-cooled (TEFC) motor* have a steel wheel.

Blowers with a *hazardous-location motor* are UL listed for Class I, Group D, and Class II, Groups F and G hazardous locations. All have an aluminum wheel except 1955K64, which has a steel wheel.

ⓘ For performance curves of these blowers, go to mcmaster.com and search for **1963KAC**.

Heavy Duty Blowers

Steel, Rectangular Outlet

Steel, Round Outlet

Cast Aluminum

Type 304 Stainless Steel

When the air you're moving contains light dust or contaminants, these direct-drive blowers get the job done. Wheel is aluminum and rotates clockwise facing the motor side. All blowers have a round inlet. Operate at 60 Hz.

115/230 VAC blowers are single phase. *230/460 VAC* blowers are three phase. *Hazardous-location motor* is UL listed for Class I, Group D, and Class II, Groups F and G hazardous locations.

Steel Housing— Welded for strength and durability. Blowers with *rectangular outlet* adjust to eight outlet positions. They have a conduit box and 3/8″ dia. mounting holes on the base (fasteners not included). Temperature range is –15° to +180° F. Blowers with a *round outlet* adjust to four outlet positions. They have a conduit box and 7/16″ dia. mounting holes (fasteners not included). Temperature range is –15° to +150° F.

Cast Aluminum Housing— Spark and corrosion resistant. Blowers have a conduit box and 7/16″ dia. mounting holes on the base (fasteners not included). Adjust to four outlet positions. Temperature range is –20° to +150° F.

Type 304 Stainless Steel Housing— Superior corrosion resistance. Blowers have a terminal box and 3/8″ mounting holes on the base (fasteners not included). Adjust to eight outlet positions. Temperature range is –15° to +180° F.

ⓘ For performance curves of these blowers, go to mcmaster.com and search for **1953KAC**.

Portable Blowers

Light in weight but heavy on power, these blowers offer go-anywhere convenience. They adjust to three outlet positions (level, 45°, and 90°) and run at three speeds. Housing is blue polyethylene with an easy-grip handle. Blowers have a thermally protected motor that's rated for continuous use and a drying vent under the unit. Operate on 115 VAC, 60 Hz and have a 25-ft. cord with three-prong plug. UL and C-UL listed.

Chemical- and Corrosion-Resistant Blowers

115/230 VAC

208-230/460 VAC

The rigid plastic housing protects these blowers in harsh environments. All have a PVC housing except 2093K11, K12, K13, and K14, which have a fiberglass-reinforced polyester housing. PVC resists strong oxidizing acids such as chromic, nitric, sulfuric, and phosphoric but is not recommended for use with perchloric acid. Fiberglass-reinforced polyester tolerates many organic chemicals. All blowers have a polyurethane-coated steel base with 3/8″ dia. mounting holes (fasteners not included) and a conduit box, unless noted. Motor is direct drive and operates at 60 Hz. Wheel rotates counterclockwise facing the motor side. Inlet is round. Air discharges out of the top. Not rated for temperature or decibels.

115/230 VAC blowers are single phase and have a polypropylene wheel, unless noted. *208-230/460 VAC* blowers are three phase and have a PVC wheel. For duct applications, use an optional round adapter (sold separately) to convert a rectangular outlet to a round outlet.

Hazardous-location motor is UL listed for Class I, Group D, and Class II, Groups F and G hazardous locations.

DC Blowers

Essential where you don't have access to AC service, these blowers run on a DC power source such as your vehicle battery. All have a direct-drive motor, leads for hardwiring, and a polypropylene housing. Wheel is acetal and rotates clockwise facing the motor side. Inlet and outlet are round, so installing flexible duct is easy. Maximum temperature is 130° F. The included mounting bracket lets you rotate the blower to discharge air in any direction. Bracket has 1/4″ dia. mounting holes (fasteners not included).

Portable Air-Powered Blower/Exhausters

With Steel Diffuser

With Polyethylene Diffuser

Using compressed air for power eliminates the need for electricity and the potential for sparks in hazardous locations. These blower/exhausters are powerful enough to be used in ducted applications and have a cast aluminum inlet housing with 3/8″ wide mounting slots except 2002K29, which has 1″ wide slots (fasteners not included). They also include a static grounding cable.

With Steel Diffuser—2002K26 and K29 are galvanized. Temperature range is –40° to +350° F. 2002K11, K12, and K14 have a yellow powder-coated finish for added corrosion resistance. Temperature range is 0° to 350° F.

With Polyethylene Diffuser—Virtually indestructible, it can be flexed back to its original shape if dented. Temperature range is 0° to 160° F. Color is black.

Duct and Accessories

Duct Carrier

Quick-attach PVC-coated polyester duct includes belt-and-buckle connectors—no additional fittings are required.

Neoprene/polyester duct requires connectors (sold separately). ***Steel clamp connectors*** allow you to attach duct to your blower. ***Aluminum couplings*** let you connect multiple sections of duct.

Polyethylene duct carriers hold up to 25 feet of duct.

Quick-Attach PVC-Coated Polyester Duct

High-Output Air-Powered Blower/Exhausters

Powerful enough to ventilate tanks and vessels, these blower/exhausters operate on compressed air—no electricity required. The inlet and outlet flanges are identical, so it's easy to turn the units around and switch from supply to exhaust applications—perfect for use with American Petroleum Institute (API) standard tanks. Flanges have 1″ mounting slots. All blower/exhausters have heavy duty sealed ball bearings and a durable cast aluminum housing and blades. Temperature range is 0° to 150° F.

cfm with 80 psi Air Supply: Discharge w/o Duct	Discharge w/ 50-ft. Duct	Consumption	For Duct Dia.	O'all Size, Dia. × Dp.	Air Supply: Max. psi	Connection, NPT Female	dB @ 5 ft.

Electric Blower/Exhausters

Ducted applications are no problem for these tough blower/exhausters. Connect flexible duct directly to the inlet or outlet. All units have a single-phase motor.

Blower/Exhausters

All have a built-in handle, polypropylene blades, and a totally enclosed air over (TEAO) motor that's cooled by air from the fan. Operate on 115 VAC, 60 Hz.

Steel Housing—These blower/exhausters have a powder-coated finish and a cord with three-prong plug. Temperature range is –10° to +150° F. 1983K1 cord is 6 ft. 1983K5 cord is 20 ft.

Polyethylene Housing—Double walls protect motor and propeller even if outer wall is damaged. Blower/exhausters are stackable for increased airflow or storage. All have a 20-ft. cord with three-prong plug. Temperature range is –20° to +150° F.

High-Output Blower/Exhausters

Move high volumes of air with or without duct attached. These blower/exhausters have a rolled steel and cast aluminum housing. Motor operates at 50/60 Hz. Temperature range is 0° to +150° F. Units rest on the floor with the built-in base or mount on the optional pivoting tripod stand (sold separately). *¾-hp* units have glass-filled polyester blades. *1-hp* units have cast aluminum blades.

Totally Enclosed Fan-Cooled (TEFC) Motor—All have a 15-ft. cord. *115 VAC* units include three-prong plug. *230 VAC* units can be hardwired or add your own plug.

Hazardous-Location Motor—All have a junction box for hardwiring. Motor is UL listed for Class I, Division I, Group D, and Class II, Division I, Groups E, F, and G hazardous locations.

With Optional Pivoting Tripod Stand

For information about static pressure (SP) and decibels (dB), see page 656.

Premium Quality Fume Exhausters

A step above most fume exhausters, these are made of superior materials and have a variety of mounting options—mount them to a wall, bench, or floor. They have rubber pads on the base that help reduce vibration on uneven surfaces, and a foam-grip handle for portability. Motors are totally-enclosed, fan-cooled (TEFC). Furnished with a flexible 10-ft. wire-reinforced polypropylene hose and a nozzle that you can attach to either the inlet or outlet. Have six 7/16″ dia. mounting holes (fasteners not included).

115 VAC, 60 Hz, Single Phase—1/4-, 1/2-, 3/4-, and 1-hp units have an 8-ft. cord with three-prong plug and an on-off switch. 1 1/2- and 2-hp units have six wire leads for hardwiring.

230/460 VAC, 60 Hz, Three Phase—Have nine wire leads for hardwiring.

High volume exhausters are for short, straight runs of duct. They have a cast aluminum housing and a steel wheel.

High pressure exhausters are for longer runs with bends or turns. Housing is 14-ga. steel and wheel is cast aluminum.

Optional *dual-duct kits* each have two hoses (4″×5 ft. for 2154K62; 6″×10 ft. for K42), two nozzles (5″×5″ for 2154K62; 7″×7″ for K42), a Y connector, and four clamps.

Fume Exhausters

Floor Mount

Wall Mount

Designed for continuous use in light-to-medium duty applications, these exhausters remove vapors, fumes, and fine dust particles. Housings are 26-ga. galvanized steel. Motors operate on 115 VAC, 60 Hz. Bases are steel and have four 0.281″ dia. mounting holes (fasteners not included).

Floor mount exhausters have a 1/3-hp motor, 6″ dia. inlet, and 6″ dia. outlet.

Wall mount exhausters have a 1/4-hp motor, 4″ dia. inlet, and 4″ dia. outlet. Units have a mounting panel that installs through the wall.

Open dripproof motor (ODP) exhausters have a steel wheel and an opening to receive a 1/2″ conduit connector.

Hazardous location motor exhausters have a stamped aluminum wheel and seven 18″ wire leads for hardwiring. Motor is UL listed for Class I, Groups C and D; Class II, Groups E, F, and G.

Suspended Hood Fume Exhausters

Position the hood of these exhausters directly over drums, distillers, and tanks to vent fumes at the source. You can vary the hood's height or use an optional swivel bracket to swing it out of the way. Optional swivel brackets have three 3/8″ dia. mounting holes (fasteners not included).

Exhausters operate on 115 VAC, 60 Hz and have a 6″ cord with three-prong plug. Furnished with spun aluminum hood, blower, counterbalance, 10 feet of 6″ dia. duct, installation kit, and outside vent kit.

Also Available: Hazardous location exhausters. Operate on 115/230 VAC, 60 Hz, single phase and have seven 6″ wire leads for hardwiring. Motor is UL listed Class 1, Group D and Class 2, Groups F and G. Please ask for 21105K78 and specify hood diameter.

Bench-Top Fume Exhausters

A compact hood draws fumes away from your workbench while the carbon-impregnated filter absorbs 80% of contaminants. Exhausters have a polycarbonate housing and work well for soldering jobs. Hood is 8″ Ht.×8 1/4″ Wd.×6″ Dp. Exhausters operate on 115 VAC, 50/60 Hz, 0.14 amps and have a 6-ft. cord with three-prong plug. Not rated for dB.

Static dissipative exhausters have a static dissipative housing.

Tilt Base—The base rests on your bench top.

Adjustable Arm—Have a 24″ long arm that's made of painted steel. Exhausters have a clamp with 2 1/2″ adjustment range for bench mounting.

	cfm	Exhausters with Tilt Base	Each	Exhausters with Adjustable Arm	Each

Replacement Filters (Pkg. of 3)		4518T49	Pkg.	$22.71	

Fume Exhauster Arms with Duct

Position these arms at the source of fumes. Arms come with self-supporting duct, a collection hood/nozzle, and mounting brackets (fasteners not included). Blowers are sold separately on pages 666-668.

A Compact design makes this arm suitable for workbench use. A 360° swivel bracket allows exact positioning. Arm has a fiberglass/PVC hose and powder-coated aluminum suction hood.

B Arms have a large diameter for high-volume fume extraction. Mount on wall or ceiling. Hood flange swivels for arm positioning. The 4″ dia. units have a Santoprene suction hose and aluminum hood; 6″ and 8″ dia. units have a neoprene-coated cotton/polyester suction hose and steel hood.

C Arm extends from 3.3 to 6.6 feet to reach a large working radius. For high-volume use in low ceiling/confined space areas. Suction hose is PVC-coated woven polyamide. Hood is anodized steel with plastic collar.

★ Extends to 6.6 feet.

For information about static pressure (SP) and decibels (dB), see page 656.

Exhaust Hose Support Extension Arms

Move these versatile extension arms in and out, up and down to position exhaust duct where you need it. They're made of plated steel tubing and have cast aluminum fittings. Each arm has four 9/32″ dia. mounting holes for bench or wall mounting (fasteners not included).

Furnished with wire ties for securing hose to arms. For hose, see pages 222-233; for blowers, see pages 666-668.

Adjustable model has heavy cast aluminum joints and fittings that allow the arm to "lock" into position.

Counterbalanced with removable arm models have two steel tension springs to keep arm in place. Removable extension arms offer greater reach.

Counterbalanced with adjustable arm model has three steel tension springs and an arm that extends from 3 to 9 feet for extra reach.

Fume Control Cabinet

In addition to temporarily storing your commonly used chemicals, this cabinet prevents chemical-vapor odors from affecting your facility. Simply choose the pair of filters (sold separately) you need to handle your specific vapor odor problem.

Cabinet has a 22-ga. galvanized steel housing with an epoxy-polyester anti-acid coating. It operates on 115 VAC, 60 Hz and includes an 8-ft. cord with three-prong plug.

Cabinet has four 1/2″×1/8″ mounting holes (fasteners not included), so you can mount it directly to your bench top or work table. *Optional wall-mount bracket* has three 1/4″ dia. mounting holes (fasteners not included).

				Each
Optional Wall-Mount Bracket			4422T32	$47.42

Fume Exhaust Hoods

Chemical-resistant, one-piece molded low-density polyethylene (LDPE) shell has rounded inside corners for easy cleaning. Hoods have a clear acrylic sliding panel that allows for open, closed, and partially open use. The closed position has a small gap for continuous air flow. Blowers are sold separately on pages 666-668.

cfm @ 0″ SP	Ht.×Wd.×Dp.	Front Opening, Ht.×Wd.	Outlet Dia.		
200	22″×27″×13″	12″×22″	4″/6″	20995K61	$470.54

About Calculating the cfm Required for Air Cleaning

Follow these steps to calculate the cfm you need in an air cleaner:

1. Determine the cubic feet (cu. ft.) of your facility (Lg.×Wd.×Ht.).

2. Decide how many air changes per hour you need. The air is typically changed 6 to 8 times per hour in industries such as metal working, welding, woodworking, and plastics.

3. Use this formula:

[Cu. ft. of facility×No. of air changes per hour] ÷ 60 min. = cfm

Example: Suppose you want to change the air 6 times per hour in a 30-ft. Lg.×30-ft. Wd.×10-ft. Ht. facility.

1. 30 ft.×30 ft.×10 ft. = 9,000 cu. ft.

2. 6 changes per hour.

3. [9,000 cu. ft.×6]/60 min. = 900 cfm

To change the air 6 times per hour in a 9,000 cu. ft. facility, you need an air cleaner with a capacity of at least 900 cfm.

Portable Air Cleaners

A carrying handle makes it easy to take these compact, lightweight cleaners right to the source of contaminants. A spark trap catches heavy particles, while a replaceable HEPA filter removes even finer particles (99.97% efficient for particles as small as 0.3 microns). If you work with smelly fumes, add the optional odor filter. Housing is 20-ga. polyester-coated steel. Cleaners come with a prefilter, a HEPA filter, a 10-ft. rubber hose with polyester reinforcement, flexible tube, intake nozzle, magnetic base to hold tube in place, and a 10-ft. cord with three-prong plug. Operate on 120 VAC, 60 Hz. Size is 12″ Ht.×27″ Wd.×12″ Dp. UL listed. Cleaners are compliant under all state air cleaner rules in effect on November 1, 2010.

Optional auto start/stop plugs into an electrical outlet and turns unit on/off by sensing current on the cable. A delay switch keeps the motor running 5-20 seconds after unit turns off to purge any remaining fumes. Operates on 120 VAC, 60 Hz, 0.11 amps. Has a 6-ft. cord with three-prong plug.

Combination Portable/Bench-Mount Air Cleaner

This air cleaner takes on many tasks. When used upright, it's a mobile fume cleaner that captures fumes at their source. It also has two flexible, self-supporting polypropylene extractor arms and a detachable caster base with four 2″ dia. casters. Housing is 18-ga. enamel painted steel. Cleaner is compliant under all state air cleaner rules in effect on November 1, 2010.

Also use this cleaner as a downdraft system (contaminants are drawn down into the unit) by using the slotted inlet cover in place of the arm assembly.

Cleaner in upright position.

Cleaner in bench-top position with acrylic hood and outlet deflector.

For bench-top use, lay the unit on its side. You can attach the acrylic hood and use it as a fume cleaning booth. An adjustable outlet deflector directs exhaust flow out of your way.

Cleaner has a 350-watt motor that operates on 120 VAC, 60 Hz, 2.8 amps. Furnished with a 7-ft. cord with three-prong plug and polyester prefilters. Main filters and odor after-filter are sold separately.

Air Cleaners

For information about calculating the cfm required for air cleaning, see page 671.
For information about static pressure (SP) and decibels (dB), see page 656.

Portable Room Air Cleaners

Small enough to be moved from room to room, yet large enough to be effective. Cleaners operate on 120 VAC, 60 Hz. Styles A and C are UL listed.

A Cleaner has three speeds and comes with disposable HEPA and odor filters. Housing is white ABS plastic. Supplied with a 5-ft. cord with two-prong plug. Cleaner is compliant under all state air cleaner rules in effect on November 1, 2010.

B&C Cleaners have two speeds and come with a washable electrostatic filter and a disposable odor filter. Housings are 18-ga. steel with a woodgrain vinyl finish. Furnished with a 5′9″ cord with three-prong plug. Cleaners are compliant under all state air cleaner rules in effect on November 1, 2010 except in California.

Portable Heavy Duty Air Cleaners

Move these cleaners wherever you need to improve indoor air quality. The 500 cfm unit has a 20-ga. Type 304 stainless steel housing; all other units have a 16-ga. galvanized steel housing with four 5″ dia. wheels for easy transport. All operate on 120 VAC, 60 Hz. Cleaners have three speeds and an 8-ft. cord with a three-prong plug, except the 4,000 cfm unit, which is single speed and has a 15-ft. cord with a three-prong plug. UL listed. All include a prefilter, a secondary filter, and a HEPA filter that collects 99.97% of particles as small as 0.3 microns.

Standard— Cleaners are compliant under all state air cleaner rules in effect on November 1, 2010 except in California.

Cleaners for Gas— Furnished with a filter (required) for either diesel or nonpetroleum-based gases such as acetone, alcohol, toluene, and hydrogen sulfide.

Standard— Open Dripproof Motor (ODP)

T-Bar Ceiling-Mount Room Air Cleaners

Save valuable floor space in your facility—cleaners are designed to mount in a 2′×4′ grid of a T-bar type ceiling. Housings are 14-ga. steel. All have two speeds; operate on 120 VAC, 60 Hz; and have three 4″ wire leads for hardwiring. Overall size is 23¾″ Lg.×47¾″ Wd.×11″ Ht. Cleaners are compliant under all state air cleaner rules in effect on November 1, 2010 except in California.

All cleaners come with a washable prefilter that should be cleaned frequently to maintain maximum performance. The 900 cfm unit has a disposable HEPA filter with a built-in carbon odor filter. The 1,000 cfm unit includes a disposable carbon odor filter and a washable electrostatic filter. The disposable filters should be replaced regularly.

High-Volume Ceiling-Mount Air Cleaners

Space-saving and effective, these cleaners suspend from your ceiling and remove 99% of air particles 5 microns and larger. They remove 91% of air particles as small as 1 micron. Housings are 20-ga. steel. Operate on 115 VAC, 60 Hz. Furnished with 6-ft. cord with three-prong plug. Mounting hardware (eyebolts) is included. The optional odor filters are perfect for finishing work. Cleaners are compliant under all state air cleaner rules in effect on November 1, 2010 except in California. 916 cfm unit has three speeds and comes with a radio frequency remote control and one 9V battery. Housing has a powder-coated finish. 1,250/800 cfm unit has two speeds and a pull switch. Housing has a painted finish.

★ Optional; can be used in place of the filter that comes with the air cleaner. ● Furnished with the air cleaner.

Mist Collectors

Collect oil and coolant mist from machining operations while cleaning the air. These collectors have three-stage filtration that centrifugally separates and removes mist particles from the air stream. Filters are replaceable and are 98% efficient for particles larger than 1 micron. Collectors are 16-ga. steel and have a three-phase, totally-enclosed, fan-cooled (TEFC) motor with twelve 6″ wire leads for hardwiring. Operate on 208/230/460 VAC, 50/60 Hz. All have four 9/16″ dia. holes for mounting directly on machinery (fasteners not included). Collectors are compliant under all state air cleaner rules in effect on November 1, 2010.

Portable Room Humidifiers

3 Gallon

9 Gallon

Small enough to move from room to room, these evaporative humidifiers add cool, invisible moisture to the air without producing white dust. Just fill the reservoir with water and refill as necessary to reach daily capacity. All are three speed and include one evaporative filter. Operate on 120 VAC, 60 Hz and have a 6-ft. cord with two-prong plug. UL listed.

9-gallon humidifier has casters for mobility.

Steam Humidifiers

Free-Standing/ Duct Mount

Wall Mount

Electrical heating elements in these humidifiers boil water to generate steam.

Free-Standing/Duct Mount— Has a Type 304 stainless steel cabinet. Includes a low-water safety cutoff switch, built-in overflow protection, remote humidity control, and installation kit. May be connected to 12″×12″ square duct. Operates on 120 VAC, 60 Hz, 14 amps and has a 5-ft. cord with three-prong plug. Use 1/4″ copper tubing to hook up water supply. UL listed.

Wall Mount— Has a gray and white polycarbonate cabinet. Includes a built-in blower pack to accelerate humidity distribution and a cylinder to trap mineral deposits, white dust, and residue. Operates on 115 VAC or 208-240 VAC, 60 Hz, 12.7 amps, single phase, and has terminal block connections for hardwiring. Capacity varies depending on voltage from 11.5 gal./day (115 VAC) to 23 gal./day (240 VAC). Use 1/4″ copper tubing to hook up water supply. Requires a humidistat (sold separately). UL listed.

High Capacity Fine-Mist Humidifiers

Four Head

Multiple spray heads on these humidifiers cover wide areas—excellent for large rooms in textile, paper, printing, and industrial plants and warehouses. Spray nozzles tilt and swivel for optimum dispersion of moisture. Spray gun has a fluid control knob to regulate the flow of moisture. Humidifiers operate on 120 VAC, 60 Hz, 0.2 amps and have a 6-ft. cord with three-prong plug.

Humidifiers have 1/4″ NPT male threaded connections for water and compressed air (water connection and minimum 60-70 psi air pressure are required). They also have an air pressure gauge and regulator. Each spray head requires 1/2 cfm @ 40 psi air pressure.

Fine-Mist Room Humidifier

Introduce humidity directly into a room by mounting this atomizing unit behind a wall or to the side of your forced-air system return duct. It emits moist air through its nozzle. Humidifier has an ABS reservoir and polyethylene dome for corrosion resistance. Motor is thermally protected and permanently lubricated. Operates on 120 VAC, 50/60 Hz, 0.6 amps and has two 4″ wire leads and a ground screw for hardwiring. Use 1/4″ copper tubing to hook up water supply. Unit has humidity control and a 1/2″ ID brass nipple drain.

Furnished with a hole template (for duct mounting), a mounting bracket, mounting hardware, and instructions.

Capacity, gal./day	Effective Vol., cu. ft.	O'all Size, Dia.×Ht.		
6	9,600	10 1/2″×12″	2165K14	$281.01

Storage Space Dehumidifiers

Remove moisture in small places, such as storage areas, tool rooms, and cabinets. Made of aluminum, these compact units warm and dry the air to create constant circulation and prevent air from becoming stagnant. Just plug in—no need for messy chemicals or emptying water reservoirs. Operate on 120 VAC, 50/60 Hz and have a 10-ft. cord with two-prong plug. Mounting hardware is included. UL listed.

Length	Amps

Portable Room Dehumidifiers

6¼ Gallon

Remove moisture from moderately damp areas with these dehumidifiers—they have casters, so you can roll them wherever you need them. Cabinets are ABS plastic. Removal capacity is based on 80°F and 60% relative humidity (RH). Humidity control adjusts RH between 35-85%.

Units have automatic overflow shut-off and automatic frost control that shuts off the compressor when room temperature falls below a minimum temperature while a fan blows warm air on the coil. Dehumidifiers operate on 115 VAC, 60 Hz and have a 6-ft. cord with three-prong plug. Water may be collected in the reservoir or drained directly through a 9/16″ ID×8″ Lg. clear plastic hose (included). Temperature range is 41° to 90°F. UL listed.

Portable Heavy Duty Dehumidifiers

Steel Housing 7¼ Gallon

Steel Housing 13⅛ Gallon

Polyethylene Housing 8 Gallon

Powerful compressors and fans enable these dehumidifiers to remove large quantities of moisture from the air. Wheels and handles allow easy mobility. Hot gas defrost feature prevents freeze-up in temperatures as low as 33°F. Removal capacity is based on 80°F and 60% relative humidity (RH). Operate on 115 VAC, 60 Hz and have a 25-ft. cord with three-prong plug. Dehumidifiers have an internal pump-out system. Water drains through the included hose.

Powder-Coated Steel Housing—Drain hose is 25 ft. long. Maximum temperature is 105°F.

Polyethylene Housing—Unit includes a filter. Drain hose is 40 ft. long. Maximum temperature is 100°F. UL listed.

Desiccant Canisters

Aluminum

Compact, perforated canisters absorb moisture in glass jars, airtight cans, plastic pouches, and tool boxes. They contain silica gel that changes from blue to pink when absorption capacity is reached. Silica gel absorbs up to 21% of its weight in moisture at 40% relative humidity (RH). To reactivate, heat in a 300°F oven for three hours. Plastic canister can also be heated in a 900-watt microwave in three minute intervals until silica gel color returns to blue.

Aluminum Canister—Has a window in the center, so you can monitor color change.

Plastic Canister—Canister material is see-through, so you can monitor color change.

Effective Volume, cu. ft.	Lg.×Wd.×Dp.	Wt., oz.		
Aluminum Canister				
3	4.0″×2.1″×0.57″	1.4	2219K91	$12.41
Plastic Canister				
3	4.2″×2.6″×0.64″	1.4	2219K92	30.23

Humidity Indicating Cards

A fast and easy way to find out the humidity of a container and other enclosed areas. These cards have three spots that indicate 30, 40, or 50% relative humidity (RH). Card is 3″ Ht.×2″ Wd. Package quantity is 100.

2175K11 ..... **Pkg.** $18.23

Desiccant Bags

Great for removing humidity from sealed containers during shipping and storage. Effective volume is calculated at 77°F and 40% relative humidity (RH), unless noted. Generally Recognized As Safe (GRAS) by the FDA, except for indicating silica gel and low-humidity molecular sieve.

Silica Gel—Absorbs up to 21% of its weight in moisture and works best when RH is higher than 40%. FDA CFR 21 compliant. Enclosed in tear-resistant Tyvek bags.

Indicating Silica Gel—Absorbs up to 21% of its weight in moisture. When the silica gel absorbs 8% of its weight, it changes from blue to pink. Bags have a window, so you can monitor color change. Enclosed in tear-resistant Tyvek bags. Should not be used in contact with food products.

Low-Humidity Molecular Sieve—Absorbs up to 20% of its weight in moisture. This desiccant is especially effective in low humidity (below 40% RH) and/or where temperatures exceed 77°F. Enclosed in tear-resistant Tyvek bags.

Clay—Absorbs up to 17% of its weight in moisture. FDA CFR 21 compliant. Enclosed in tear-resistant Tyvek bags.

Anhydrous Calcium Sulfate—Absorbs up to 6% of its weight in moisture. Enclosed in kraft paper bags.

♣ Bags are 1.9″ Lg.×1.0″ Wd. Weight is 0.12 oz.
♦ Effective volume is calculated at 100°F and 100% RH.

Desiccant Cylinders

Perforated aluminum cylinders are great for absorbing humidity in closed compartments. To reactivate desiccant, just heat in an oven; heat for one hour at 425° F for 2202K67 and two to three hours at 450° F for 2202K66. Cylinders contain anhydrous calcium sulfate that absorbs 6% of its weight in moisture.

Effective Volume, cu. ft.	O'all Size, Dia. × Lg.	Wt.		
6	1½″ × 6″	5.3 oz.	2202K67	$24.28
200	4½″ × 16″	10 lbs.	2202K66	50.88

Large Container Desiccants

Protect cargo sent in large containers by truck, railroad, or ship for up to 90 days. Just place these 125-gram bags on top of cargo or on the floor, and they'll prevent condensation from forming. Bags are 5¾″ × 10¼″. They absorb up to 200% of their weight in moisture at 77° F and 80% relative humidity (RH). Made of starch and calcium chloride mixture. 32 bags are recommended for a 20-ft. shipping container; 64 bags are recommended for a 40-ft. container.

Self-adhesive bags come in strips of six bags. Ideal for fitting into the grooves of container walls where desiccants are protected from forklift damage.

Standard			Self Adhesive		
Bags Per Pkg.		Pkg.	Bags Per Pkg.		Pkg.
4	2228K6	$18.70	6	2228K7	$37.41
32	2228K8	90.07	36	2228K9	175.40

Bulk Desiccants

Use these desiccants alone or with moisture-barrier bags.

Silica gel absorbs 23% of its weight in moisture at 40% relative humidity (RH). To reactivate, heat in a 256° F oven for 12 hours. Color is white.

Indicating silica gel changes from blue to pink when it has absorbed 6% of its weight in moisture. Silica gel can absorb 23% of its weight in moisture at 40% RH. To reactivate, heat in a 256° F oven for 12 hours.

Clay absorbs 17% of its weight in moisture at 40% RH. To reactivate, heat in a 220° F oven for 12 hours. Color is white.

Wt.	Silica Gel		Indicating Silica Gel		Clay	
1 lb.	2181K91	$8.91	2181K93	$14.38	2181K75	$14.47

10 lbs.	2181K98	66.88	2181K97	89.38	2181K77	84.40

Desiccant Containers and Cartridges

Container *Cartridge*

Store materials and keep them dry at the same time. These compact, shatterproof containers can hold a vacuum of 29″ Hg for 24 hours. Top is clear polycarbonate to allow inspection of the material; bottom and release valve are white polypropylene. You need both the ***container*** and the ***desiccant cartridge***, each sold separately. The cartridge fits in the bottom of the container and holds the indicating silica gel that changes from blue to pink when maximum absorption is reached. The silica gel absorbs 30% of its weight in moisture at 70% relative humidity (RH). To reactivate, heat in a 300° F oven for three hours or until silica gel color returns to blue.

Electrostatic Panel Air Filters

An inherent electrostatic charge draws pollen and other particles onto multiple layers of woven polypropylene and one layer of nonwoven polyester. Frame is aluminum, unless noted. These reusable filters are washable and meet UL Class 2 flame retardance requirements. Maximum temperature is 285° F, unless noted.

Actual length and width are ⅜″ less than trade size shown, unless noted.

● Has a galvanized steel frame; actual length and width are ½″ less than trade size shown. Maximum temperature is 200° F.

Fiberglass Panel Air Filters

These filters are perfect as replacements for original filters in HVAC equipment. Frame is fiberboard with two struts bonded on each side (unless noted) for reinforcement and sealed corners to prevent dust leakage. Filters are marked with size and airflow direction. Meet UL Class 2 flame retardance requirements. Max. temperature is 180° F. Pkg. qty. is 12.

Standard

Actual length and width may be up to ⅜″ less than trade size for ½″ and 1″ thick filters and up to ⅝″ less than trade size for 2″ thick filters.

♦ Has a steel grid bonded to one side for reinforcement.
▲ Has a steel grid bonded to both sides for reinforcement.
■ Has one strut bonded to each side for reinforcement.

Custom

Don't see fiberglass air filters in the size you need? We'll get them for you. Just multiply the length × width you need to determine square inches. Then, see sq. inch ranges below for pricing. Minimum filter size for prices listed is 4″ × 4″. Maximum filter size for prices listed is 23″ × 30″. Filters are actual size. Frames have a steel grid bonded to each side for reinforcement, except for 1″ thick filters that are 12″ wide or less, which have a steel grid bonded to one side.

To Order: Please specify length and width.

Also Available: ½″ thick filters and larger sizes. Please ask for 3884T999 and specify thickness, length, and width. ½″ thick filters that are 12″ wide or less have a steel grid bonded to one side.

Poly-Coated Fiberglass Panel Air Filters

Trap more dust particles than fiberglass filters—the media in these filters is polyester-coated fiberglass. The frame is made of fiberboard and has two tin-plated steel grills (one bonded to each side) as well as sealed corners to prevent dust leakage. Filters are marked with size and airflow direction. Actual length and width are 3/8″ less than trade size shown, unless noted. Filters meet UL Class 2 flame retardance requirements. Maximum temperature is 180°F. Package quantity is 12.

High-Temp. Expanded Galvanized Steel and Stainless Steel Air Filters

Galvanized Steel

Type 304 Stainless Steel

These filters have an expanded, corrugated mesh that increases dust and dirt holding capacity. All are 2″ thick. Actual length and width are 1/2″ less than trade size shown. These reusable filters are washable and meet UL Class 2 flame retardance requirements.

Galvanized Steel—Maximum temperature is 425°F. Optional handles are sold separately.

Type 304 Stainless Steel—Maximum temperature is 900°F. Furnished with stainless steel handles.

Polyester Bag Air Filters

The pockets in these bag filters form a tubular shape that allows even air flow with minimal pressure drop. The results are even loading and long filter life. Filters are supported by a galvanized steel frame. Actual length and width are 5/8″ less than trade size shown. Maximum temperature is 175°F.

For information about MERV (Minimum Efficiency Rating Value) ratings, see page 677.

Expanded Aluminum Panel Air Filters

Multiple layers of expanded, corrugated aluminum sheets are stacked in staggered directions to let dust and dirt deep into the filter. Filters are reusable; clean with steam or hot water spray. Meet UL Class 2 flame retardance requirements.

Light Duty Filters—Frame is 0.019″ thick aluminum, unless noted. Max. temp. is 240°F.

Heavy Duty Filters—Frame is 0.040″ thick aluminum to handle rugged conditions. Maximum temperature is 250°F.

Light Duty—Actual length and width are 3/8″ less than trade size

Custom Heavy Duty—Actual Size

Don't see a heavy duty aluminum panel air filter in the size you need? We'll get it for you. Just multiply the length×width you need to determine square inches. Then, see sq. inch ranges below for pricing. **To Order:** Please specify length and width.

Also Available: Filters 600 sq. in. and larger. Please ask for 2150K999 and specify thickness, length, and width.

Polyester Wire-Reinforced Air Filters

A wire grid provides a snug fit. These filters have a continuous seal around their outer edge. All are 2-ply; one media layer is dry, and the other is tacky. Thickness is 1″. Actual length and width are 5/8″ less than trade size shown. Filters have a MERV (Minimum Efficiency Rating Value) efficiency rating of 7. (For information about MERV ratings, see page 677.) Max. temp. is 220°F.

About Air Filter Efficiency

ASHRAE (American Society of Heating, Refrigeration, and Air-Conditioning Engineers) standards 52.1 and 52.2 are used to define an air filter's efficiency. For filters tested in accordance with one or both of these standards, we list an efficiency rating as described below. *Note:* It's common for lower efficiency filters (disposable, washable, and electrostatic) not to have published efficiency ratings.

MERV stands for minimum efficiency rating value. The larger the MERV number, the more efficient the filter.

Dust spot efficiency describes a filter's ability to remove naturally occurring atmospheric dust.

Arrestance describes the percentage of test dust, by weight, that a filter is able to capture.

MERV Rating	Dust Spot Efficiency	Arrestance	Micron Size of Contaminant	Typical Air Filter
1	<20%	<65%	>10 microns (pollen, sanding dust, spray paint dust, carpet fibers)	***Disposable—*** Fiberglass or synthetic panel ***Washable—*** Aluminum mesh or foam panel ***Electrostatic—*** Self-charging panel
2	<20%	65-70%		
3	<20%	70-75%		
4	<20%	75-80%		
5	<20%	80-85%	3-10 microns (mold, spores, cement dust)	Pleated
6	<20%	85-90%		
7	25-30%	>90%		
8	30-35%	>90%		
9	40-45%	>90%	1-3 microns (lead dust, milled flour, coal dust, auto emissions, welding fumes)	Bag, Box, Pleated
10	50-55%	>95%		
11	60-65%	>95%		
12	70-75%	>95%		
13	80-90%	>98%	0.3-1 microns (bacteria, most smoke, insecticide dust, most paint pigments)	Bag, Box
14	90-95%	>98%		
15	>95%	N/A		
16	N/A	N/A		

Pleated Panel Filters

Designed for long life and reduced maintenance, these pleated 100% synthetic fiber filters provide greater surface area and higher efficiency than standard flat panel filters without reducing airflow. The filter media is bonded to a galvanized steel support grid that prevents sagging and air bypass. The grid is installed in a cardboard frame that's treated to handle humidity. Filters are marked with trade size and airflow direction. Actual length and width are ½″ less than trade size shown, unless noted. Meet UL Class 2 flame retardance requirements. Maximum temperature is 225° F.

For information about air filter efficiency ratings, see page 677.

Odor-Removal Panel Air Filters

The carbon in these air filters removes odor while dust and contaminants are being trapped. Filter media is polyester and carbon (the greater the amount of carbon, the better the odor control). Frame is made of reinforced cardboard that's treated to resist humidity. A galvanized steel backing supports the frame. Filters are marked with trade size and airflow direction. Actual length and width are 1/2″ less than trade size shown. Meet UL Class 2 flame retardance requirements.

Filters with 10 grams of carbon/sq. ft.—Less odor control than filters with 300 grams of carbon. Filters are pleated and have a MERV 4 efficiency rating. Maximum temperature is 225° F.

Filters with 300 grams of carbon/sq. ft.—More carbon equals better odor control; use for demanding applications. Filters have a MERV 7 efficiency rating. Maximum temperature is 250° F.

Antimicrobial Pleated Panel Air Filters

An antimicrobial agent effectively controls the growth of mold, mildew, and fungi on these pleated filters. The pleated design provides greater surface area and longer life expectancy than similar flat panel filters. Frame is reinforced cardboard and filter media is a polyester blend. All are marked with trade size and airflow direction. Actual length and width are 5/8″ less than trade size shown. Filters meet UL Class 2 flame retardance requirements and have a MERV 7 efficiency rating. Maximum temperature is 220° F.

HEPA Filters

Particleboard Frame

Galvanized Steel and Type 304 Stainless Steel Frame

Control dust and contaminants in the most demanding environments with these HEPA filters. They're 99.97% efficient at trapping particles as small as 0.3 microns. Filter media is ultrafine glass fiber. All have a neoprene gasket on the downstream side of the filter.

Particleboard Frame—Frame is 3/4″ thick. Maximum temperature is 180° F. The *5 7/8″ thick* and *11 1/2″ thick* filters meet UL Class 2 flame retardance requirements.

Galvanized Steel Frame and ***Type 304 Stainless Steel Frame***—Maximum temperature is 200° F. *2 3/4″ thick* filters have a 20-ga. frame (unless noted) and meet UL Class 2 flame retardance requirements. *5 7/8″ thick* and *11 1/2″ thick* filters have an 18-ga. frame and meet UL Class 1 flame retardance requirements.

★ Has a 16-ga. aluminum frame.

Extended-Surface Rigid Box Air Filters

A metal frame with dense fiberglass filter media and corrugated aluminum media separators make these filters great for use in variable air volume systems. (These systems maintain comfort in the areas they serve by varying the volume of conditioned air.) Thanks to their rigid construction, these filters maintain their shape when your system is not running—unlike bag filters, which lose their shape during system downtime. Filters meet UL Class 1 flame retardance requirements. Actual length and width are 5/8″ less than trade size shown.

180° F max. temperature filters have a 26-ga. galvanized steel frame. ***900° F max. temperature*** filters have a 26-ga. aluminized steel frame.

Antimicrobial Panel Air Filters

The economical alternative to pleated filters, these have a flat panel design and are treated with an antimicrobial agent that controls the growth of mold, mildew, and fungi on the filter. Frame is fiberboard. Filter media is polyester that's treated with a tackifier to retain more dust particles. Filters are marked with trade size. All are 1″ thick. Actual length and width are 5/8″ less than trade size shown. Meet UL Class 2 flame retardance requirements and have a MERV 8 efficiency rating. Maximum temperature is 220° F.

Antimicrobial Wire-Reinforced Air Filters

A semirigid wire grid placed between layers of nonwoven polyester media provides excellent filter strength without compromising filtering efficiency. Filters are treated with an antimicrobial agent that controls the growth of mold, mildew, and fungi on the filter—great for high-humidity applications. Filter media is treated with a tackifier to retain more dust particles. All filters are three-ply and 1½″ thick. They provide both a snug fit and a continuous seal around their outer edge. Actual length and width are 1″ greater than trade size shown. Filters meet UL Class 2 flame retardance requirements and have a MERV 8 efficiency rating (see page 677 for information about MERV ratings). Max. temperature is 220° F.

Polyester Air Filter Rolls

It's easy to cut these polyester rolls to size. They can be used in filter media pad frames (not included; see 2169K on page 680). Meet UL Class 2 flame retardance requirements. Maximum temperature is 225° F, except 2″ thick rolls, which have a maximum temperature of 150° F.

Choose from dry and tacky rolls. ***Dry rolls*** are white. ***Tacky rolls*** retain dust particles and prevent them from migrating into your ducts. Rolls are blue on one side and white on the other.

Rigid Polyester Air Filter Rolls

Rigid polyester is easy to cut, yet firm enough to be used without a frame. You can use it as a direct replacement for neoprene-coated natural fiber (also known as hog hair).

Material has low resistance to air flow, stands up well to water and humidity, and is reusable. Rolls meet UL Class 2 flame retardance requirements. Max. temp. is 225° F. Color is blue.

Fiberglass Air Filter Rolls

Bulk fiberglass rolls can be cut to size to replace fiberglass air filters. These rolls have a skin backing for support, but installation in a filter media pad frame (not included; see 2169K on page 680) may be necessary for added support. Meet UL Class 2 flame retardance requirements. Maximum temperature is 300° F. Color is white.

Rolls are 20 ft. long.

Polyurethane Foam Air Filter Rolls

In addition to being washable, these filter rolls have high tear resistance and very low airflow resistance. Meet UL Class 2 flame retardance requirements. Maximum temperature is 200° F. Color is charcoal gray.

All rolls are 48″ wide. ***30 PPI*** (pores per inch) rolls are for general-purpose filtering. ***60 PPI*** rolls are for filtering small particles and pollen.

Sample pack contains one piece each of 30 PPI and 60 PPI foam. Each sample piece is 3″ Ht.×3″ Wd.×¼″ Thick.

Automatic Air Filter Rolls

Filter media is wrapped onto a core for mounting in automatic and semiautomatic filtering equipment where large volumes of air must be constantly filtered. Sewn-in heavy kraft paper leaders and trailers make installation easy. A tough scrim backing provides durability. Meet UL Class 2 flame retardance requirements. All rolls are 65 ft. long.

Fiberglass— Filter media is fiberglass that's treated with a tackifier to retain more dust particles. Rolls are 2″ thick. Maximum temperature is 250° F. Color is blue.

Polyester— Filter media is nonwoven polyester to trap more dust than fiberglass. Rolls are ⅝″ thick. Maximum temperature is 220° F. Color is white.

Filter Media Pad Frames

1″ and 2″ Thick

Use these frames for mounting cut-to-size and precut filter media. Frames are 24-ga. galvanized steel with a 16-ga. back grid. Actual length and width are 1/2″ less than trade size shown.

1″ and ***2″ thick*** frames have hinged filter retaining wires that swing out of the way for filter replacement.

Trade Size	1/2″ Thick		1″ Thick		2″ Thick	
12″×24″	2169K63	$7.48	2169K41	$10.42	2169K51	$10.63
16″×20″	2169K64	7.80	2169K12	10.20	2169K22	10.39
16″×25″	2169K65	8.40	2169K13	10.68	2169K23	11.53
20″×20″	2169K68	8.40	2169K14	10.90	2169K24	11.53
20″×25″	2169K66	8.40	2169K15	11.10	2169K25	11.94
24″×24″	2169K67	8.80	2169K16	11.09	2169K26	12.50

Panel Filter Frames

Mount permanent and disposable panel filters. Frames are 2 1/8″ thick and made of 16-ga. galvanized steel to handle the most demanding filter applications. They have holes for bolt assembly (hardware included) and can be welded together to hold more filters if needed. All have filter retaining clips and a foam gasket for a tight seal.

Actual Size			Actual Size		
12″×24″	20615K91	$20.14	20″×20″	20615K94	$21.86
16″×20″	20615K92	20.86	20″×25″	20615K95	22.71
16″×25″	20615K93	21.86	24″×24″	20615K96	23.57

Grease Filters

Two layers of baffles allow grease-laden air to swirl, throwing grease against the side of the baffle where it drains down to the bottom. The baffle design protects the blower and prevents flames from passing through the filter and into ductwork. Filters have handles to allow easy removal for cleaning with water or steam. All are marked with airflow direction.

Filters are 2″ thick. Actual width and height are 1/2″ less than trade size shown. All are UL listed to meet National Fire Protection Association Standard 96.

All three material choices are corrosion resistant. ***Aluminum*** filters have a maximum temperature of 250° F. ***Galvanized steel*** filters have a maximum temperature of 450° F. ***Type 304 stainless steel*** filters have a maximum temperature of 900° F.

Use the optional *filter removal tool* when changing filters to avoid handling greasy metal. It's made of galvanized steel and has a 4 1/2-ft. long handle.

Note: Install filters with baffles running vertically (as shown).

Trade Size, Wd.×Ht.	Aluminum		Galvanized Steel		Type 304 Stainless Steel	
16″×25″	2092K17	$22.67	2092K27	$15.64	2092K37	$58.63

About Light Bulbs

Light Bulb Terminology

Lumens— The amount of light output produced by a light source. The higher the lumens, the brighter the light.

Energy Efficiency (Lumens per Watt)— The amount of light (lumens) produced for each watt of energy used. The higher the lumens per watt, the greater the energy efficiency.

Rated Life— The amount of time (in hours or years) it takes for 50% of a group of identical bulbs to burn out.

Color Rendering Index (CRI)— Ability of a light source to represent an object's true colors. Measured on a scale of 0-100 with 100 representing the level at which colors appear most natural. Incandescent, halogen, and natural daylight have a CRI of 100.

Light Appearance— Measured in Kelvins (K), light appearance indicates how cool or warm light appears. Cool light provides more contrast, so it's better for visual tasks. Warmer light—between 2,700K and 3,600K—works best for general indoor or task lighting. The chart below compares the effects of different light appearances.

	Warm	Neutral	Cool	Daylight
Light Appearance	3,000K	3,500K	4,100K	5,000K+
Suggested Applications	Restaurants, Hotel Lobbies, Libraries, Office Areas	Public Reception Areas, Showrooms, Office Areas, Retail Stores	Office Areas, Conference Rooms, Classrooms, Mass Merchandisers, Hospitals	Galleries, Museums, Jewelry Stores, Printing Companies

ⓘ For information about Color Rendering Index (CRI) and light appearance, go to mcmaster.com and search for **15115KAC**.

Light Bulb Types

Incandescent— The original light bulbs for basic lighting needs. They can be replaced with halogen and compact fluorescent screw-in bulbs without changing the fixture.

Halogen— A good alternative to incandescent bulbs, halogen bulbs last longer and produce brighter, whiter light. Ideal for use in spot and flood, accent, display, and track lighting.

LED— These bulbs emit a focused beam of a single color and are ideal for use in indicating light fixtures, panel boards, and where brightness and directional lighting are important and general illumination is not. They last much longer than traditional miniature bulbs, resist vibration, and are energy efficient.

Fluorescent— Longer lasting and more energy efficient than incandescent and halogen bulbs, these bulbs also generate less heat. For use in residential and office areas, hotels, restaurants, hospitals, conference rooms, and classrooms. Available as compact screw-in, compact plug-in, and tubular bulbs, all offer a range of light appearance options. *Compact fluorescent screw-in* bulbs can directly replace incandescent and halogen bulbs without changing the fixture.

High-Intensity Discharge (HID)— When energy costs are a concern, select these light bulbs. All require a warm-up period to start. *Mercury vapor* are less expensive but are not as energy efficient as metal halide and high-pressure sodium bulbs. They produce a blue-green colored light and have below average color rendering. For use as landscape, roadway, parking lot, and building floodlighting. *High-pressure sodium* are the perfect choice when energy efficiency is important but CRI is not critical. They produce a yellowish light and are used as floodlighting for parking areas and warehouses. *Metal halide* produce a crisp white light and have the best color rendering among HID bulbs. For use in shopping malls, retail and commercial buildings, roadways, parking lots, and building floodlighting, as well as sports and warehouse lighting.

Incandescent Light Bulbs *(Continued from previous page)*

Bulbs are typically used in dry, indoor environments, unless otherwise indicated. Life rating and yearly energy cost are based on three hours per day, $0.11 per kWh. Cost depends on rates and use. Ratings are provided at voltage shown.

Long-life bulbs last up to 20 times longer than general service incandescent bulbs.

Rough-service bulbs have reinforced filaments for better shock and vibration resistance.

Shatter-resistant bulbs have a silicone outer coating (unless noted) that prevents shattering when water splashes the bulb and retains glass shards if the bulb breaks.

Rough-service/shatter-resistant bulbs combine the features of both for added life and durability.

Daylight bulbs have a special coating that creates a whiter light than traditional incandescent bulbs, allowing colors to appear brighter and more vivid.

Energy-saver bulbs consume less energy without a significant reduction in light output.

Colored bug bulbs won't attract insects.

Spiral Screw-In Compact Fluorescent Light Bulbs

Made of one continuous tube, these bulbs cast light like standard incandescent bulbs but require less energy. Bulbs have an integral ballast and operate on 120 volts. CRI (color rendering index) is 80-86. Bulbs are typically used in dry, indoor environments, unless otherwise indicated. Life rating and yearly energy cost are based on three hours per day, $0.11 per kWh. Cost depends on rates and use. *Note:* Bulbs contain mercury. For more on clean up and safe disposal, visit www.epa.gov/cfl.

Yellow spiral bulb won't attract insects. *Shatter-resistant spiral* bulbs have a silicone outer coating that retains glass shards if the bulb breaks.

Fluorescent, Halogen & LED Light Bulbs

For information about light bulbs, see page 682.

Don't see the light bulb you need? Just tell us what you're looking for and we'll get it for you.

Screw-In Compact Fluorescent Light Bulbs

Replace your incandescent bulbs with these energy-saving alternatives—they offer equal light output but use less wattage. Bulbs have an integral ballast and operate on 120 volts. CRI (color rendering index) is 81-88. Bulbs are typically used in dry, indoor environments. Life rating and yearly energy cost are based on three hours per day, $0.11 per kWh. Cost depends on rates and use. *Note:* Bulbs contain mercury. For more on clean up and safe disposal, visit www.epa.gov/cfl.

Candelabra base bulbs offer increased versatility by including an adapter that permanently converts bulbs to fit medium-base sockets.

Screw-In Halogen Light Bulbs

Get brighter, whiter light by replacing incandescent bulbs with their longer-lasting halogen counterparts. Halogen bulbs last two to three times longer and operate on 120 volts. Life rating and yearly energy cost are based on three hours per day, $0.11 per kWh. Cost depends on rates and use.

Screw-In LED Light Bulbs

Save energy and replacement costs with LED bulbs—they last up to 10 times longer than incandescent bulbs and five times longer than fluorescent bulbs. Bulbs operate on 120 volts and are not dimmable. CRI (color rendering index) is 68-75. Life rating and yearly energy cost are based on three hours per day, $0.11 per kWh. Cost depends on rates and use.

Don't see the light bulb you need? Just tell us what you're looking for and we'll get it for you.

Incandescent Spotlight and Floodlight Bulbs

Commonly called reflector bulbs, these bulbs work best for directional illumination. Bulbs are typically used in dry, indoor environments. PAR38 bulbs can also be used outdoors in an open fixture. All operate on 120 volts. Life rating and yearly energy cost are based on three hours per day, $0.11 per kWh. Cost depends on rates and use.

Spotlight Bulbs—Generate a more concentrated beam of light.

Floodlight Bulbs—Generate a wider beam of light. *Shatter-resistant* bulbs have a PTFE outer coating that prevents shattering when water splashes the bulb and retains glass shards if the bulb breaks.

Compact Fluorescent Floodlight Bulbs

Achieve the same light output using less wattage than the incandescent alternative. All bulbs have an integral ballast, operate on 120 volts, and can be used outdoors in an open fixture, unless noted. CRI (color rendering index) is 82. Life rating and yearly energy cost are based on three hours per day, $0.11 per kWh. Cost depends on rates and use. *Note:* Bulbs contain mercury. For more on clean up and safe disposal, visit www.epa.gov/cfl.

Dimmable Bulbs—Dimming range is 5-100% except 1685K52 and 2117T82, which have a 20-100% range.

Halogen Spotlight and Floodlight Bulbs

Base Types

Boasting brighter, whiter light and longer life, halogen bulbs serve as great substitutes for incandescent bulbs. Comparable to Masterline and Capsylite bulbs. Bulbs can be used outdoors in an open fixture, except *GU10 bi-pin base* bulbs, which are typically used in a dry, indoor environment. All operate on 120 volts. Life rating and yearly energy cost are based on three hours per day, $0.11 per kWh. Cost depends on rates and use.

Spotlight Bulbs—Generate a more concentrated beam of light.

Floodlight Bulbs—Generate a wider beam of light. *Long-life* bulbs last up to twice as long as standard bulbs.

MR-16 Halogen Spotlight and Floodlight Bulbs

Use the controlled beam of brilliant, white light from these bulbs for directional and accent lighting. Bulbs operate on 12 volts, have a bi-pin base, and do not have a lens (unless noted). Package quantity is 12. *Long-life bulbs* last at least twice as long and have a glass lens.

Spotlight Bulbs— Generate a more concentrated beam of light.

Floodlight Bulbs— Generate a wider beam of light.

Note: Light intensity is measured in candlepower, which indicates the intensity of light emitted. The higher the candlepower, the brighter the bulb.

Trade Number	Watts	Beam Spread	Candle-power	Rated Life, hours		Each Partial Pkg.	Each Full Pkg.

MR-16 LED Light Bulbs

Reduce time spent replacing burned out bulbs by using LEDs—they last up to 25 times longer than conventional alternatives. Bulbs operate on 12 volts, have a bi-pin base, and have an aluminum body that dissipates heat. Lens is acrylic. CRI (color rendering index) is 85.

Note: Light intensity is measured in candlepower, which indicates the intensity of light emitted. The higher the candlepower, the brighter the bulb.

Light Appearance	Watts	Beam Spread	Candlepower	Rated Life, hours		Each
3,000K	6	40°	300	35,000	8643T5	$59.20
5,000K	6	40°	424	35,000	8643T1	59.20

Infrared Heat Bulbs

Radiate a warm glow that's perfect for heating, drying, and baking. Bulbs have a medium base, unless noted. ***Shatter-resistant*** bulbs have a PTFE outer coating that prevents shattering when the bulb is splashed with water and retains glass shards if the bulb breaks.

♣ Medium skirt base.

Sealed-Beam & Audiovisual Light Bulbs

For information about light bulbs, see page 682.

Don't see the light bulb you need? Just tell us what you're looking for and we'll get it for you.

Sealed-Beam Bulbs

Base Types

Screw Terminals

Slip-On Terminals

2 Contact Lugs

3 Contact Lugs

Circular Incandescent

Rectangular Halogen

Commonly used in industrial vehicles and cars, these clear bulbs are also suitable for spot, flood, and emergency lighting. Use bulbs both indoors and out. *Note:* Light intensity is measured in candlepower, which indicates the intensity of light emitted. The higher the candlepower, the brighter the bulb.

Use bulbs with *contact lugs* for automotive headlamps: two lugs for high beam, three lugs for low/high beam.

Also Available: Additional sealed-beam bulbs. Please ask for 9855T888 and specify bulb trade number.

Halogen and Xenon Bi-Pin Bulbs

Halogen and Xenon — *Long-Life Halogen*

Equip optical instruments and task lights with these compact, low-voltage bulbs. All are clear, have a bi-pin base, and can operate in any position.

Long-life halogen bulbs last up to twice as long as other halogen bulbs. ***Xenon*** bulbs emit less heat and last much longer than halogen bulbs.

Don't see the light bulb you need? Just tell us what you're looking for and we'll get it for you.

Miniature Incandescent Bulbs

Use in instruments, indicators, headlights and interior vehicle lights, telephones, emergency lights, task lights, and more. Bulbs are clear and have a single filament, unless noted. *Note:* If wattage rating is needed, simply multiply volts×amps.

Also Available: Additional miniature bulbs. Please ask for 9527T888 and specify trade number.

● Dual-filament bulb.

Miniature LED Bulbs

Swap out miniature incandescent bulbs for these long-lasting, energy-efficient, and durable alternatives. Great for use in panel boards, exit signs, indicating light fixtures, and as accessory lights for vehicles. LED bulbs last longer than incandescent bulbs (up to 100,000 hours) and use 80-90% less energy than conventional filament bulbs. They withstand shock, vibration, temperature changes, and frequent on/off cycling.

To Order: Specify green, red, or white. *Style 4* bulbs are also available in blue and yellow.

Neon Indicating Light Bulbs

Thanks to their no-filament design, these long-lasting bulbs withstand shock and vibration. Bulbs operate on 105-125 volts and cast an orange glow. To function properly, neon bulbs require resistance in their power circuitry. A built-in resistor in *Styles D* and *E* provides the required resistance.

Trade Number	Style	Base Type	Watts	Milliamps	Rated Life, hours	Series Resistance, ohms	Pkg. Qty.		Per Pkg.

LED Status-Indicating Light Bulbs

Save time and money by choosing these LED bulbs—they're energy efficient and last at least 50,000 hours.

Stand-alone bulbs, often called beacon lights, provide low-power, high-intensity signal light. They are perfect for security warning devices, flasher circuits, and industrial automation equipment. Each stand-alone bulb contains 48 LEDs.

Status-indicating bulbs make great replacements for stack lights.

To Order: Please specify color from those listed.

Available Colors	Rated Life, hours	120 VAC	Each	24 VDC	Each
(F) Stand-Alone Light Bulbs with Screw-In Medium Base					
Amber, Red	100,000	6585T2	$72.03	—	—
Blue, Green, White	100,000	6585T1	107.20	—	—

LED Exit Sign Light Bulb Kits

Replace standard incandescent bulbs with these longer-lasting, easy-to-install alternatives. Compatible with most single- and double-sided exit signs. Each kit contains two bulbs and two 12″ Lg.×8″ Ht.×0.031″ Thick. diffuser panels (bulbs and panels are the same color). Bulbs operate on 120 VAC, use 2.2 watts, and last up to 100,000 hours. Meet UL 924 requirements.

Equivalent Incandescent Bulb Shape	Bulb Base Type	Color	O'all Lg.		Per Kit
T6 (¾″ dia.)	Candelabra	Green	4⅝″	1557K26	$45.27
T6 (¾″ dia.)	Candelabra	Red	4⅝″	1557K25	35.61
T6½ (13/16″ dia.)	DC Bayonet	Red	4 27/32″	1557K15	35.61
T6½ (13/16″ dia.)	Intermediate	Red	4 27/32″	1557K35	35.61

Plug-In Compact LED Light Bulb

Replace your 13-watt 2-pin (GX23) base compact fluorescent bulb with this LED alternative—it lasts up to 10 times longer and is more durable. Bulb operates on 120 VAC.

Watts	Base Type	O'all Lg.	Rated Life, hours		Each
3	GX23	6⅞″	100,000	8746T1	$32.63

Plug-In Compact Fluorescent Light Bulbs with Ballast

Light Bulbs—Choose these energy-efficient spiral bulbs, and you can skip the search for a compatible ballast. Each bulb has a ballast built into the base. CRI is 82. Bulbs have a 2-pin base. Life rating and yearly energy cost are based on three hours per day, $0.11 per kWh. Cost depends on rates and use. Ratings are provided at 120 volts. *Note:* Bulbs contain mercury. For more on clean up and safe disposal, visit www.epa.gov/cfl.

Locking Adapter—Screw this adapter into a standard socket for medium-base bulbs (1 1/16″ dia.) and it will accept GU24 plug-in base bulbs instead. Adapter will permanently adapt sockets.

Watts	Equivalent Incandescent Bulb, watts	O'all Lg.	Brightness, lumens	Rated Life, years	Est. Yearly Energy Cost	Light Appearance		Each

For information about light bulbs, see page 682. For information about light appearance, see page 696.

Don't see the light bulb you need? Just tell us what you're looking for and we'll get it for you.

Plug-In Compact Fluorescent Light Bulbs

Comparable to PL, Dulux, and Biax bulbs, these fluorescent bulbs last longer and use less energy than incandescent and halogen options. CRI (color rendering index) is 82. ***Shatter-resistant bulbs*** have a plastic coating that retains glass shards if the bulb breaks.

Use *2-pin bulbs* with magnetic ballasts and *4-pin bulbs* with electronic ballasts. *Note:* Bulbs do not come with a ballast.

Fluorescent Light Bulbs

For information about light bulbs, see page 682.

Don't see the light bulb you need? Just tell us what you're looking for and we'll get it for you.

About Matching Light Appearance to Your Current Fluorescent Light Bulb

Light appearance, measured in degrees Kelvin, indicates how warm or cool light appears. Simply find the light appearance (3,000K), description, or abbreviation (shown at right) listed on your bulb and choose a replacement to match.

For additional information about CRI (color rendering index) and light appearance, go to mcmaster.com and search for **15115KAC**.

Light Appearance	Description	Possible Abbreviations
2,700K	Warm	#27, 827
3,000K	Warm White	#30, 730, 830, 930 or WW
3,500K	Neutral	#35, 735, 835
4,100K	Cool White	#41, 741, 841, or CW, CWX
5,000K	Daylight	#50, 750, 850, 950
6,500K	Cool Daylight	#65, 765, 865, or D, DX

T12 (1½" Diameter) Fluorescent Light Bulbs

Medium Bi-Pin Base

Single-Pin Base

Recessed Double-Contact (DC) Base

Use these bulbs in dry environments. *Low-mercury bulbs* (comparable to Alto, Eco, Ecologic, and Ecolux bulbs) are more environmentally friendly than standard fluorescent bulbs. Bulbs ***for use with preheat ballasts*** require a starter for operation (see page 704) and may take several seconds to warm up.

Shatter-resistant bulbs have a plastic coating that retains glass shards if the bulb breaks and can be used in an open fixture rated for outdoor use. USDA approved, FDA compliant, and meet OSHA regulations.

Don't see the light bulb you need? Just tell us what you're looking for and we'll get it for you.

T8 (1″ Diameter) Fluorescent Light Bulbs

These slim bulbs achieve greater light output than T12 bulbs, but use less wattage. Bulbs are typically used in dry environments. *Low-mercury bulbs* (comparable to Alto, Eco, Ecologic, and Ecolux bulbs) are more environmentally friendly than standard fluorescent bulbs. Bulbs ***for use with preheat ballasts*** require a starter for operation (see page 704) and may take several seconds to warm up.

Shatter-resistant bulbs have a plastic coating that retains glass shards if the bulb breaks and can be used in an open fixture rated for outdoor use. USDA approved, FDA compliant, and meet OSHA regulations.

Medium Bi-Pin Base — *Single-Pin Base* — *Recessed Double-Contact (DC) Base*

T5 (5/8″ Diameter) Fluorescent Light Bulbs

Save energy with T5 bulbs—they're thinner than T8 and T12 bulbs and provide greater light output using less wattage. Bulbs are typically used in dry environments. Bulbs ***for use with preheat ballasts*** require a starter for operation (see page 704) and may take several seconds to warm up.

Shatter-resistant bulb has a plastic coating that retains glass shards if the bulb breaks and can be used in an open fixture rated for outdoor use.

Glow-in-the-Dark Emergency Fluorescent Light Bulb

Exit the building safely during a power failure, aided by this bulb. Thanks to an inner phosphor coating, it will glow for up to 1½ hours after a blackout. This general service bulb is a T8 (1″ dia.) bulb with a medium bi-pin base. For use with instant-start ballasts.

Blacklight Blue Fluorescent Light Bulbs

T12 Bulb
Medium Bi-Pin Base

T8 Bulb
Medium Bi-Pin Base

T5 Bulb
Miniature Bi-Pin Base

An integral blue filter absorbs the visible light produced by these bulbs, allowing blacklight blue long wave ultraviolet (UVA) light to pass through. Bulbs appear black when they are off. For blacklight bulbs used in bug zappers, which appear white when off, see page 2116. Bulbs *for use with preheat ballasts* require a starter for operation (see page 704) and may take several seconds to warm up. Those *for use with rapid-start ballasts* have a very slight start-up delay.

Shatter-resistant bulbs have a plastic coating that retains glass shards if the bulb breaks. They are USDA approved, FDA compliant, and meet OSHA regulations.

Ultraviolet Germicidal Light Bulbs

Shortwave ultraviolet radiation emitted from these bulbs makes them well-suited for disinfection and sterilization applications. Bulbs are clear and may take several seconds to warm up. Use with preheat ballasts. ***Caution:*** Bulbs emit ultraviolet radiation, which is harmful to skin and eyes. Only install in fixtures with adequate protection.

High-Pressure Sodium Light Bulbs

E17 ***ED23½*** ***ET23½*** ***BT28*** ***BT37*** ***ED18*** ***ET18*** ***E25***

Preferable to metal halide bulbs if energy efficiency is more important than CRI (color rendering index). These bulbs are a popular choice for street, parking lot, and building floodlighting and are typically used in dry environments, unless otherwise indicated.

Light appearance is 1,900-2,200K. CRI is 21-22 except for *high-color rendering bulbs*, which have a CRI of 65. Initial start time is 3-5 minutes with a 1-minute restart. *Instant-restart bulbs* restart without delay. Coated bulbs are white to reduce glare. Bulbs operate in any position, unless noted. *Note:* Bulbs should only be used with the ballast that has the matching ANSI ballast number listed below.

End-of-life shut-off bulbs clearly indicate when the bulb needs to be replaced. They remain off at the end of their service life instead of cycling on and off like standard high-pressure sodium bulbs.

Long-life bulbs with instant restart have two arc tubes that allow instant restart during a momentary power interruption.

High-color rendering bulbs provide whiter light than other high-pressure sodium bulbs without changing your current ballast.

Shatter-resistant bulbs have a plastic outer coating that retains glass shards if the bulb breaks, making them ideal for use outdoors in open fixtures.

Metal Halide Replacements for High-Pressure Sodium Light Bulbs

Base Type

Mogul

If yellowish high-pressure sodium bulbs aren't bright enough, trade them in for the brighter, whiter light of metal halide bulbs—no ballast change necessary. CRI (color rendering index) is 65-70. Bulbs are clear and have a light appearance of 4,000K, unless noted. Can be used outdoors in a fixture rated for outdoor use.

Note: Bulbs should only be used with the ballast that has the matching ANSI ballast number listed below.

E39 Mogul *EX39 Mogul*

ED17 *E17* *ED28* *BT28* *ET18* *T15* *ED37* *BT37* *BT56*

For crisp white light and better color rendering, replace high-pressure sodium bulbs with these alternatives. They are more energy efficient than fluorescent bulbs as well. Light appearance ranges from 3,600-4,200K, unless noted. CRI (color rendering index) is 55-82, unless noted. Initial start time is 2-5 minutes. Restart time is 5-8 minutes for *pulse-start bulbs* and 10-15 minutes for the rest. Coated bulbs are white to reduce glare. Can be used outdoors in a fixture rated for outdoor use.

Note: Bulbs should only be used with the ballast that has the matching ANSI ballast number listed below.

Shatter-resistant bulbs have a plastic coating that retains glass shards if the bulb breaks. ***Pulse-start bulbs*** offer a faster restart time than standard metal halide bulbs. *True color bulbs* are closest to natural sunlight, with a light appearance of 5,000K and a CRI of 90.

★ Also for ANSI ballast M155. ♣ Also operates base-down. ■ Also operates horizontally. ◤ Light appearance is 3,000K.

Mercury Vapor Light Bulbs

Here's a less-expensive alternative to metal halide bulbs but with a lower CRI (color rendering index) and less energy efficiency. CRI is 40-45. Initial start and restart time is 10-15 minutes. Bulbs are made of white coated glass, operate in any position, and are commonly used in street, flood, and parking lot lighting.

Note: Bulbs should be used only with the ballast that has the matching ANSI ballast number listed below.

Watts	Bulb Shape	O'all Lg.	Brightness, lumens	Rated Life, hours	Light Appearance	ANSI Ballast No.	Equivalent To: Philips	Osram/Sylvania	General Electric		Each

About Replacing a Ballast

When it's time to replace your ballast, check the label for the following information.

Voltage— This may be listed in several formats, including 120V, 277 volts, 480 VAC, and so on.

Ballast Type— Older ballasts that do not list this information are often magnetic. ***Magnetic ballasts*** provide reliable service and long life. ***Electronic ballasts*** are quieter and more energy efficient, plus they run cooler and reduce the flicker effect associated with magnetic ballasts. They operate at a higher frequency. *Low-frequency rapid-start electronic ballasts* don't interfere with high-frequency electronic equipment.

Start Type—

- ***Preheat ballasts*** need a starter (see page 704) to properly light a bulb (except ballasts for 2-pin compact fluorescent bulbs, which do not require a starter). They may take several seconds to heat up, causing the bulb to flicker. *Preheat ballasts with built-in starter* use high voltage supplied by the starter to light preheat bulbs.
- ***Rapid-start ballasts*** provide starting voltage to heat the filament and light the bulb. Because they are typically wired in series, the entire circuit will shut off if one bulb fails. These ballasts have a slight turn-on delay compared to instant-start alternatives. Some rapid-start ballasts are specifically designed for use with high-output or very-high-output light bulbs.
- ***Programmed-start/programmed rapid-start ballasts*** use precise voltage to heat the filament initially, and light the bulb as soon as enough voltage is present. These two ballasts are often referred to interchangeably. Wired in series—which means the entire circuit will shut off if one bulb fails—these ballasts are ideal in applications where bulbs have high on/off cycles. Programmed-start ballasts provide up to 50,000 bulb starts, so bulbs last longer in frequent-starting applications. Programmed rapid-start ballasts provide up to 30,000 bulb starts.
- ***Instant-start ballasts*** use high initial voltage to light a bulb immediately—no need to preheat the filament. Because they are wired in parallel, all other bulbs in the circuit will remain lit if one fails. They are more energy efficient than rapid-start ballasts.

Bulb Type and Quantity— One ballast can operate several bulbs. Your ballast may list many bulb trade numbers, plus a bulb quantity. For example, (2)F32T8 means the ballast will power two F32T8 (32-watt, T8-sized bulbs). This information might appear under the heading "lamp type" on your label. High-intensity discharge (HID) bulbs use magnetic ballasts, which work with metal halide, metal halide pulse-start, and high- and low-pressure sodium bulbs. Use ANSI ballast codes to match bulbs and ballasts.

Other Helpful Data—

- Minimum start temperature, also listed on ballast labels, can help confirm your selection.
- Check the wiring diagram on your ballast or count the number of wires sticking out of the ballast to make sure there are enough for your application. You may not need all of the wires. Take note of ballast size to confirm it will fit in your fixture.

Fluorescent Ballasts

Expect good performance and energy savings from these high-efficiency ballasts. They are compatible with all standard and energy-saving fluorescent bulbs, and can be used indoors and out. UL listed.

Ballasts for Plug-In Compact Fluorescent Bulbs

Use these ballasts with compact fluorescent bulbs indoors and out. (For compact fluorescent light bulbs, see page 695.) Ballasts operate on 120 VAC, except ***universal voltage ballasts*** can operate anywhere from 120 to 277 VAC. UL listed.

For No. of Bulbs	For Bulb Watts	Min. Start Temp.	Lg. × Wd. × Dp.		Each

▲ Requires a starter.

High-Pressure Sodium and Metal Halide Magnetic Ballast Kits

Operate one bulb at 120, 208, 240, or 277 volts (unless noted) with these ballast kits. Use indoors and out. Kits include ballast, capacitor, mounting brackets, hardware, and instructions (unless noted). ***High-pressure sodium*** and ***metal halide pulse start*** kits also include an ignitor. ***Metal halide*** kits do not require an ignitor.

♣ Operates at 120 volts only. Includes ballast and ignitor only.
♦ Operates at 120 or 277 volts only. ■ Also operates at 480 volts.
♥ Also for ANSI number M170.

For information about light bulbs, see page 682.

Fluorescent Starters

Use these starters with preheat fluorescent bulbs and ballasts. UL listed and CSA certified.

Starter Trade Number	Watts	Dia. × Lg.		Each
FS-2	14, 15, 20	3/4″ × 1 1/2″	1623K1	$1.02
FS-4	30, 40	3/4″ × 1 1/2″	1623K2	1.02
FS-5	4, 6, 8	3/4″ × 1 1/2″	1623K3	1.02
FS-12	32 (Circline)	3/4″ × 1 1/2″	1623K5	1.02
FS-22	22 (Circline)	3/4″ × 1 1/2″	1623K6	1.02
FS-25	25	3/4″ × 1 1/2″	1623K7	1.02

High-Pressure Sodium Starters

Start bulbs quickly and effectively by pairing these starters with your high-pressure sodium bulb ballasts. Furnished with a mounting clamp, unless noted. UL recognized and CSA certified.

Watts	ANSI Ballast No.	Max. Mounting Distance from Ballast	Dia. × Lg.		Each
35-150	S76-S54	2 ft.	1 5/16″ × 2″	14595K48	$56.68
150-400	S56-S51	2 ft.	1 5/16″ × 2 1/2″	14595K49	56.45
1000	S52	5 ft.	4 3/4″ × 2 1/8″ × 1 3/8″	14595K52★	75.62

★ Oval shape; dimensions are Lg. × Wd. × Dp. Furnished with mounting tabs.

Fluorescent Ballast Connectors

Two Circuit

Three Circuit

Replacing a ballast is quick and easy when you install these quick-disconnect connectors. To install, simply strip the wires between the ballast and power source and push each wire into the connector. They accept solid wire size 18-12 AWG and stranded wire size 14-12 AWG. Connectors comply with National Electric Code requirements for connecting linear fluorescent lights.

Made of orange nylon with copper alloy contacts. Maximum temperature is 221°F. Maximum voltage is 600 VAC. UL listed and CSA certified.

Choose the ***three-circuit ballast connector*** if your fixture has an integral switch or dimmer.

Number of Circuits	Amps @ 120 VAC	Pkg. Qty.		Per Pkg.
2	6	3	8807K1	$6.76
2	6	25	8807K2	35.92
3	6	20	8807K4	50.61

Light Bulb Lubricant

Sick of stubborn bulbs sticking in sockets? A light coating of this nontoxic, environmentally safe lubricant makes installing and removing light bulbs simple. It won't run, drip, or harden. Apply lubricant to the metal sides of any light bulb before installation. Net weight is 0.5 oz.

7112K1 ..... **Each** $5.43

Fluorescent Light Bulb Changer

Easily install and remove fluorescent bulbs from spring-loaded sockets. This changer works with T12 (1 1/2″ dia.) bulbs up to 8 ft. long. Nylon jaws snap onto bulbs for a secure grip, and the telescoping aluminum pole extends your reach up to 12 1/2 ft.—no ladder required.

8376K11 ..... **Each** $172.00

Miniature Light Bulb Changers

A

B

Install and remove miniature bulbs with ease, even in hard-to-reach areas.

Style A has two ends to accommodate a wide range of bulbs. It is made of rubber.

Style B has a steel lever with a rubber handle. Insert bulb and grasp lever for a secure grip.

For Bulb Diameters	O'all Lg.		Each
A ... 1/4″ to 13/32″ and 3/4″ to 1″	3″	9820K1	$5.64
B ... 13/64″ to 5/16″	4″	9820K2	25.78

Light Bulb Changers and Broken Bulb Remover

Grip light bulbs firmly for easy installation and removal of hard-to-reach bulbs. Use with 1 1/16″ dia. medium-base and 1 5/8″ dia. mogul-base incandescent and high-intensity discharge (HID) bulbs.

C Spring-Clip Changers with Pole—Furnished with a 5-ft. long steel pole (1701K18 below). Overall length is 5 7/8 ft.

D Spring-Clip Adjustable-Angle Changers with Pole—Similar to Style C, but with a flexible joint that works on bulbs mounted at an angle. Furnished with a 5-ft. long steel pole (1701K18 below). Overall length is 6 1/4 ft.

E Suction Cup Changers—Work on recessed fixtures. Pole is not included (1701K18 sold separately below). Length is 5 1/4″.

For Bulb Shape		Each
C.. BT37, BT46, E37, ED37	1701K11	$119.20
C.. BT28, E21, E23, E23 1/2, E25, E28, ED23 1/2, ED28	1701K12	63.70

E.. R40, R52, RB52	1701K22	59.60

F Broken Bulb Remover—Fits onto the pole of the above changers as well as 1701K18 sold separately below. It removes the base of broken medium- and mogul-base bulbs. It is 6 1/2″ long.

1701K19 ..... **Each** $23.19

Add-on pole is 5 ft. long and made of lightweight, wood-insulated steel. Connect up to four poles.

1701K18 ..... **Each** $26.83

Vacuum-Assisted Light Bulb Changers and Broken Bulb Remover

Get a firm grip on hard-to-reach incandescent and halogen bulbs. Just place the flexible rubber cup on the bulb and pull down on the piston rod to create a vacuum. Use with 1 1/16″ dia. medium-base and 1 5/8″ dia. mogul-base bulbs. Changers come with one 4-ft. aluminum pole, but you can attach up to five add-on poles (sold separately below).

G Changer for 15- to 1500-watt bulbs works with any size smooth-surface bulb. It is 4 1/2 ft. long.

1689K1 ..... **Each** $70.37

G Changer for externally beaded (grooved) PAR38 flood bulbs is 4 1/2 ft. long.

1689K14 ..... **Each** $80.56

H Adjustable-angle adapter allows you to change bulbs mounted at an angle. It's made of flexible neoprene and attaches between the pole and rubber cup of the above changers. It is 1 ft. long.

1689K15 ..... **Each** $38.89

J Broken bulb remover fits on the pole of the above changers and 1689K12 sold separately below to safely remove medium- and mogul-base bulbs. It has a hardwood body and is 8 1/4″ long.

1689K3 ..... **Each** $32.41

Add-on pole is 4 ft. long and made of aluminum.

1689K12 ..... **Each** $33.33

For information about light bulbs, see page 682.

Lighting Maintenance Cart

Made to hold everything you need to change a light bulb, this cart is ready to roll when a bulb burns out. It comes with a tool box and has compartments for fluorescent bulbs up to 4-ft. long as well as all sizes of incandescent and reflector bulbs. Use the three built-in steps to reach ceilings up to 9-ft. high (maximum capacity is 250 lbs.). Steps open up to reveal three of the four storage compartments. Two polypropylene wheels provide mobility while adjustable front stoppers provide stability. Cart is black and measures 34¾″ Lg. × 22¾″ Wd. × 53⅛″ Ht.

1603K44 ..... **Each** $589.18

Shown with Bulbs (Not Included)

Light Bulb Recycling Containers

Safely dispose of your used fluorescent and HID light bulbs by recycling them. When the container is full, use the preprinted address label to ship the bulbs to a recycling facility. The price of the container includes pickup and transportation costs as well as a certificate of recycling once the bulbs are received and recycled.

For Bulb Type (Capacity)		Each
Boxes		
4-ft. T12 Fluorescent (32) or 4-ft. T8 Fluorescent (64) or U-Shaped Fluorescent (30) or HID (10)	**7580K11**	$59.98
4-ft. T12 Fluorescent (60) or 4-ft. T8 Fluorescent (120) or U-Shaped Fluorescent (50) or HID (20)	**7580K31**	119.20
8-ft. T12 Fluorescent (15) or 8-ft. T8 Fluorescent (30)	**7580K21**	65.98
Bucket		
Compact Fluorescent (90)	**7580K41**	95.38

Ballast Recycling Container

Discard your nonleaking magnetic and electronic ballasts quickly and easily. This plastic container holds up to 55 lbs. Use the preprinted address label to ship the ballasts to a recycling facility. The price of the container includes pickup and transportation costs as well as a certificate of recycling once the ballasts are received and recycled.

9710K1 ..... **Each** $110.82

Fluorescent Light Bulb Safety Shields

Prevent broken glass from falling into your work space. These shields slip over bulbs to contain the glass if a bulb breaks. Each has two end caps with holes so it's easy to connect to the bulb holders. Shields are made of transparent polycarbonate, unless otherwise indicated. *Shield for T5 bulbs* works with miniature bi-pin base bulbs; *shields for T8* and *T12 bulbs* work with medium bi-pin base and single-pin base bulbs, unless otherwise indicated. FDA and USDA compliant, and meet OSHA requirements and NEC standards.

Shields for high-output bulbs and ***shields for very-high-output bulbs*** work with recessed double-contact bases.

UV filtering shields are made of transparent acrylic. They filter out rays from 0 to 385 nanometers.

To Order: Please specify color where necessary.

Shields—Sold in packages of 24.

Light Meters

You'll love the easy-to-read LCD screens on these digital meters. They work with most types of visible lights but cannot be used with LEDs or lasers. All include a light sensor, a 3¾-ft. long cable, and a 9-volt battery. Choose from meters with or without a certificate traceable to NIST (National Institute of Standards and Technology).

Basic meters have ±5% accuracy and a ½″ LCD.

Standard meters have ±5% accuracy and a ½″ LCD. Use them to transmit data to a recorder via analog output.

Deluxe meters allow you to select lighting type (tungsten/daylight, fluorescent, sodium, and mercury) for better (±4%) accuracy. They also have a 1⅜″ LCD and an RS-232 output for downloading to a PC (optional Windows 95/98/NT/2000/XP compatible software and RS-232 cable sold separately below).

Standard

	Measurement Range● Footcandles	Lux	Meters	Each	Meters with NIST Certificate	Each
Basic	0-2,000	———	**14855K31**	$93.09	**14855K32**	$172.97
Standard	0-5,000	0-50,000	**14855K41**	144.81	**14855K42**	226.19
Deluxe	0-5,000	0-50,000	**14855K51**	196.53	**14855K52**	288.36

Accessories

Vinyl Pouch Carrying Case for Standard Light Meter	**14855K43**	**Each**	$16.36
Vinyl Pouch Carrying Case for Deluxe Light Meter	**14855K44**	**Each**	$21.81
PC Software and RS-232 Cable for Deluxe Light Meter	**14855K65**	**Each**	$76.35

● Footcandle = one lumen per square foot; lux = one lumen per square meter.

Fluorescent Light Bulb Locking Clips

If you're worried about vibration shaking your light bulbs loose, count on these clips to lock bulbs securely into their holders. Clips are made of natural-color nylon and are CSA certified (8364K14 is also UL listed).

For Bulb and Base Types		Each
T12 (1½″ Dia.) and T8 (1″ Dia.) Medium Bi-Pin	**8364K12**	$2.25
T12 (1½″ Dia.) Single Pin and Recessed Double-Contact (DC)	**8364K14**	3.35

Light Bulb Accessories

For information about light bulbs, see page 682.

Light Diffusers

Smooth

Grooved

Prismatic

Cracked Ice

Egg Crate

Parabolic

Cut these 2 ft. × 4 ft diffusers to size with a saw.

Keep bulbs hidden behind ***smooth***, ***grooved***, ***prismatic*** or ***cracked ice diffusers.*** *Smooth* models reduce shadows and reflected light. *Smooth* and *grooved* models distribute light evenly.

For maximum light output, and free air circulation which cools operating temperature, choose the open cell design of ***egg crate*** or ***parabolic diffusers*** (also called louver panels). *Parabolic* models are mirrored to reflect light and reduce glare.

Acrylic panels have UV stabilizers to prevent yellowing. *Polystyrene* panels are the most economical but have a tendency to yellow over time. *Polyester* panels do not yellow and are stronger than acrylic. *Polycarbonate* panels are suitable for rough-service environments. *Aluminum* panels are more rigid and noncombustible.

■ For use with 18 AWG solid wire.

For information about light bulbs, see page 682.

Light Bulb Sockets, Adapters, and Replacement Parts

Sockets

Without Switch

With Pull Switch and Receptacle

Mount these porcelain sockets to 3¼″ or 4″ outlet boxes. Sockets have screw-terminal connections and an overall diameter of 4½″. Each accepts a medium-base bulb. UL listed and CSA certified.

Socket without switch requires a remote switch. ***Socket with pull switch and receptacle*** has a three-prong grounding receptacle rated 15 amps @ 125 VAC.

	Max. Watts	Max. Volts		Each
Without Switch	660	250	16895K12	$3.58

Light-Absorbing Black-Out Paper

Block light from entering dark rooms, laboratories, and other light-sensitive areas with this paper. Its raised, velvety surface absorbs light. Temporarily mount ***plain-back paper*** using black masking tape (see page 3441). Or, skip the tape and choose ***adhesive-back paper*** for quick, easy mounting.

	Size	Thick.	Pkg. Qty.		Per Pkg.
Plain Back	27″×36″	0.01″	2	9019T1	$32.60
Adhesive Back	20″×30″	0.02″	2	9019T2	34.65

Incandescent Light Bulb Guards

Guards meet OSHA requirements.

Style R opens easily for quick bulb changes. It fits 1⅝″ dia. socket collars. Color is yellow. ***Style S*** fits 1½″ dia. socket collars. ***Style T*** fits 2⅝″ dia. socket collars.

	For Bulb Type	Dia.	Max. Watts	Ht.	OD		Each

Light Filters

Also called gels, these filters block or transmit specific light wavelengths. Use scissors to cut sheets to fit in front of any light source. Max. temperature is 257° F, unless otherwise indicated.

Red, ***blue***, and ***green filters*** allow only the same color lightwave to pass through. ***IR filter*** has a reflective coating that absorbs the infrared spectrum. It's rated for use with up to 1000-watt light sources. ***UV filter*** blocks the transmission of ultraviolet light. ***Polarizer filter*** reduces glare from smooth, reflective surfaces. Max. temperature is 140° F.

Individual Filters

Filter Type	Sheet Size	Thick.		Each
Red	20″×24″	0.002″	7769T1	$14.44
Blue	20″×24″	0.002″	7769T2	14.44

Polarizer	17″×20″	0.006″	7769T6	75.60

Multicolor Filter Pack

Fan out this handy pack and flip through 200 options before choosing the perfect color. Pack measures 1½″×3¼″.

7769T9 ..... Each $5.25

Also Available: Individual colors in 20″×24″ sheets. Please ask for 7769T88 and specify a color number from the filter pack (7769T9).

For information about light bulbs, see page 682. For information about ballasts, see page 702.

Fluorescent Strip Lights

Mount lights under cabinets and shelves. Each has an on/off switch and a removable white ribbed acrylic lens. Housing is steel with white finish; it has two mounting slots (hardware included). Operate on 120 VAC. Choose lights with 5-ft. cord and three-prong plug or lights with hardwire connections. Min. start temp. is 0°F. UL listed.

Bulbs are sold separately (except lights with ballasts for T5 bulbs, which include bulbs). 8342K73 and K74 use two bulbs (one 8-watt and one 13-watt). All bulbs have a light appearance of 4100K (cool, white light). *T5 bulbs* have a miniature bi-pin base; *T8 bulbs* have a medium bi-pin base. For other bulb options, see page 697.

Space Saver Fluorescent Strip Lights

Shown with Optional Reflector and Bulb

Narrow enough to fit in display cases or underneath shelves and cabinets, lights mount individually or end-to-end (mounting hardware included). Housing is steel with a white finish. Lights have knockouts for hardwire connections, operate on 120 VAC, and include an electronic instant-start ballast (min. start temp. is 50° F). UL listed.

Optional reflectors are made of steel with a white finish. They mount onto the fixture and concentrate light in one direction. ***Bulbs*** (sold separately) have a light appearance of 4100K (cool, white light). *T5 bulbs* have a miniature bi-pin base; *T8 bulbs* have a medium bi-pin base. For other bulb options, see page 697.

Plug-In Fluorescent Strip Lights

Trade the hassle of hardwiring for instant illumination. Lights come with a 6″ connecting cable to attach additional lights (up to 60 watts for 3963K22 and up to 130 watts for 3963K24), a 60″ cord, a two-prong plug, and an integral on/off switch. Operate on 120 VAC. Each has a white polycarbonate housing (mounting hardware included) and a snap-in acrylic lens. Electronic instant-start ballast (minimum start temperature is 0°F) included. UL listed.

Bulb is included. Each light uses one T5 (5/8″ dia.) miniature bi-pin base bulb. Light appearance is 4100K (cool, white light).

O'all Size, Lg.×Wd.×Ht.	Lights	Each	Replacement Bulbs Watts per Bulb	Pkg. Qty.		Per Pkg.

DIN-Rail Mount Fluorescent Light

Illuminate your enclosures and control cabinets. Mount this light on a 35 mm DIN rail or use the magnetic back for quick mounting to steel surfaces. It includes a compact fluorescent twin tube bulb and electronic instant start ballast. Has three screw-terminal connections, a switch, and a three-prong outlet rated 15 amps at 120 VAC. Housing is gray polyamide with a protective plastic lens. Size is 14″ Ht.×2½″ Wd.×2¾″ Dp. Meets IP20 for protection from solid objects greater than 12.5 mm in diameter. CE approved.

		Each
Light	9185K5	$139.48
Repl. 9-Watt/600-Lumen Bulb	1528K92	4.26
35 mm Wd. DIN Rail (1 m Lg.)	8961K15	4.96

Ultra-Slim Incandescent Strip Lights

A row of incandescent bulbs lines these extra-slender strip lights, making them ideal for tight spaces. All come with a self-adhesive strip for mounting. They operate on 120 VAC, have a two-prong plug, and can be used with a dimmer. Install the on/off switch (included) anywhere on the 8-ft. cord. UL listed.

Steel housing has a chrome finish. **To Order:** For aluminum housing, please specify black or white finish.

Bulbs (included) last up to 40,000 hours and are not replaceable.

O'all Size, Lg.×Wd.×Ht.	No. of Bulbs	Total Watts	Steel	Each	Aluminum	Each

Xenon Strip Lights

The included xenon bulbs burn cooler and last longer than halogen bulbs and cast warmer light than fluorescent bulbs. Lights have a high/low/off switch. They have an aluminum housing with a white finish (mounting hardware included) and a frosted glass lens. Lights operate on 110 VAC. Choose lights with a 5-ft. cord and two-prong plug or lights with hardwire connections. UL listed.

O'all Size, Lg.×Wd.×Ht.	No. of Bulbs	Lights with 5-ft. Cord	Each	Lights w/Hardwire Connections	Each

18-Watt Replacement Bulb ..... 1657K19 Each $3.00

LED Strip Lights

Save energy and reduce costs with these long-life LED lights. They come with a 7⅜″ connecting cable to attach additional lights, a 5-ft. cord with two-prong plug, and an on/off switch. Housing is aluminum. Mounting brackets and hardware are also included. Operate on 120 VAC. UL listed.

Bulbs (included) last up to 30,000 hours. Light appearance is 5000K (daylight light).

O'all Size, Lg.×Wd.×Ht.	No. of Bulbs	Total Watts	Each
12⅛″×1½″×⅞″	56	5.5	2714K1 $69.73
19″ ×1½″×⅞″	80	6.6	2714K2 86.45

For information about light bulbs, see page 682.

Wall-Mount Fluorescent Lights

A three-sided white acrylic lens lets these lights shine brightly in every direction: up, down, and outward. Housing and ends are made of anodized aluminum (unless noted). Lights include an on/off switch, a 120 VAC rated outlet (for three-prong plug), an electronic ballast for T8 (1″ dia.) bulbs, and knockouts for hardware connections. They operate on 120 VAC. UL listed for damp locations.

Bulbs (sold separately) have a light appearance of 4100K (cool, white light) and a medium bi-pin base. For other bulb options, see page 697.

♣ Housing is aluminum.

Track Lighting

Position this series of lights exactly where you want it, then swivel and slide individual lights along the track for precise beam direction. UL and C-UL listed.

Track lighting kit comes with a 4-ft. aluminum track and three lights (mounting hardware is included, bulbs are not). Track and lights are white. Position the power feed anywhere on the track—it has screw terminals for hardwire connections. Lights operate on 120 VAC and use medium-base R20 incandescent bulbs (75 max. watts) or PAR20 halogen bulbs (50 max. watts). For bulbs, see pages 687-688.

Optional large bulb light comes with an on/off switch. It uses one medium-base PAR30L halogen bulb (75 max. watts), BR30 incandescent bulb (65 max. watts), or standard household A19 incandescent bulb (100 max. watts). For bulbs, see pages 683, 687, and 688.

Recessed Incandescent Lights

Universal Housing

A ***B*** ***C*** ***D*** ***E*** ***F*** ***G***

Create a complete recessed light by pairing a universal housing with the reflector of your choice (each sold separately). Lights have hardwire connections and Romex connectors for easy installation. They operate on 120 VAC. UL and C-UL listed for damp locations; 1495K61 is also UL and C-UL listed for wet locations.

Bulbs are not included, see pages 683, 687, and 688.

Universal Housing

Mount this housing in ceilings with or without insulation (mounting hardware included). Complete housing measures 14⅛″ Lg.×13⅜″ Wd.×7½″ Dp. It requires a 7″ diameter opening and has a 6⅞″ ID. Hanger bars adjust horizontally from 13¼″ to 25¼″.

1495K41 ..... **Each** $12.75

Recessed Fluorescent Lights

Also known as troffers, these lights fit standard suspended T-bar ceiling grids. Each has a steel housing with a white reflective finish and T-bar safety clips to secure the light in place. Lights have knockouts for hardwire connections and operate on 120/277 VAC. Minimum start temperature is 0°F. For replacement diffusers, see page 706. UL listed.

Prismatic diffusers are acrylic and disperse light evenly. ***Parabolic diffusers*** are aluminum and aim light directly at your work surface to avoid light scatter and reduce glare.

Lights have electronic ballasts. *Rapid-start ballasts* are best for applications that require many on/off switches per day. *Instant-start ballasts* light the bulb immediately and are best for applications that require few switches per day.

Bulbs (sold separately) have a light appearance of 4100K (cool, white light) and a medium bi-pin base. For other bulb options, see page 697.

♦ Uses U-shaped bulbs.

Surface-Mount Fluorescent Lights

Surface mount one light individually or several end-to-end. Lights can also be stem mounted. Mounting hardware is not included. Each has a steel housing with a white enamel finish, plus a prismatic acrylic lens. Lights have knockouts for hardwire connections and operate on 120 and 277 VAC. They use T8 (1″ dia.) bulbs. UL listed.

Lights have electronic ballasts. *Rapid-start ballasts* are best for applications that require many on/off switches per day. *Instant-start ballasts* light the bulb immediately and are best for applications that require few switches per day.

Bulbs (sold separately) have a light appearance of 4100K (cool, white light) and a medium bi-pin base. For other bulb options, see page 697.

♦ Uses U-shaped bulbs.

Wraparound Lens Fluorescent Lights

Brighten large areas with these lights—their wraparound lens allows light to shine from both sides as well as the bottom. Lights have a prismatic acrylic lens and a steel housing with a white finish. They have knockouts for hardwire connections and operate on 120 and 277 VAC. Lights can be surface mounted. The 48″ long lights and 48¾″ long damp-location lights can also be stem mounted. Mounting hardware is not included. UL listed.

Damp-location lights are UL and C-UL listed for damp locations. Mount on walls or ceilings. ***Wet-location lights*** are UL and C-UL listed for wet locations on covered ceilings only.

Rapid-start and *programmed-start ballasts* are best for applications that require many on/off switches per day. *Instant-start ballasts* light the bulb immediately and are best for applications that require few switches per day.

Bulbs (sold separately) have a light appearance of 4100K (cool, white light). *T8 bulbs* have a medium bi-pin base; *T5 bulbs* have a miniature bi-pin base. For other bulb options, see page 697.

Plug-In Exposed-Bulb Fluorescent Lights with Reflector

Get all the portable, plug-in convenience of a shop light plus industrial-grade toughness with these lights. They have a steel housing with a white finish and come with two 9″ hanging chains for mounting. Each light has a three-prong plug and a pull switch. They operate on 120 VAC. UL listed.

Rapid-start ballast is best for applications that require many on/off switches per day. *Instant-start ballast* lights the bulb immediately and is best for applications that require few switches per day.

Bulbs (sold separately) have a light appearance of 4100K (cool, white light) and a medium bi-pin base (unless noted). For other bulb options, see pages 696-697.

● Uses bulbs with recessed double-contact (DC) base.

Exposed-Bulb Fluorescent Lights

Hang these lights overhead—individually or in rows—and they'll cast even illumination throughout a large area. Housing is steel with a white finish. Surface or suspension mount (mounting hardware not included). Lights operate on 120/277 VAC and have knockouts for hardware connections. UL listed.

Instant-start ballasts light the bulb immediately and are best for applications that require few on/off switches per day. *Rapid-start* and *programmed-start ballasts* are best for applications that require many on/off switches per day. *Ballasts for high-output bulbs* provide more light.

Bulbs (sold separately) have a light appearance of 4100K (cool, white light) and a medium bi-pin base (unless noted). For other bulb options, see page 697.

★ Uses bulbs with single-pin base. ● Uses bulbs with recessed double-contact (DC) base.

Exposed-Bulb Fluorescent Lights with Reflector

The ballast and electrical hardware are tucked out of the way in the top portion of these lights, making bulb changes simple and leaving room for the steel reflector to provide maximum light output. Also called turret lights, they have a steel housing with a white finish and can be surface or suspension mounted (mounting hardware not included). Lights have knockouts for hardware connections and operate on 120/277 VAC (unless noted). UL listed.

Heavy duty lights have reflector end caps and pressure-lock bulb holders.

Lights with solid-top reflectors reflect all light downward. ***Lights with uplight reflectors*** have openings that allow 8-10% of light to escape, so they provide more ambient light and reduce glare.

Rapid-start and *programmed-start ballasts* are best for applications that require many on/off switches per day. *Instant-start ballasts* light the bulb immediately and are best for applications that require few on/off switches per day. *Ballasts for high-output bulbs* provide more light.

Bulbs (sold separately) have a light appearance of 4100K (cool, white light). *T12* and *T8 bulbs* have a medium bi-pin base (unless noted), and *T5 bulbs* have a miniature bi-pin base. For other bulb options, see pages 696-697.

★ Uses bulbs with single-pin base. ● Uses bulbs with recessed double-contact (DC) base. ♣ Operates on 277 VAC only.

Wet-Location Fiberglass Fluorescent Lights

Equipped with a one-piece impact-resistant fiberglass housing with full gasketing, these lights are protected from moisture and dirt. They also have corrosion-resistant latches. Housing is white. Lights can be surface or suspension mounted (mounting hardware not included). Not for use in hazardous environments. Lights have knockouts for hardwire connections (unless otherwise indicated) and operate on 120/277 VAC.

Lights can withstand liquid dripping, splashing, or falling. Mount on covered ceilings only. All are UL listed for wet locations.

Lights for T8 bulbs have a shatter-resistant translucent acrylic lens, and ½″ NPT female conduit connections. *Lights for T5 bulbs* have a shatter-resistant clear prismatic polycarbonate lens.

Instant-start ballasts light the bulb immediately and are best for applications that require few on/off switches per day. *Rapid-start* and *programmed-start ballasts* are best for applications that require many switches per day.

Bulbs (sold separately) have a light appearance of 4100K (cool, white light). *T8 bulbs* have a medium bi-pin base (unless noted), and *T5 bulbs* have a miniature bi-pin base. For other bulb options, see page 697.

Damp-Location Steel Fluorescent Light

Moisture, dirt, and dust stay sealed out of this light—its lens fits flush against the housing and is secured by latches. Lens is clear acrylic and housing is steel with a white finish. Light can be surface or stem mounted (mounting hardware not included). It has knockouts for hardwire connections and operates on 120 VAC. Light has an electronic ballast and uses T8 (1″ dia.) bulbs. UL listed for damp locations.

Bulbs (sold separately) have a light appearance of 4100K (cool, white light) and a medium bi-pin base. For other bulb options, see page 697.

Harsh Environment Fluorescent Lights

IP66 rated for protection from power jets of water, these lights are resistant to water, weather, dust, and corrosion. Use them both indoors and out. Lights have an off-white polycarbonate housing and a clear prismatic polycarbonate lens. They can be surface or suspension mounted (mounting hardware included). Lights have knockouts for hardwire connections and operate on 120/277 VAC. ETL listed and CSA certified to UL marine standard 595.

Bulbs (sold separately, unless noted) have a light appearance of 4100K (cool, white light). *T8 bulbs* have a medium bi-pin base; *T5 bulbs* have a miniature bi-pin base. For other bulb options, see page 697.

✓ Bulbs are included.

Wet-Location Tubular Fluorescent Lights

Tough enough for food processing environments and other corrosive areas, these lights are NSF C-2 certified to withstand 1200 psi in washdown applications. Lights have an impact-resistant, nonyellowing tubular acrylic lens with silicone gaskets and Type 304 stainless steel end caps. A white aluminum reflector maximizes illumination, and stainless steel mounting straps easily move to align with beams or joists for direct and chain mounting. Lights have hardwire connections and operate on 120/277 VAC. ETL and C-ETL listed for wet locations.

Bulbs (sold separately) have a light appearance of 4100K (cool, white light). *T12 bulbs* have a recessed double-contact (DC) base; *T8 bulbs* have a medium bi-pin base. For other bulb options, see pages 696-697.

Vandal-Resistant Wet-Location Fluorescent Lights

Tamper-resistant Torx screws protect these lights against vandals. They attach the gasket and lens to the white steel base plate. You'll need a T20 pin-in-head Torx driver to remove screws (see pages 2848-2850). Lens is impact-resistant clear prismatic polycarbonate.

Lights operate on 120/277 VAC (unless noted) and have knockouts for hardwire connections and mounting (mounting hardware not included). They have an electronic ballast and use T8 (1″ dia.) bulbs. ETL and C-ETL listed for wet locations on indoor and outdoor covered ceilings (unless noted).

Bulbs (sold separately) have a light appearance of 4100K (cool white light) and a medium bi-pin base. For other bulb options, see page 697.

♥ Operates on 120 VAC. UL and C-UL listed for wet locations on indoor and outdoor covered ceilings.

Wet-Location Wall-Mount Fluorescent Lights

A sealed steel housing keeps out contaminants and up to 10 psi of sprayed water. Lights are ideal for wet environments and Class 100 to Class 100,000 clean rooms. They have a white finish and a clear prismatic acrylic lens. Lights operate on 120/277 VAC and have knockouts for hardwire connections. Each has an electronic ballast and uses T8 (1″ dia.) bulbs. UL and C-UL listed for wet locations on indoor and outdoor covered ceilings.

Bulbs (sold separately) have a light appearance of 4100K (cool white light) and a medium bi-pin base. For other bulb options, see page 697.

Hazardous-Location Fluorescent Lights

Lights have an electronic ballast (unless noted).

A Stainless Steel Surface-Mount Lights—UL 844 and C-UL listed for Class I, Div. 2, Groups A, B, C, and D hazardous locations; UL 1598A listed for marine duty. Lights have a corrosion-resistant Type 304 stainless steel housing for use in washdown applications, plus a fully gasketed clear acrylic lens secured with Type 304L stainless steel latches. Reflector is white aluminum. Lights operate on 120/277 VAC. They have hardwire connections and ¾″ NPT female conduit mounting hubs on both ends. Surface mount using included hardware.

B Tubular Surface-Mount Lights—UL 844 listed for Class I, Div. 1, Groups C and D; Class I, Div. 2, Groups A, B, C, and D; Class II, Div. 1 and 2, Groups E, F, and G; Class III hazardous locations; UL 1598A listed for marine duty. Lights have a corrosion-resistant aluminum housing for use in washdown applications, plus an aluminum reflector and impact- and heat-resistant glass tubes that protect bulbs. They have a ½″ NPT female conduit hub and hardwire connections. Lights operate on 120/277 VAC, except 8335K31, which operates on 120 VAC. Surface mount, unless noted. Mounting hardware is not included.

C&D Recessed Lights—ETL and C-ETL listed Class I, Div. 2, Groups A, B, C, and D; Class II, Div. 2, Groups F and G hazardous locations. These lights are designed for recessed mounting (mounting hardware included) in wet and damp locations such as paint spray booths. They're made of steel with a white baked enamel finish and have a clear tempered glass lens that is gasketed to seal out vapors, dust, and moisture. Each has two electronic ballasts and hardwire connections. Lights operate on 120 VAC, except 16375K43 and K41, which operate on 120/277 VAC. Open *single-access models* (Style C) through the back door panel. Open *dual-access models* (Style D) from both sides—through a hinged door on the front (two doors on 16375K45 and K46) and a back door panel. The front-access door has a safety interlock switch that can be wired to disable equipment (such as paint sprayers) when door opens.

Bulbs are sold separately, except Style B lights include bulbs. Bulbs have a light appearance of 4100K (cool white light) and a medium bi-pin base (unless noted).

● Uses bulbs with recessed double-contact (DC) base. ▲ Has a magnetic ballast. ♣ For ceiling mounting only. ★ Uses bulbs with single-pin base.

Incandescent Canopy Hood Lights

These lights can take the heat . . . and the grease and water, too. They're commonly used in commercial cooking hoods. Each has a tempered glass lens and an aluminum faceplate. Surface mount (mounting hardware not included). Lights operate on 120 VAC. UL listed, CSA certified, and meet requirements for NEC (National Electrical Code) 410 and NFPA (National Fire Protection Association) 96. Bulbs are sold separately.

Metal Halide and High-Pressure Sodium Bay Lights

Low-Bay Complete Unit

Ballast

Low-Bay Reflector with Lens

Aluminum High-Bay Reflector

Acrylic High-Bay Reflector

Enclosed and Gasketed High-Bay Reflector

Hanging Hook

Lens for High-Bay Reflector

Meet the demands of your industrial and warehouse applications with these energy-efficient lights. ***Complete bay lights*** come ready for installation. To design and assemble your own bay light, choose from ***individual bay-light components***.

Metal halide lights produce a crisp, white light. *High-pressure sodium lights* produce a yellowish light and are more energy efficient than metal halide lights.

Complete Bay Lights

Hardwire these lights to ¾″ NPT male conduit and mount with the included hardware. All operate on 120/208/240/277 VAC and come furnished with a 400-watt ballast, reflector, and bulb (see individual components for detailed descriptions). Complete lights are UL listed. They are also CSA certified when used on 120 or 277 VAC systems. *Low-bay lights* come with a nonyellowing acrylic lens hinged and latched to their white aluminum reflector. Lenses for *high-bay lights* are sold separately (see individual components).

Reflector Type	O'all Size, Dia. × Ht.	Metal Halide	Each	High-Pressure Sodium	Each
Low Bay	23⅛″ × 26⅛″	1807K23	$292.77	1807K13	$286.58
High Bay Aluminum	14¼″ × 23⅝″	1807K21	242.67	1807K11	198.74
High Bay Acrylic	22½″ × 27⅛″	1807K22	331.75	1807K12	247.08

Individual Bay-Light Components and Replacement Parts

Compatible with Hubbell brand bay lights only. Build your own bay light or replace existing parts with our selection of components.

Ballasts— All have Class H insulation and a white, die cast aluminum housing. Hardwire them to ¾″ male NPT conduit and mount with included hardware. Ballasts operate on 120/208/240/277 VAC. All are UL listed for 131° F ambient operation and damp locations. They're also CSA certified when used on 120 or 277 VAC systems. Bulbs are sold separately.

Watts	Ballasts	Each	Bulbs	Each
Metal Halide— *Min. Start Temperature –20° F*				
175	14815K41	$177.33	8352K49	$48.31
250	14815K42	169.75	1970K26	55.17
400	14815K43	168.00	1970K13	48.31
1000	14815K32	275.00	8352K64	53.70
High-Pressure Sodium— *Min. Start Temperature –40° F*				
150	14815K33	144.42	8352K54	24.93
250	14815K37	153.83	8352K55	24.93
400	14815K38	153.83	8352K56	24.45
1000	14815K39	344.67	8352K57	90.03

Low-Bay Reflectors — Mount these white aluminum reflectors on ceilings lower than 25 ft. They'll provide wide light distribution without casting harsh shadows. An acrylic, nonyellowing lens is hinged and latched to each reflector.

Dia. × Ht.	Low-Bay Reflectors with Lens	Each	Replacement Lenses	Each
23⅛″ × 17½″	14815K54	$121.75	14815K61	$64.57
29⅛″ × 19⅝″	14815K58	184.15	14815K62	90.69

Hanging Hook— The bottom threads into a ballast, and the top has a hook for suspension mounting. It has a ¾″ NPS male connection. CSA certified.

14815K81 ..... **Each** $8.17

High-Bay Reflectors— Mount these reflectors on ceilings 25 ft. or higher.

Aluminum models have small openings along the top of each dome that allow light to shine upwards, as well as down. Adjustable reflector brackets let you switch between narrow and wide light distribution.

Acrylic model is made of lightweight nonyellowing acrylic. It produces wide uniform light with minimal glare. Adjustable brackets let you switch between medium and wide light distribution.

Note: Aluminum and acrylic high-bay reflectors listed above require a lens (sold separately) when used with 175- and 250-watt metal halide ballasts unless they're used with a bulb that is rated for open fixtures.

Enclosed and gasketed model has an enclosed design that prevents dust, dirt, and grime from clouding your light. A glass lens is hinged and latched to the white aluminum reflector. UL listed for damp locations.

Reflector for 1000-watt ballast is made of aluminum.

Optional lenses are an economical alternative to using metal halide light bulbs that are rated for use in an open fixture. All are glass except for 14815K75, which is acrylic.

Reflector Type	Dia.	High-Bay Reflectors	Each	Optional Lenses	Each
Aluminum	14″	14815K52	$33.21	14815K71	$26.03

Enclosed and Gasketed	19″	14815K53	113.30	14815K73	38.88
For 1000-watt Ballast	23″	14815K57	85.09	———	———

Hazardous-Location Low-Bay Lights

Durable by design, these lights can handle your toughest environments. Each has a white aluminum reflector and a fully gasketed acrylic lens to seal out dirt, dust, and moisture. Ballast housing is aluminum. Lights have knockouts for hardwire connections and can be ceiling mounted using three ¾″ NPT female hubs or stem mounted (mounting hardware included). They're designed for ceilings less than 20 ft. high. Overall size is 14¾″ Dia. × 14¼″ Ht. UL listed for wet locations and Class I, Div. 2/Zone 2, Groups A, B, C, and D. IP65 rated. NSF and CSA certified. Bulbs are included.

Fluorescent lights have programmed rapid-start electronic ballasts.

Operating Voltage	Min. Start Temp.	Lights	Each	Repl. Bulbs	Each

Thread the bottom of this hook into a ballast. It has a ¾″ NPS male connection and a hook on top for suspension mounting.

Lithonia Model No.		Each
HKMU	2135T41	$13.14

For information about light bulbs, see page 682.

Fluorescent Bay Lights

You'll get instant illumination from these fluorescent lights rather than waiting for metal halide alternatives to warm up. Lights have knockouts for hardware connections and operate on 120/277 VAC. Furnished with a programmed-start ballast, unless otherwise indicated.

Lights for T8 bulbs are designed for ceilings 15 ft. or lower. *Lights for T5 bulbs* are designed for ceilings 15 ft. or higher.

Lights with exposed bulbs provide the most brightness. Suspension mount using the included hanger. Models *for T8 (1″ dia.) bulbs* have a white steel housing and an instant-start ballast. Models *for T5 (5/8″ dia.) bulbs* have a white aluminum housing. All are UL and C-UL listed for damp locations.

Lights with louvers reduce glare. They have a white steel housing and can be surface or stem mounted (mounting hardware not included). *Narrow light distribution* models are best used in aisles and racks. *Standard light distribution* models are better for open areas.

Bulbs (sold separately) have a light appearance of 4100K (cool white light). *T8 bulbs* have a medium bi-pin base; *T5 bulbs* have a miniature bi-pin base.

Incandescent Ceiling Lights

A white-painted reflector directs 85% of light downward. The reflector is aluminum and has a reinforced beaded edge. Lights operate on 120 VAC and have a 10-ft. 18/3 AWG cord for hardware connections (hardware for mounting to an electrical box is also included). Bulb is not included. Lights are ETL listed for damp locations.

O'all Size, Dia. × Ht.	Lights Each	Bulbs Max. Watts	Pkg. Qty.	Per Pkg.

Incandescent Wall Light

Thanks to its frosted translucent polycarbonate lens, this light casts a soft, even glow. Housing is black polycarbonate. Mount over a standard recessed electrical box (mounting hardware included). Light has hardware connections and operates on 120 VAC. Bulb is not included. UL listed for wet locations.

O'all Size, Ht. × Wd. × Dp.	Light Each	Bulb Watts	Pkg. Qty.	Per Pkg.
9 1/8″ × 6 1/8″ × 7 1/4″	14755K73 $58.76	100	2	1728K91 $7.18

Metal Halide and High-Pressure Sodium Wall Lights

All of these lights have hardware connections and operate on 120/208/240/277 VAC, unless noted. Lights are UL and C-UL listed for wet locations, unless noted.

Standard— Equipped with a prismatic glass lens and a bronze-colored aluminum housing. Mount lights over a 4″ round or single-gang electrical box. Lights accept mogul-base bulbs, unless noted.

Vandal Resistant— A heavy duty prismatic polycarbonate lens and bronze-colored polycarbonate housing withstand abuse and the elements. Lens and housing are attached to a rustproof marine-grade aluminum base plate with tamper-resistant Torx screws. To remove screws you'll need a T20 pin-in-head Torx driver; see pages 2848-2850. Mount over 3″ round electrical boxes. Lights accept medium-base bulbs.

Bulbs are included (unless noted). *Metal halide* bulbs produce crisp white light. *High-pressure sodium* bulbs produce yellow light and are more energy efficient than metal halide bulbs.

● Operates on 120/277 VAC only. ★ UL listed for wet locations and CSA certified. Has socket for bulb with medium base. ♣ Operates on 120 VAC only. ▲ Bulb is not included.

Impact-Resistant Dusk-to-Dawn Wall Lights

Protected by a heavy duty polycarbonate lens, these lights withstand abuse. A photo-eye sensor automatically turns them on at dusk and off at dawn. Their bronze-colored polycarbonate housing mounts over a standard recessed electrical box (mounting hardware included). Lights have hardware connections and operate on 120 VAC. Bulbs are included.

Fluorescent light is UL listed for wet locations and C-UL listed. ***High-pressure sodium lights*** are UL listed for wet locations and CSA certified.

Vandal-Resistant Wall and Ceiling Lights

A

B

C

An impact- and tamper-resistant exterior protects these lights from vandals. Each light has a clear prismatic polycarbonate lens, has tamperproof screws, and is fully gasketed. You'll need a T15 pin-in-head Torx driver to remove screws (see page 2849). Lights are ideal for heavy traffic, high-abuse areas both indoors and out. They can be mounted over a standard electrical box (mounting hardware not included). Lights operate on 120 VAC (high-pressure sodium lights also operate on 277 VAC) and have hardware connections. UL and C-UL listed for wet locations. Bulbs are sold separately.

Styles A and *B* have a white steel housing. *Style C* has a bronze-colored aluminum housing.

Wet-Location Lights

Ceiling Mount

Wall Mount

Stem Mount

Moisture, dirt, and insects are no match for these lights. All are gasketed to resist moisture, have a heat-resistant glass globe, and are suitable for indoor and outdoor use. Lights have hardwire connections, have female threaded hubs for conduit connections (see listing for thread type and size), and operate on 120 VAC. Mounting hardware is not included. *Note:* These lights are not recommended for hazardous locations.

Bulbs are not included, unless otherwise indicated.

Aluminum lights have rugged construction with stainless steel hardware. UL listed for wet locations and C-UL listed.

Ceiling and *wall lights* include a 4″ dia. electrical box for mounting.

Aluminum vaportight lights have rugged construction with stainless steel hardware. Minimum start temperature is 0° F. Lights include a plug-in compact fluorescent bulb and a 6″ dia. electrical box for mounting. UL listed for wet locations and C-UL listed.

Fiberglass vaportight lights are rated NEMA 4X, so they're made to perform in dusty, wet, and corrosive environments. CSA certified to UL standards for marine luminaries.

Ceiling and *wall lights* have a built-in 4″ dia. electrical box for mounting.

Hazardous-Location Incandescent Lights

Ceiling Mount (1576K13)

Wall Mount (1586K87)

Use these lights indoors and out. Each has an aluminum housing, a heat-resistant glass globe, and a ¾″ NPT female conduit hub for hardware connections. Bulbs are sold separately.

Class I, Div. 1 Hazardous-Location Lights— These lights are a great choice for refining and manufacturing plants, marine loading and fuel transfer terminals, and other wet locations. Housing is rated NEMA 4X for corrosion resistance and has a tan finish. Lights operate on up to 250 VAC. UL listed for Class I, Div. 1 and Div. 2, Groups C and D; Class II, Div. 1 and 2, Groups E, F, and G; and Class III, Div. 1 and 2. CSA certified.

Ceiling light has 5⁄16″ dia. mounting holes; *wall light* has ¼″ dia. mounting holes.

Class I, Div. 2 Hazardous-Location Lights— Suited to illuminate walkways, tunnels, loading docks, exits, and stairwells. Housing has a gray finish. Lights operate on 120 VAC. UL listed for Class I, Div. 2, Groups A, B, C, and D. They're also CSA certified and rated NEMA 4.

Ceiling and *stem lights* use the ¾″ NPT female conduit hub for mounting; *wall light* has 9⁄32″ dia. mounting holes.

✓ Bulbs for 120 VAC. For 250 VAC (100 max. watts), please order 8358K45 (page 684).

For information about light bulbs, see page 682.

Dusk-to-Dawn Wall/Pole Lights

A photo-eye sensor automatically switches these lights on at dusk and off at dawn. Lights have an open-bottom acrylic lens, a gray aluminum housing, and an 18″ curved arm. Use included bracket to mount lights on poles and walls. Lights operate on 120 VAC and have hardwire connections. Minimum start temperature is –40°F. Lights accept a high-pressure sodium bulb (included). UL listed for wet locations and CSA certified.

O'all Size, Dia.×Ht.	Lights	Each	Repl. Bulbs Watts		Each

Underwater Light with Stand

Safely illuminate and inspect storage tanks, pools, fountains, and ponds. This freestanding light has a cast bronze housing and height-adjustable swivel stand; stainless steel fasteners; a silicone gasket; and a clear tempered-glass lens with rock guard. It operates on 120 VAC and has a 10-ft. submersible cord with wire leads. UL and C-UL listed for fountains and decorative pools.

Bulb is sold separately. Bulb listed is an incandescent 250-watt BR38 bulb. Light accepts up to 250-watt medium-base BR38, BR40, and R40 incandescent bulbs, and up to 150-watt medium-base PAR38 incandescent and halogen bulbs. For other bulbs, see pages 687-688.

O'all Size, Dia.×Ht.	Light	Each	Bulb Watts		Each
7⅝″×11″-14″	14845K68	$657.35	250	1509K51	$23.65

Dusk-to-Dawn Floodlight

A built-in sensor automatically turns this light on at dusk and off at dawn. Light has a gray die cast aluminum housing and two bulb heads that swivel 180°. It comes with a built-in electrical box for surface mounting (mounting hardware included). Light operates on 120 VAC and has hardwire connections. UL and C-UL listed for wet locations.

Bulbs are sold separately. Bulb listed is an incandescent 150-watt PAR38 bulb. Light accommodates two 75- to 150-watt medium-base incandescent bulbs. For other bulbs, see page 687.

O'all Size, Ht.×Wd.×Dp.	Light	Each	Bulb Watts		Each
2¾″×14″×2″	8300K2	$15.62	150	1532K53	$20.76

Floodlights with Motion Sensor

Standard

Quartz Halogen

Motion detected within a 70-ft., 180° scanning radius triggers these lights to turn on. You can adjust lights to stay on from 4-12 minutes. Both models have a weather-resistant polycarbonate motion sensor and a bronze-colored die cast aluminum housing. Wall-mount lights over a 4″ round recessed electrical box (mounting plates and hardware included). UL and C-UL listed for wet locations.

Standard light has two bulb heads and accepts one 150-watt medium-base halogen or incandescent bulb per head. Bulbs are sold separately. Bulb listed is an incandescent 150-watt PAR38 bulb. For other bulbs, see page 687.

Quartz halogen light accepts one 300-watt quartz halogen bulb. Bulb is included.

Quartz Halogen Floodlights

Dual Swivel Head

Visored Lens

High Wattage

Select one of these economical models to meet your floodlighting needs. Each has a die cast aluminum housing, tempered-glass lens, and ½″ NPS male adjustable mounting stem. Mount lights on a wall (mounting hardware not included, unless otherwise indicated) or a pole (for pole mounting, choose the *pole-top mounting bracket* sold separately below). Lights have hardwire connections and operate on 120 VAC unless otherwise indicated.

Single and Dual Swivel Head— Bulb heads move up and down. Housing is bronze colored. Wall-mounting hardware and bulbs are included. UL and C-UL listed for wet locations.

Visored Lens— The visor reduces glare and protects the lens. Swivel arm allows fixture to move up and down. Light has a bronze-colored housing and includes a bulb. UL and C-UL listed for wet locations.

High Wattage— Stainless steel latches allow easy access for bulb replacement (bulb is sold separately). Housing is gray. UL listed and CSA certified for wet locations. 1594K62 operates on 208/220/240/277 VAC. Bulb listed is for 240 VAC. For 277 VAC, please order bulb 1513K42.

● Uses two bulbs.

Hazardous-Location Metal Halide and High-Pressure Sodium Floodlights

These floodlights are UL listed for Class I, Div. 2, Groups A, B, C, and D hazardous locations and UL 1598A listed for outdoor salt water marine duty. Each has a heavy duty die cast aluminum housing, a shock-resistant tempered-glass lens, corrosion-resistant hardware, and a bracket with three 9/16″ dia. mounting holes. Housing is bronze-colored. Lights operate on 120/208/240/277 VAC and have a built-in electrical box with ¾″ NPT female conduit connection for hardwiring. The hinged cover makes bulb changes easy.

Bulbs are sold separately. Metal halide bulbs provide crisp white light. High-pressure sodium bulbs produce yellow light and are more energy efficient than metal halide bulbs.

O'all Size, Ht.×Wd.×Dp.	Lights	Each	Bulbs Watts		Each
Metal Halide— *Min. Start Temperature –20°F*					
16¼″×17¼″×7 9/16″	14555K2	$358.45	175	1970K31	$39.93
16¼″×17¼″×7 9/16″	14555K3	378.80	400	8352K53	51.58
High-Pressure Sodium— *Min. Start Temperature –40°F*					
16¼″×17¼″×7 9/16″	14555K1	387.93	400	8352K56	24.45

Metal Halide and High-Pressure Sodium Floodlights

Equipped with a bronze-colored die cast aluminum housing, silicone gasket, and tempered-glass lens, these lights also have a hinged cover that provides easy access for hassle-free bulb replacement. All have hardwire connections.

Metal halide lights produce crisp white light. *High-pressure sodium* lights produce yellow light and are more energy efficient.

Compact lights have a hinged stem with 1/2″ male NPSM (National Pipe Straight Mechanical) threads for flexible positioning. *Metal halide* lights operate on 120/277 VAC; *high-pressure sodium* lights operate on 120 VAC. UL and C-UL listed for wet locations.

Medium lights have a bracket with one 7/8″ dia. and two 11/16″ dia. mounting holes. They operate on 120/208/240/277 VAC. CSA certified for wet locations.

Large lights have a bracket with one 7/8″ dia. and two 9/16″ dia. mounting holes. Reflectors produce a wide horizontal beam of light. They operate on 120/208/240/277 VAC. UL listed and CSA certified for wet locations.

Also Available: Large metal halide lights for 480 VAC operation. Please ask for 8421K88 and specify watts: 400 or 1000.

Pole Mount for Medium and Large Floodlights	8421K22	Each	$39.11
Wall Mount for Medium and Large Floodlights	8421K21	Each	$87.50

Walkway Lights

Watch your step with the help of these lights. Also known as bollard lights, they shine low-intensity, glare-free lighting. Both have a seamless bronze-colored aluminum housing and a polycarbonate lens. Lights have hardwire connections and come wired for 120 VAC. They can also operate on 208/240/277 VAC. Minimum start temperature is –20°F. Bulbs are sold separately. CSA certified for wet locations.

Metal halide lights produce crisp white light. *High-pressure sodium* lights produce yellow light and are more energy efficient.

Round lights measure 7″ Dia. × 43 3/8″ Ht. and include a 7″ dia. mounting plate with mounting hardware. They have a 7 1/2″ high lens.

Square lights measure 7″ Sq. × 41″ Ht. and include a 7″ square mounting plate with mounting hardware. They have a 6″ high lens.

120-Volt Landscape Lights

Accent groundwork plus provide safety and security. A swivel stem lets you position the light. Lights operate on 120 VAC. UL listed for wet locations. For bulbs (sold separately) see pages 687-688.

Style E has a 6-ft. cord with three-prong plug, a gray die cast zinc housing, and a spike for ground mounting. It uses one 75- to 150-watt medium-base PAR38 incandescent bulb.

Styles F and ***G*** have a gray die cast aluminum housing and 1/2″ NPT male arm for mounting. Lights have hardwire connections. They use one medium-base PAR38 incandescent or halogen bulb. Style F accepts up to a 250-watt bulb; Style G accepts up to 300 watts.

Accessory H is a black PVC mounting stake with a 1/2″ NPS female bushing and ground wire. ***Accessory J*** is an aluminum mounting box.

12-Volt Landscape Lights

Provide night visibility and security for paths, walkways, and steps with these low-voltage lights. Lights, transformers, and cable are all sold separately. C-UL listed.

Lights have a black (unless noted) aluminum alloy housing and stainless steel fasteners. A polyester powder coat finish helps lights withstand outdoor conditions. Lights come with a bulb. *Models K, L, M,* and *P* are for ground mounting. *Model K* comes with three 6″ anchor rods. *Models L, M,* and *P* have detachable ground stakes. *Model N* is for wall mounting (mounting hardware included). *Models K* and *N* can be surface mounted.

Low-voltage transformers provide safe operation. They have a timer that automatically turns lights on and off, an on/off override switch, and a three-prong plug for any 120 VAC outlet. *Note:* Make sure the total bulb wattage does not exceed the transformer wattage.

Emergency Lights with Plastic Housing

Count on our economical impact- and corrosion-resistant lights to provide 1½ hours of emergency illumination. Lights have a low-voltage disconnect feature to prevent battery discharge and a test switch. Each light has two bulb heads and a white thermoplastic housing, unless otherwise indicated. Lights operate on 120/277 VAC, have hardwire connections, and include sealed lead-calcium batteries, unless otherwise indicated.

(A) Standard— Lights have an acrylic lens and stationary bulb heads. Furnished with krypton bulbs. Surface mount using included universal mounting plate. *Light with cord and plug* has a 6-ft. cord with two-prong plug. All are UL listed and meet ADA fixture specifications when properly installed.

(B) With Semirecessed Bulb Heads— The eyeball-style bulb heads are less likely to suffer damage because they are semirecessed in the housing. Light has a glass lens and comes with halogen bulbs and a sealed lead-acid battery. Wall mount using included universal mounting plate. UL listed and meets ADA fixture specifications when properly installed.

(C) With Swiveling Bulb Heads— Heads swivel to direct light. All have a polycarbonate lens and come with krypton bulbs. Surface mount using included universal mounting plate. 1474K26 is perfect for lighting systems with long restart times because it stays on for up to 17 minutes after power is restored. All are UL listed and meet ADA fixture specifications when properly installed.

(D) With Wet-Location Enclosure— This light resists splashing water, plus damp and corrosive conditions. Housing and bulb heads are gray thermoplastic. Bulb heads have a glass lens and swivel 360°. Furnished with high-intensity tungsten bulbs. Wall mount using included hardware. ETL listed.

♥ When adding bulb heads, do not exceed this maximum. At this wattage you get 1½ hours of emergency light.

Emergency Lights with Steel Housing

Triggered by their brownout activation feature, these lights turn on when voltage drops. All have a beige steel housing (unless noted), two fully adjustable bulb heads, a test switch, maintenance-free sealed lead-calcium batteries, and low-voltage disconnect feature to prevent battery discharge. Lights operate on 120/277 VAC and have hardwire connections, unless otherwise indicated. Bulbs are included. UL listed and New York City approved.

Style E has polycarbonate bulb heads and lenses and uses high-intensity tungsten bulbs.

Style F has a low-profile design, so it fits into tight spaces. It has polycarbonate bulb heads and lenses and uses incandescent bulbs.

Style G lights have steel bulb heads. *8-watt light* uses incandescent bulbs. *12-watt light* uses halogen bulbs and is City of Chicago approved.

Style H is designed for use with lighting systems that have a long restart time. It can be adjusted to provide light for up to 60 minutes after power is restored. It has steel bulb heads and uses halogen bulbs. City of Chicago approved.

Style J has a 3-ft. cord with three-prong plug. It has steel bulb heads and uses incandescent bulbs.

Style K lights have an ammeter that displays the condition of the battery and charger. Housing is beige with a woodgrain panel. They have steel bulb heads and use incandescent bulbs.

Style L lights have a brown housing. They have steel bulb heads and use halogen bulbs.

♥ When adding bulb heads, do not exceed this maximum. At this wattage you get 1½ hours of emergency light.

Rechargeable Night Light

Plug this light into your wall and it will provide up to 13 hours of continuous light during a power failure. It turns on in the dark and off when light is detected. Overall size is 1⅞″ Ht. × 5¾″ Wd. × 1⅞″ Dp. Light has three rechargeable NiMH batteries and an incandescent bulb. Operates on 110 VAC. UL and C-UL listed.

Light	1663K44	Each	$15.98
Replacement Batteries (2/Pkg.)	6762K43	Per Pkg.	$11.74

Corrosion-Resistant Washdown and Hazardous-Location Emergency Lights

Built to resist corrosion, washdowns, and other harsh environments, these lights have a fully gasketed housing and fully adjustable polycarbonate bulb heads. They have a brownout activation feature that turns lights on when the voltage drops, a low-voltage disconnect feature to prevent battery discharge, and a test switch. They operate on 120/277 VAC. Lights can be wall mounted (mounting hardware not included).

(A) For Indoor Use— Housing is gray fiberglass. Lights have hardwire connections. Furnished with a sealed lead-calcium battery (8369K44 comes with two) and two PAR36 halogen bulbs.

(B) For Indoor/Outdoor Use— Housing is gray fiberglass. Lights have hardwire connections. Furnished with two NiCad batteries and a built-in heater to keep the batteries from freezing when used in temperatures as low as 14° F. Two PAR36 halogen bulbs are included.

(C) Hazardous-Location for Indoor Use— Equipped with a gray fiberglass-reinforced polyester housing, these lights are UL 924 listed and meet Class I, Div. 2, Groups A, B, C, and D; and Class II, Div. 2, Groups F and G. Lights have an AC current indicator, screw terminal connections, and a 3/4″ conduit hub for easy electrical hookup. Furnished with a sealed lead-calcium battery (15955K61 comes with two) and two PAR36 incandescent bulbs.

♥When adding bulb heads, do not exceed this maximum. At this wattage you get 1 1/2 hours of emergency light.

Emergency Lights and Power Packs with Refillable Battery

All have refillable lead-acid batteries that withstand harsher environments and more extreme temperatures than sealed batteries. Periodically refill the batteries with distilled water to extend battery life.

All lights and power packs have a brownout activation feature that turns them on when the voltage drops, a low-voltage disconnect feature to prevent battery discharge, and a test switch. Housing is steel. UL listed and City of Chicago approved.

Emergency Lights— Have fully adjustable bulb heads, a beige housing, and operate on 120/277 VAC. 1680K1 has hardwire connections; 1680K7 has a 3-ft. cord and three-prong plug. Both lights can be wall mounted (mounting hardware not included) and include incandescent bulbs.

Emergency Power Packs— Mount bulb heads onto the housing using knockouts or hardwire to power multiple remote bulb heads (bulb heads not included). Packs have a brown housing and a battery capacity indicator. They can be wall mounted or placed on the included mounting shelf (hardware not included). Packs operate on 120 VAC and have hardwire connections.

Remote Location Bulb Heads for Emergency Lights

Extend the reach of your emergency light system by adding a remote bulb head. Heads have a polycarbonate housing and pivot for precise light direction. They have two wire leads and are compatible with most emergency lights. Mount to a 3/4″ knockout and secure with included fasteners.

Style E has a Class I, Div. 2 hazardous rating when used with a Class I, Div. 2 rated emergency light.

Fluorescent-Light Emergency Battery Packs

These battery packs automatically turn on when the lights go out, converting your existing fluorescent lights into emergency lights. One pack is wired into your ballast and illuminates one or two bulbs (see chart at right) for a minimum of 1 1/2 hours. They're compatible with most ballasts.

Each includes a maintenance-free sealed NiCad battery (nonreplaceable), an internal constant-current charger, an external test switch, and a pilot light. They operate on 120/277 VAC and are UL listed.

Lumen Output	O'all Size, Lg. × Wd. × Ht.		Each

Stand-Mounted Floodlights

Aim light where you need it—adjust the height of the stands and pivot the light heads horizontally and vertically. Lights have a switch and operate on 120 VAC. All include halogen bulbs.

(A) General Purpose Tripod with Removable Head— Use the head on the tripod or remove it to use as a portable light. Light has a die cast aluminum tubing stand, a glass lens, and an SJTW cord with plug. UL and C-UL listed.

(B&C) Medium Duty Tripod with Removable Head— Use the head on the tripod or remove it to use as a portable light. Lights have a 22-ga. steel tubing stand, a glass lens, and an SJTW cord with plug. Each light head has two independently controlled bulbs. UL and C-UL listed. *Style B* light head is selectable between 250, 500, and 750 watts. *Style C* light heads are selectable between 250; 500; 750; 1,000; 1,250; and 1,500 watts.

(D) Heavy Duty Tripod— Light has a 12-ga. steel tubing stand, a glass lens, weatherproof light heads, and an SJTW cord with plug. ETL and C-ETL listed.

(E) Medium Duty Roll-About— Light has a 16-ga. steel tubing wheeled stand and a tool tray. Lens is glass. Also has a 15-amp duplex GFCI outlet and an SJT cord with plug. ETL and C-ETL listed.

Multi-Mount Floodlights

Hang these lights by their eyelet hook or mount them on ferrous surfaces using the built-in magnet. All have a rugged, corrosion-resistant housing and a polycarbonate gasketed lens. Lights operate on 120 VAC and have a 6-ft. SJTOW cord with plug. Bulbs are included (except 14965K33 requires one bulb that is not included). All lights are ETL listed.

Lights with yellow polycarbonate housing have a watertight seal. *LED* bulbs have a very long life with good impact and vibration resistance. Rated 32 watts and 1,500 lumens.

Long-tube fluorescent light has a handle and comes with an electronic start ballast and two bulbs.

Rechargeable Floodlights

Bring light to the jobsite without the need for outlets or a generator. Lights have rechargeable batteries and long-lasting LED bulbs. Lens is polycarbonate. All have a switch and a low-battery indicator. Include a 120-240 VAC charger.

Hazardous-Location Hand Held— Light is ETL and C-ETL listed for Class 1, Division 1, Groups C and D. Head tilts up and down and has flood and beam modes. Light has a black polypropylene handle and a stainless steel folding swivel hook. Includes a replaceable NiMH battery pack; charges in 10 hours or fast charges in five hours.

Heavy Duty Hand Held— Use this light folded or raise it to any height within its range. Once extended, the head rotates 360°. Light has high and low settings. Head and body are yellow polycarbonate and ABS plastic. Mast is glass-reinforced plastic. Battery is sealed lead acid and charges in seven hours.

Tripod— Adjust the height of the light anywhere within its range. Head rotates 180° and tilts up and down. Light has high and low settings. Head and body are yellow polycarbonate and ABS plastic. Mast is aluminum. Light has an NiMH battery that charges in eight hours.

High-Impact Fluorescent Floodlights

If it were any more resilient, it would bounce. The rubber housing provides impact resistance. Light also has a polycarbonate lens, ratcheting stand, and two 1/2″ dia. mounting holes (fasteners not included). The included 38-watt fluorescent bulb stays cool and is rated at 3,500 lumens. Light operates on 120 VAC and has an SJTW cord with plug. Meets OSHA nonsparking requirements.

Indoor/Outdoor Temporary Lighting

Molded-Vinyl Lighting System

Molded-Rubber Lighting System

Bring safe and effective temporary overhead lighting to the jobsite. Bulb holders come strung with a plug on one end and a female connector on the other end, allowing you to connect systems. Holders have steel wire bulb guards and are spaced at 10-ft. intervals. Systems operate on 120 VAC. Use 150-watt incandescent bulbs, sold separately.

Molded-Vinyl Systems—Each bulb holder has a molded PVC socket and a 1 1/2″×1 5/8″ hole for hanging. Systems have a yellow SJTW cord with plug. UL listed and OSHA approved.

Molded-Rubber Systems—One-piece design has rubber-encased copper sockets and cord. A flexible rubber lip forms a weather-resistant seal around the bulb's neck. Each bulb holder has a 3/8″ dia. hole for hanging. Systems have a yellow SOOW cord with plug. CSA certified.

Lg., ft.	No. of Bulb Holders	Molded-Vinyl Lighting Systems		Molded-Rubber Lighting Systems

Temporary Light Bulb Sockets

Pigtail Holder

Holder with Connection Box

Create a temporary light system or replace your string sockets with our molded-rubber, water-resistant holders. They have two 4 1/2″ 14-ga. wire leads and operate on a max. of 600 VAC. Use with incandescent medium-base bulbs. Holders are CSA certified.

Pigtail Holder—Has a rubber lip that molds around the bulb to form a seal. UL listed.

Holder with Connection Box—Strip your cord wires and connect them to the leads inside the housing. Includes a steel hanger hook, no-stress cord grips, and a steel wire bulb guard.

	Max. Watts		
Pigtail Holder	660	8289K31	$7.05
Holder with Connection Box	200	8289K51	78.54

Halogen Floodlights

Flood your worksite with bright portable light. Rugged and easy-to-carry, light head is aluminum and lens is glass with a wire guard. Lights have a 500-watt halogen bulb rated at 9,500 lumens. They operate on 120 VAC and have an SJTW cord with plug.

(A) Light with Stand—Frame is steel. UL and C-UL listed for outdoor use. ***(B) Clamp-Mount Light***—Jaws open up to 3″. Light has a switch. Frame is die cast aluminum. ETL and C-ETL listed.

	Overall Size Ht.	Wd.	Dp.	Cord Lg.	Lights		Repl. Bulb

B	12″	9″	10″	15 ft.	8430K21	88.00	1513K2	6.49

Hazardous-Location Floodlights

The cast aluminum housing and heat-resistant, 3/4″ thick, rubber-gasketed glass lens withstand abuse in marine and other demanding environments. Base is 12 1/2″ dia. with three 1/2″ dia. holes for mounting (fasteners not included). Height is 15 7/8″. Use with a 150-watt bulb, sold separately. Lights operate on 120 VAC and come with 100 feet of SOW cord. Plug is not included; see 7461K series on page 789.

UL listed for Class I, Div. 1, Groups C and D. CSA certified for Class I, Div. 2, Groups C and D. UL 1598A listed for marine use.

Rechargeable Trouble Lights

Fluorescent

LED

Take these battery-operated lights almost anywhere. They have an impact-resistant plastic bulb shield. Turn on and off with the switch. Include an NiMH rechargeable battery pack, charger, and bulb.

Fluorescent light has an ABS plastic handle and a polycarbonate swivel hook. Size is 2 1/2″ Dia.×15″ Lg. Includes a 12 VDC charger with cigarette-lighter plug and a 120 VAC charger. UL and C-UL listed.

LED light uses LEDs for long life and energy efficiency. It has a nylon 6/6 handle and a steel dual hook that rotates and adjusts up and down. Size is 2″ Dia.×12 1/4″ Lg. Includes a 120 VAC charger.

For information about cord type, see page 808. For more information about light bulbs, see page 682.

About Trouble Light Bulb Types

Incandescent—*Advantages:* Economical to replace and provide a wide spread of light. *Disadvantages:* Bulb is exposed; the bulb and guard can become very hot.

Fluorescent—*Advantages:* Long lasting and energy efficient; provide a wide spread of light; run cooler than other bulbs and have a protective cover. *Disadvantages:* Don't operate well in cold temperatures; more costly to replace than incandescent.

Halogen—*Advantages:* Produce a bright white light; ideal for inspection work. *Disadvantages:* Bulb is exposed; bulb and guard can become very hot; more costly to replace than incandescent.

LED—*Advantages:* Very long life with good impact and vibration resistance. *Disadvantage:* Higher initial cost than other bulbs.

Incandescent Trouble Lights

Hang trouble lights where you need them; a guard protects the bulb from damage. Lights operate on 120 VAC and have a cord with plug (except 1460K91 does not include a cord and plug). Bulbs are sold separately.

Standard—These lightweight lights have a PVC handle with a switch and a 12-amp three-prong outlet. Guard is vinyl-coated metal and has a hook for hanging. Cord is yellow.

Standard with Magnetic Base—Mount with the magnetic base or use the hook for hanging. Lights attach to base with a ball joint for easy positioning. Handle is nylon and has a switch. Guard is steel. Cord is red.

Rough Duty—Lights are impact-, abrasion-, and oil-resistant. Handle is polypropylene and has a switch and a 10-amp three-prong outlet. Guard is steel and has an easy-open design, flat sides to prevent rolling, and a swivel hook for hanging. Cord is yellow. UL listed and CSA certified.

Premium—A one-piece rubber handle provides excellent shock protection. Handle has a switch and a 15-amp three-prong outlet. The guard and hook are vinyl-coated steel. A seal at the bulb base protects from dust. Lights are UL listed. 1460K92 and 1460K93 have a yellow cord and are CSA certified. 1460K91 does not include a cord and plug. For cords, see page 809. For plugs, see page 787.

Incandescent Trouble Lights with Cord Reel

Keep excess cord out of your way—retractable cord reels lock the cord at any length and retract it when not in use. Lights operate on 120 VAC and have a black cord with plug. Bulbs are sold separately.

Standard—Have a swing-open metal guard for easy bulb replacement, a hook for hanging, and a polypropylene handle with switch. Reel is metal with a yellow powder-coated finish and has an eye loop for hanging. *Light with 30-ft. cord* has a 2-ft. feeder cord and a 10-amp three-prong outlet in the handle. UL listed. *Light with 50-ft. cord* has a 7-amp circuit breaker in the plug, a 2-ft. feeder cord, and a 7-amp three-prong outlet in the handle. UL and C-UL listed.

Premium—Made of heavy duty steel, lights have a 6-ft. feeder cord, a steel guard with swivel hook, and an adjustable ball stop. Handle is thermoplastic and has a switch and a 15-amp three-prong outlet. Reel has a yellow powder-coated finish and a 5½″ square mounting plate with three slotted holes for ⅜″ bolts (fasteners not included). UL listed and CSA certified. *Swing mount* moves side to side 150° to 160°.

Handles and Guards for Trouble Lights

Handle

Guard

For use with incandescent trouble lights. Not for use with wet-location or hazardous-location lights.

Handle is plastic and has a switch and a three-prong outlet. Rated at 10 amps when used with 18/3 cord and 13 amps when used with 16/3 cord. ***Swing-open metal guard*** is for handles up to 1⅝″ dia.

	Lg.		
Handle	5¾″	**1559K2**	$6.63
Swing-Open Metal Guard	7″	**1559K3**	5.27

Watertight Incandescent Trouble Lights

Completely enclosed and gasketed to keep water out, lights are rated NEMA 4X for washdown environments. Operate on 120 VAC. Lights have a swivel hook. Bulbs are sold separately. CSA certified.

Lights with tempered glass globe have a rubber handle and a steel guard. 1548K15 and 1548K16 have a yellow cord with plug. 1548K84 does not include a cord and plug. For cords, see page 809. For plugs, see page 787. ***Lights with shatterproof PTFE globe*** withstand abuse and accidental drops. They have a reinforced polyester handle and a yellow cord with plug.

Fluorescent Trouble Lights

An impact-resistant shield protects the bulb, so you can hang these trouble lights without worry. All have a fluorescent bulb and a switch in the handle. Lights operate on 120 VAC and have a cord with plug. ***Rough duty*** lights have a thicker-gauge cord for more demanding applications.

(A&B) Standard— Lights have a swivel hook for hanging. *Style A* has a polypropylene handle and a ballast mounted at the end of the cord that plugs directly into the outlet. Cord is yellow. UL listed. *Style B* has an ABS handle. Cord is black. UL and C-UL listed.

(C) Rough Duty with Magnet and Outlet— Magnet attaches to light with a hook-and-loop band. Mount with the magnet or use the swivel hook for hanging. Handle is nylon and has a 13-amp three-prong outlet. Cord is black. UL listed and CSA certified.

(D) Rough Duty High Output with Angled Handle and Outlet— With two 13-watt bulbs, this is the brightest fluorescent trouble light we offer. Hook ratchets for easy mounting. Handle is nylon and has a 13-amp three-prong outlet. Cord is black. UL listed and CSA certified.

(E) Rough Duty with Adjustable Head, Magnetic Base, and Outlet— This light has an eight-position adjustable head, magnetic base, nylon handle, and 13-amp three-prong outlet. Cord is black. UL recognized.

(F) Premium— A thick rubber handle and end cap provide excellent durability and shock protection. Lights also have a swivel hook and a 2½-ft. cord from an inline ballast to the plug. Cord is yellow. UL listed and CSA certified.

Fluorescent Trouble Lights with Cord Reel

It's easy to keep cords off the floor and out of your way. Lights have a reel that locks the cord at any length and retracts it when not in use. These lights also have a fluorescent bulb, an impact-resistant plastic bulb shield, and mounting fasteners. Operate on 120 VAC. ***Rough duty*** lights have a thicker-gauge cord for more demanding applications.

(G) Standard— A clear lens at the top of these lights lets you inspect tight areas, and a guard protects the rest of the lens from scratches. A dual hook rotates and slides up and down the tube for easy positioning. Handle is PVC and has a switch. Reel is steel and has a 2-ft. feeder cord, an eye loop for hook mounting, and a mounting bracket. UL and C-UL listed. *Light with 20-ft. cord* has a black cord. *Light with 40-ft. cord* has a yellow cord.

(H) Rough Duty with Magnet and Outlet— Use the clip-on magnet to mount the light or the swivel hook for hanging. Handle is ABS plastic and has a switch and a three-prong outlet. Wall- or ceiling-mount the reel with the included bracket. Cord is yellow. ETL and C-ETL listed. *Light with 30-ft. cord* has a steel reel with a black powder-coated finish. The reel has a 2-ft. feeder cord. *Light with 50-ft. cord* has a black ABS plastic reel with a 3-ft. feeder cord.

Halogen Trouble Lights

Standard ***Standard with Cord Reel***

A 900-lumen halogen bulb delivers high-intensity illumination. Mount lights using the swivel hook or the removable magnet. Lights have a 90° swivel head and an ABS plastic handle with switch. They operate on 120 VAC and have a black cord with plug. Supplied with a halogen bulb. UL and C-UL listed.

Standard light with cord reel has a 9¼″ dia. steel reel with a yellow powder-coated finish. Reel locks the cord at any length and retracts it to keep the excess out of your way. It has a swivel hook and a 2-ft. feeder cord.

LED Trouble Lights

with Cord Reel

You'll have the toughness of a trouble light and the convenience of never replacing a bulb. Lights have surface-mounted LEDs for durability and a polycarbonate outer tube for impact resistance. A 90-lumen LED on the end acts as a flashlight. Lights also have a steel dual hook that rotates and adjusts up and down. Handle is PVC and has a switch. Lights operate on 120 VAC and have a yellow cord with plug and a 12-amp outlet inline with the cord. ETL and C-ETL listed.

Standard with Cord Reel— Includes a 9″ dia. steel reel with a white painted finish. The reel locks the cord at any length and retracts it when not in use. It has a 2-ft. feeder cord. Mount the reel using the eye loop or the included bracket and hardware.

Hazardous-Location Incandescent Trouble Lights

This spark- and weather-resistant light is rated for use in hazardous locations. It has a plastic handle, a cord clamp, and a cast aluminum guard with a swivel hook. A tempered glass globe screws into the handle. Light accommodates 16/3 or 14/3 (up to ½″ dia.) SOOW cable. Cord and plug not included; see page 809 for cord and page 789 for plugs.

Light is 16½″ long and operates on 120 VAC. UL listed and CSA certified for Class II, Div. 1, Groups F and G with bulbs up to 75 watts; Class I, Div. 1, Groups C and D with bulbs up to 100 watts. Bulbs are sold separately.

Light	**1545K4**	$384.93

100-watt/945-lumen Bulbs (Pkg. of 2)	**1506K53**	6.20

Low-Voltage Harsh-Environment Incandescent Trouble Lights

Rough Duty

An inline rubber-covered transformer steps down your 120 VAC supply to a safer 12 volts. All lights have a plug, a 10-ft. yellow 16/3 SOOW power cord, and a 25-ft. cord from transformer to light. Supplied with a 75-watt/1,500-lumen incandescent bulb. UL listed and CSA certified.

Rough duty light has a rubber handle and a steel wire guard with swivel hook and reflector.

Watertight light is NEMA 4X rated for washdown protection. It has a rubber handle, a glass globe to seal out water and vapors, and a steel wire guard with a hook. *Note:* Transformer is not rated NEMA 4X.

Hazardous-location light is UL listed for Class II, Div. 1, Groups F and G with a 75-watt bulb; Class I, Div.1, Groups C and D with a 100-watt bulb (sold separately). Light has a rubber handle, glass globe, and an aluminum guard with swivel hook. *Note:* Transformer is not approved for hazardous locations.

75-watt bulb is rated 1,100 lumens. *100-watt* is rated 1,750 lumens.

12-Volt Fluorescent Trouble Lights

Use your vehicle or a battery pack to power this low-voltage light. It has a cigarette-lighter plug at the end of a 20-ft. yellow 18/2 SJTOW cord. Operates on 12 VDC. Light has an impact-resistant shield, protective PVC end caps, and a switch. A steel dual hook rotates and slides up and down the outer tube for easy positioning. Overall size is 2″ Dia.×13¼″ Lg. UL and C-UL listed.

Light	**15045K31**	$58.06
Repl. 13-watt/825-lumen Bulb	**1528K51**	4.26

Impact-Resistant Fluorescent Trouble Lights

Single Hook *Single Hook with Cord Reel* *Double Hook*

Drops, falls, and rough handling won't stop the illumination. Lights have heavy plastic shields and neoprene end caps and handles for impact resistance. This construction also makes them weather resistant. All operate on 120 VAC. A fluorescent bulb is included. Lights are FM approved.

Single Hook— Lights have a swivel hook for hanging. They also have a 25-ft. yellow 18/2 SJOW cord with an inline ballast.

Single Hook with Cord Reel— Lights have a swivel hook for hanging, a 40-ft. yellow 18/3 SJO cord, and a 9½″ dia. steel reel. Ballast is on the reel. Reel has a 2-ft. feeder cord and an eye loop for hanging.

Double Hook— Hold these lights by their comfortable grip or mount them with the two clip-on hanging hooks. Lights have a 25-ft. yellow 18/3 SJOW cord with plug. Ballast is built into the handle.

Hazardous-Location Fluorescent Trouble Lights

Compact Fluorescent

Fluorescent

Aluminum bodies and guards, rubber bumpers and supports, and annealed glass shields give these lights excellent impact, spark, and shock resistance. The lights have a hook and a fluorescent bulb. They operate on 120 VAC. All have a yellow 16/3 SOOW cord; plugs are not included (see page 789 for plugs).

Fluorescent Lights— Have an inline ballast. FM approved. Meet National Electrical Code (NEC) Class I, Div. 1 and 2, Group D; Class II, Div. 1 and 2, Groups E, F, and G; and Class III, Div. 1 and 2.

Compact Fluorescent Lights— Ballast is built into the handle. Meet NEC Class I, Div. 1, Groups C and D; Class II, Div. 1, Groups E, F, and G; and Class III, Div. 1. Lights are also NEMA 4 rated for washdowns and CSA certified.

Dock Lights

Horizontal Swivel

Universal Swivel

Horizontal Swivel

Universal Swivel LED

Universal Swivel with Spring Arm

Good lighting is essential at loading docks—swivel these heavy duty lights to direct light wherever you need it. Lights are made of 1½″ steel tubing with a safety-yellow finish. They have a bulb guard (except LED lights), a switch, and a cord with plug. Supplied with a mounting bracket that has four holes for ⅜″ dia. bolts (fasteners not included). Lights operate on 120 VAC.

Horizontal Swivel—Lights swing out from the wall horizontally.

Universal Swivel—A wrist-action joint allows for vertical and horizontal positioning and provides some impact resistance if the light is bumped.

Universal Swivel with Spring Arm—An inline heavy duty steel spring in the arm provides extra impact resistance.

Incandescent lights have a steel head and use PAR38 bulbs (sold separately). UL and C-UL listed.

Fluorescent lights have an aluminum head and include an energy efficient compact spiral bulb that doesn't get as hot as an incandescent bulb. ETL and C-ETL listed.

Halogen lights have an aluminum head. They include a 500-watt bulb that is brighter than an incandescent bulb. ETL and C-ETL listed.

LED lights have an aluminum head with integrated LEDs for long life and energy efficiency. Lens is acrylic. Brightness is 775 lumens. Lights are appropriate for use in food distribution facilities. UL listed.

Gooseneck Dock Lights

The flexible stainless steel neck gives you endless positioning options and withstands sudden impact. Lights have a welded steel housing, a fan-cooled aluminum light head, a switch, and a cord with plug. They operate on 120 VAC.

Halogen light has a 4″ dia. head and includes a halogen bulb. It has four 7/16″ dia. mounting holes (fasteners not included).

LED light has a 3¼″ dia. head and long-lasting LEDs rated for 85,000 hours. It has four ½″ dia. mounting holes (fasteners not included).

Wet-Location Dock Lights

Made of aluminum with a gasketed head to keep shining in wet environments, indoors and out. Lights have two arms with a universal swivel joint for horizontal and vertical positioning, a protective lens, and a wire bulb guard. They also have a switch with a ½″ trade size conduit connection and three screw-terminal connections; operate on 120 VAC.

Supplied with a 20″ Lg.×5″ Wd. wall bracket that has eight holes for ½″ dia. bolts (fasteners not included). Bracket and swivels are corrosion-resistant zinc-plated steel. The swing arm has a chemical-resistant powder-coated finish. Use with incandescent bulbs (sold separately). UL listed for wet locations. CSA certified.

Wet-Location Compact Fluorescent Machine Lights

Need a machine light for a wet location but have limited space? These are smaller than tubular fluorescent machine lights and have a sealed housing for protection from dust, splashing water, washdowns, and oil/coolant dripping and splashing. Housing is aluminum with a black finish; lens is acrylic. Lights have a switch and operate on 120 VAC. They have an 8-ft. power cord with plug and a 7-ft. cord connecting the light to the inline ballast. A T-slot on the back accepts a ¼″-20 square-head bolt for mounting (bolt not included). Bulbs are included.

About Workstation and Machine Lights

Machine Lights—Permanently attach these lights to machines.

Gooseneck Lights—Have a shorter arm than adjustable-arm lights but greater flexibility. Ideal for confined work spaces.

Adjustable-Arm Lights—With longer arms than gooseneck lights, these offer more lighting options for larger areas. They also typically hold their position better than gooseneck lights, which is a consideration in high-vibration areas.

Incandescent bulbs are economical to replace and provide a wide spread of light. ***Fluorescent bulbs*** are long lasting and energy efficient; they run cooler than other bulbs. ***Halogen bulbs*** produce a bright white light. ***LED bulbs*** have very long life with good impact and vibration resistance.

For more information about light bulbs, see page 682.

Machine Lights & Gooseneck Lights

For information about NEMA and IP ratings, see page 843.

Wet-Location Tubular Fluorescent Machine Lights

A *17″ Overall Length*

B *29″ Overall Length*

C *18″ Overall Length*

Mount directly to machines in wet locations. Bulbs and mounting fasteners are included.

All lights have a 2¾″ OD clear tube with black end caps. ***Plastic tubes*** are best for water-only areas. ***Glass tubes*** resist discoloration and are for applications involving water as well as heat and chemicals.

(A) Water-Resistant Lights—NEMA 13 rated to protect from water, oils, and coolants. UL listed. The *17″ long lights* have an internal ballast and a 9-ft cord with plug. *20″ long lights* have a remote ballast and include a switch and a 13-ft. cord with plug.

(B) Hardwired Water-Resistant Lights—NEMA 13 rated to protect from water, oils, and coolants. ETL and C-ETL listed. The *29″ long light* has a remote ballast with four 2-ft. long 18-ga. leads from the light to the ballast and 2-ft. long 18-ga. leads from the ballast for hardwiring. The *low-voltage 23″ long light* has an internal ballast and two 2-ft. long 18-ga. leads for hardwiring.

(C) Waterproof Lights—The tube end caps are gasketed at each end to provide IP67 water washdown protection. Lights have a built-in reflector and internal ballast. All have an 8-ft. cord with plug. ETL and C-ETL listed.

Screw-In Bulb Gooseneck Lights

Position these lights at any angle—they have arms that flex. All have a switch and operate on 120 VAC. Lights accept one incandescent, compact fluorescent, or LED bulb with a standard screw-in base. Bulbs are sold separately.

(D) Lights have a 9-ft. cord with plug. Color is black. UL listed. *Clamp-mount lights* fit surfaces up to 2¾″ thick. *Screw-mount light* has two ¼″ dia. holes for mounting (fasteners not included).

(E&F) Lights have an aluminum heat sink that keeps the shade and switch from getting too hot. All have a 6-ft. cord with plug. Include a mounting kit with a screw-mount surface base and a wall bracket (fasteners included). UL and C-UL listed. *Style F lights* are right-angle. They extend horizontally from the base or wall bracket; great for mounting over a machine.

To Order: For Styles E&F, please specify color: beige, black, or gray.

Accessories for Styles E&F—Bases are black. **To Order:** For replacement shade, please specify color: beige, black, or gray.

Fluorescent Gooseneck Lights

While incandescent and halogen gooseneck lights can get hot, fluorescent lights keep their cool. All have a flexible arm for easy positioning and use cool-running, energy-efficient fluorescent bulbs. Lights have a switch and operate on 120 VAC. Color is black.

(A) Weighted-Base Lights— Have a 9-ft. cord with plug. UL listed.

(B) Magnetic-Base and ***Clamp-Mount Lights with Handle—*** Have a handle on the shade for easy positioning and a 9-ft. cord with plug. *Clamp-mount light* fits surfaces up to 2¾″ thick.

(C) Screw-Mount Light— Has a 6-ft. cord with plug. Mounting fasteners are included. UL listed.

(D) Clamp-Mount Light with Adjustable Head— Fits surfaces up to 2¼″ thick and has a 7-ft. cord with plug. UL listed.

Halogen Gooseneck Lights

Focus brilliant white light on any small area in your workspace. All lights have a flexible arm for easy positioning and include a halogen bulb. Lens is glass. Lights have a switch and operate on 120 VAC. Color is black. *Clamp-mount lights* fit surfaces up to 2¾″ thick.

(E) Standard Lights— Have a 9-ft. cord with plug. UL listed.

(F) Water-/Oil-Resistant Lights— Have a sealed lamp head and a 7-ft. cord with plug. *Screw-mount light* includes mounting fasteners.

(G) Water-/Corrosion-Resistant Lights with Handle— Rated IP54 for water splash protection. A handle on the shade allows easy positioning and the beaded arm provides the ultimate in precise positioning and holding power. Lights have a 5-ft. cord with plug.

LED Gooseneck Lights

Bend the flexible arm to shine LED light on your work; LEDs outlast other bulbs, consume less power, and resist impact and vibration. All shades have a corrosion-resistant black coating.

(H) Standard Lights— Have a switch and operate on 120 VAC. They have a 9-ft. cord with plug. Rated IP60 for protection from dust. *Clamp-mount light* fits surfaces up to 2¾″.

(J) Water-Resistant Focused-Beam Light— Rated IP65 for water projected from a nozzle. The light has a universal base with four 3/16″ dia. mounting holes (fasteners not included); mount directly to your work surface or use accessories (sold separately) for more mounting options. Light has a switch and operates on 100-240 VAC. It has an 8-ft. cord with plug.

(K) Waterproof Light and ***Waterproof Focused-Beam Light—*** Rated IP67 for water wash-downs. Lights have a universal base with four ¼″ dia. mounting holes (fasteners not included); mount directly to your work surface or use accessories (sold separately) for more mounting options. Have an 8-ft. cord. Choose from 95-240 VAC lights, which have a plug, and 24 VAC/VDC lights, which require hardwiring. **To Order:** Please specify voltage: 95-240 VAC or 24 VAC/VDC.

For information about IP ratings, see page 843. For information about workstation and machine lights, see page 727.

Screw-In Bulb Adjustable-Arm Lights

The arm stays in position until you decide to move it. Lights have a switch and operate on 120 VAC. They accept one incandescent, compact fluorescent, or LED bulb with a standard screw-in base. Bulbs are sold separately.

(A) Screw-Mount Light with Mini Arm— Has a swivel head, a vented shade to dissipate heat, and a 9-ft. cord with plug. Color is black. Mounting fasteners are included. UL listed.

(B) Magnetic-Base Light with Mini Arm— An oil-resistant shade makes this light great around machine tools. Mount it to ferrous surfaces. Light has a short swivel arm, a vented shade to dissipate heat, and a 9-ft. cord with plug. Color is gray. UL recognized.

(C) Weighted-Base Light— Has a 5-ft. cord with plug. Color is black. UL listed.

(D) Clamp-Mount Lights— Have a 5-ft. cord with plug. Color is black. UL listed. 1650K51 fits surfaces up to 1½″ thick and has a vented shade to dissipate heat. 1650K71 fits surfaces up to 2¼″ thick.

(E) Clamp-Mount Light with Handle— The shade is vented to dissipate heat and has a handle for easy positioning. An internal reflector produces evenly diffused light and keeps the shade cooler. Light fits surfaces up to 2¾″ thick and has a 9-ft. cord with plug. Color is black.

(F) Screw-Mount Lights— Have a vented shade to dissipate heat and an 8-ft. cord with plug. Color is gray. Mounting fasteners are included. ETL and C-ETL listed.

(G) Screw-Mount Light with Cool-Touch Shade— A heat-shield shade snaps onto the lamp head and stays cool to the touch. Light has an 8-ft. cord with plug. Color is gray. Mounting fasteners are included. ETL and C-ETL listed.

Fluorescent Adjustable-Arm Lights

Angle the arm to brighten your workspace with energy-efficient fluorescent light. The arm holds its position. Lights have a switch and operate on 120 VAC. Bulbs are included.

(H) Weighted-Base Light— Has an 8-ft. cord with three-prong plug. Color is light gray. UL listed.

(J) Weighted-Base/Clamp-Mount Light— Comes with a base mount and a clamp mount for surfaces up to 2½″ thick. Has a 5-ft. cord with plug. Color is black.

(K) Clamp-Mount Lights— Fit surfaces up to 2¼″ thick. 1625K8 and 1625K6 have a 7-ft. cord with plug. UL and C-UL listed. 1625K9 has a 5-amp three-prong outlet in the base and a 5-ft. cord with plug. UL listed. **To Order:** For 1625K8 and K6, please specify black or gray; for 1625K9, please specify black or white.

(L) Clamp-Mount Fluorescent/Incandescent Light with Handle— Using two types of bulbs provides a more natural light. Each bulb has its own switch, so you can use fluorescent light, incandescent light, or both. Clamp fits surfaces up to 2½″ thick. Light has a handle on the shade for easy positioning, a 4.5-amp three-prong outlet in the base, and a 5-ft. cord with plug. UL listed. **To Order:** Please specify black or white.

(M) Screw-Mount Light— Has a plastic lens and an 8-ft. cord with plug. Mounting fasteners are included. Color is gray. ETL and C-ETL listed.

(N) Water-Resistant Screw-Mount Light— Has gasketing to keep out water, coolant, dust, and debris. IP54 rated for water splash protection. Light has a polycarbonate lens and a 6-ft. cord with plug. Base has four 15⁄64″ dia. mounting holes (fasteners not included). Color is gray.

Halogen Adjustable-Arm Lights

Direct bright, white halogen light anywhere you need it. Lights have a switch (except Style G) and a glass lens. Bulb is included. *Styles A-E* have a built-in transformer (Style E transformer is inline with the cord) and operate on 120 VAC. *Style F* is 12 volt. *Style G* is 24 volt.

(A) Weighted-Base Light— Base dia. is 5⅞″. Light has low and high settings and a 5-ft. cord with plug. Color is black. UL listed.

(B) Clamp-Mount Light— Has an aluminum reflector to diffuse light evenly. Clamp fits surfaces up to 2¾″ thick. Light has a 7-ft. cord with plug. Color is silver.

(C) Clamp-Mount Light with Dimmer— Use the dimmer to control the brightness of the light. Clamp fits surfaces up to 2½″ thick. Light has a 7-ft. cord with plug. Color is black. UL and C-UL listed.

(D) Screw-Mount Light with Handle— The light head is IP65 rated to protect against water projected from a nozzle. Light has a protective heat shield to dissipate heat, a handle on the shade for easy positioning, and a 6-ft. cord with plug. Color is gray. Mounting fasteners are included. UL listed.

(E) Water-Resistant Screw-Mount Light with Handle— The entire light is IP65 rated to protect against water projected from a nozzle. A double glass lens creates a heat barrier that prevents fluids from baking onto the lens. The shade has a handle for easy positioning. Light has a 15-ft. cord with plug. Body is silver; light head is black. Mounting fasteners are included.

(F&G) Low-Voltage Screw-Mount Lights— Must be hardwired to a transformer (sold separately) to connect to 120 VAC. Lights have protective shields to dissipate heat. Color is black. Mounting fasteners are included. *Style F* is 12 volt. *Style G* is 24 volt. It is UL and C-UL listed and IP65 rated to protect against water projected from a nozzle.

Fiber-Optic Illuminators, Cables, and Adapters

Get high-intensity illumination for microscopy and small-parts work. A complete system requires the illuminator, a cable, and an adapter (each sold separately).

Illuminator— Stays cool to the touch and includes a 150-watt halogen bulb. It has an on/off switch and a knob to control light intensity from 0% to 100%. Light appearance is 3250 Kelvin. Housing is made of light gray impact-resistant ABS plastic. It has a recessed carrying handle and a side panel for easy bulb changing. Bulb life is up to 200 hours. Operates on 120 VAC and has a 7-ft. power cord with plug. UL and C-UL listed.

PVC-Coated Cables— Connect to illuminator with an adapter (sold separately). Cables consist of optical fibers inside a steel monocoil, covered with a PVC sheath for flexibility.

Steel-Jacketed Cables— Connect to the illuminator with an adapter (sold separately). Crush and kink resistant, the steel provides extra protection for the optical fibers while still allowing flexibility. *Flexible cables* are made of stainless steel for added corrosion resistance. *Gooseneck cables* allow precise positioning of the light.

Adapters— Required to connect the illuminator's nosepiece to cable. Made of aluminum.

Accessories— *Probes for ⅛″ dia. fiber-optic bundle* illuminate small areas that have recessed or deep orifices. Probes are made of stainless steel. *Focusing lens for gooseneck cables* concentrates the light beam for more focused illumination. Vary the light spot diameter by sliding the lens along the cable sheath tip.

Vehicle Lights

Position the pedestal mount to shine light where you need it.

(A) Lights have a weather-resistant rubber housing. The head moves horizontally and vertically. Have two 12″ 16-ga. wire leads and come with a 5/16″ bolt and nut for mounting. Bulbs are included. UL recognized as components for lift trucks.

(B) Housing is aluminum with a black finish. The head moves vertically. Light has two 12″ 18-ga. wire leads and comes with an M8 bolt and nut for mounting. Bulbs are included. Light is rated IP67 for protection against dust and temporary submersion.

(C) Housing is steel with a black finish and has a lens guard. The head moves horizontally and vertically. Lights include two 7-ft. 16-ga. wire leads and a 3/8″ fastener and nut for mounting. Bulbs are included. UL recognized as components for lift trucks.

(D) Light has a weather-resistant rubber housing. Head moves horizontally and vertically. Includes two 12″ 16-ga. wire leads and a 1/2″ bolt and nut for mounting. Use an incandescent bulb (sold separately). Bulb listed is 12.8 volts.

Optional mounting angle-bracket for Styles A-C enables you to mount a light to a truck mast or overhead guard. It has two 0.34″ dia. holes (fasteners not included).

Vehicle-Mount Spotlights

Screw Mount — *Screw Mount with Handle Control* — *Magnetic Mount*

Illuminate any spot around your vehicle. Lights rotate 360° horizontally and 180° vertically. All operate on 12 VDC. Bulb is included.

Screw-Mount Spotlight— Made of chrome-plated brass/zinc. Light has a switch, a 5-ft. 16-ga. wire lead, and a 3″ dia. screw-mount bracket (fasteners included).

Screw-Mount Spotlight with Handle Control— Aim the spotlight from inside your vehicle with the interior control handle and fingertip switch. Head is plastic; shaft is metal. Shaft length inside vehicle is 7 1/8″. Includes a 6-ft. 16-ga. wire lead, a roof bracket (fasteners included), and a mounting template.

Magnetic-Mount Spotlight— Base is magnetic for easy mounting and removal on metal surfaces. Made of chrome steel. Light has a switch and a 10-ft. cord with 12-volt cigarette-lighter plug.

10-ft. extension cable for magnetic-mount spotlight has a 12-volt cigarette-lighter plug.

Spot/Floodlights

Great for inspections and temporary lighting, these lights accommodate a spot or flood bulb. They have a steel bulb guard, a switch, and a rubber handle. Choose the light head only or light head with a 16/3 SJTW cord and plug. For use with PAR38 bulbs (sold separately)—a 90-watt halogen bulb or a 23-watt, 1,200 lumen compact fluorescent bulb. Lights have a 5 3/4″ dia. head and are 11 13/16″ long. Operate on 120 VAC.

Light Head Only

Light Head Only	**8408K12**	$60.10
Light Head with 25-ft. Cord	**8408K22**	126.98
Light Head with 50-ft. Cord	**8408K32**	132.96

PAR38 Compact Fluorescent Flood Bulb	**1685K98**	32.40
Replacement Bulb Guard	**8408K41**	38.10

Water-Resistant Spotlights

Completely sealed to keep out moisture. All lights have a 4 1/2″ dia. polycarbonate lens with a neoprene seal and a polypropylene handle. Plus, the transformer and switch are encapsulated in neoprene. The transformer reduces line voltage to 6 volts, making it ideal for use in tanks and confined spaces. Lights operate on 120 VAC and include a 30-watt incandescent PAR36 sealed-beam bulb rated at 55,000 candlepower.

Spotlight with Reel and Cord

Spotlight with Cord— Has the transformer inline with the cord.

Spotlights with Reel and Cord— Have a 9″ dia. steel reel with a 6-ft. SJO feeder cord. Reel includes brackets for mounting to wall or ceiling (fasteners not included). Transformer is on the side of the reel.

Spotlight with 56-ft. SJO Cord	**8423K11**	$379.25

Hand-Held Spotlights

12-Volt Battery Adapter

Your work takes center stage as you direct the focused beam. Spotlights are 12 volt and include a bulb. Housing is ABS plastic.

(E&F) Rechargeable Spotlights— Powered by the included rechargeable battery or the included 12-volt cigarette-lighter adapter, which can be used for charging. *Style E* has a 12-volt battery and charges in 6 hours. It also includes a 120 VAC adapter for charging. Color is black. *Style F* has a NiCad battery pack and charges in 3 to 4 hours. Color is gray. ***(G) Corded Spotlight—*** Has a 10-ft. cord with 12-volt cigarette-lighter plug. Color is black.

Lanterns

A

B

C

D

E

F

Compared to ordinary flashlights, lanterns are typically brighter and have a longer battery life. Batteries not included, except Style B comes with a battery.

(A) All-Direction Lantern— Provides 360° lighting. A three-position rotary switch lets you turn on one or both fluorescent bulbs. Housing is weather-resistant black rubber.

(B) Floating Lantern— Housing is polypropylene. Push-button operation.

(C) Floating Lantern with Stand— Allows hands-free light positioning. Housing is yellow high-density polyethylene. Rotary-switch operation.

(D) Submersible High-Output Lantern— Light is submersible to 500 feet. Has a spare bulb stored underneath the reflector. Housing is yellow ABS plastic. Rocker-switch operation.

(E) Hazardous-Location High-Output Lantern— FM approved Class I, Div. 2, Groups C and D, Temp. T1. Includes a dual-filament bulb; when one filament burns out, switch to the other. The handle is removable, so you can change the grip to pistol style. Housing is yellow ABS plastic. Has a three-position switch.

(F) Hazardous-Location Floating Lantern— UL listed Class I, Div. 1 and 2, Groups C and D. MSHA approved. Housing is orange polypropylene. Push-button operation.

Rechargeable Lanterns

G

H

J

K

Charge the included batteries and you're ready to go—without the hassle of bringing along fresh batteries. Lanterns are typically brighter and have a longer battery life than ordinary flashlights.

(G) Light Duty Lantern— Plug into a 120 VAC outlet to charge; lantern has a built-in charger and a fold-away plug. Housing is white ABS plastic. Slide-switch operation. UL listed.

(H) Lantern with Fold-Away Plug— To charge, plug into any 120 VAC outlet; lantern has a built-in charger and a fold-away plug. Housing is white ABS plastic. Slide switch to operate between on, off, and standby. UL listed.

(J) Long-Run Lanterns— Get up to nine hours of light on a single charge. Lanterns come with a 120 VAC charger and a 12 VDC charger with cigarette-lighter plug. The head swivels 120° vertically and 300° horizontally. Housing is orange ABS plastic. Push the button to operate. Lanterns include a wall-mount rack and mounting fasteners. *Standard lantern* has a shoulder strap. When plugged in, the *emergency lantern* turns on when power is interrupted. CE approved.

(K) High-Output Lantern— With a rating of 710 lumens, this is our brightest lantern. Push the button to switch between high, low, and strobe settings. The head swivels 120° vertically. Housing is black ABS plastic. Comes with a 120 VAC charger and a shoulder strap. Meets NFPA 1901 for automotive fire apparatus.

Super-Bright Focused-Beam Aluminum Flashlights

High Beam
8446T1

Rechargeable High Beam

Highly engineered optics and a bright LED provide far-reaching brightness required by law enforcement and military personnel. Also known as tactical flashlights, they have an O-ring for water resistance and a knurled handle for a secure grip. Body is one piece and made of aluminum with a black finish. Batteries are included.

High-Beam Flashlights— 8446T1 has a tail-button switch for constant and momentary high, low, and strobe light. Comes with a lanyard. 8446T2 has a switch on the side for high, medium, low, momentary, and strobe light.

Rechargeable High-Beam Flashlight— Light has a switch on the side for high, medium, low, momentary, and strobe light. Includes a 120 VAC charger and a 12 VDC charger with cigarette-lighter plug. Charge time is three hours.

Flashlight Type	Battery Type (Qty.)	Battery Life, hrs.	Lumens	Bulb Type	Beam Distance, ft.	Dia.	Lg.

Aluminum Flashlights

You'll recognize the distinctive feel of the tough aluminum body of these flashlights. Turn the head to adjust the light beam from flood to spot. All are water resistant. **To Order:** Please specify color where necessary.

(1&2) Mini Flashlights— Small enough to fit in your pocket. All have a spare bulb in the base cap. Twist-head operation. Batteries are included.

(3) Standard Flashlights— Have a sealed three-position switch. Base has a spare bulb. Batteries not included.

(4) Rechargeable Flashlight— Charges in 16 hours. Includes a 120 VAC charger and a 12 VDC charger with cigarette-lighter plug. Push-button operation. NiMH battery pack is included.

LED/tail-button kit for mini flashlight with AA-cell batteries allows you to replace the Xenon bulb in your flashlight with a 30-lumen LED bulb. Also includes a push-button switch to replace the end cap.

LED kit for standard flashlights with four-to-six D-cell batteries allows you to replace the Krypton bulb in your flashlight with a 700-lumen LED bulb. Has three brightness settings.

Long-Life LED Aluminum Flashlights

The same tough aluminum body as our Aluminum Flashlights, but with long-lasting LED bulbs. LEDs have a high light output and good impact and vibration resistance. Turn the head to adjust the light beam from flood to spot. **To Order:** Please specify color where necessary.

Mini Flashlight— Slip this light into your pocket for quick access. Twist-head operation. Batteries are included.

Standard Flashlights— Have push-button operation. Batteries are included with 2036K7 and K8.

Rechargeable Flashlight— Has a 120 VAC charger and charges in two hours. NiMH battery pack is included. Also can operate on three C-cell batteries (not included). Push-button operation.

High-Impact Plastic and Rubber Flashlights

Built to withstand impact and resist corrosion and shock. Batteries not included.

(A) Standard Polypropylene Flashlights— Have slide-switch operation. *Flashlight with magnet* has a magnet on the side opposite the switch so you can mount the flashlight for hands-free use.

(B&C) Water-Resistant Rubber and ***Polypropylene Flashlights—*** Have a push-button switch.

(D) Waterproof ABS Plastic Flashlight— An LED bulb and special reflector provide a high-output beam with low battery drain. Twist-head operation. ETL listed for Classes I, II, III, Div. 1, Groups A, B, C, D, F, and G.

(E) Waterproof Mil. Spec. ABS Plastic Flashlight— Slide-switch operation. Includes four lenses that store in the base: blue, red, white, and a diffusion lens to provide a broader beam. Meets MIL-F-3747.

Mini Flashlights

You don't have to sacrifice brightness for a compact design—mini flashlights offer both. Batteries are included.

(A) Plastic Disposable Flashlight— Made of plastic. Has slide-switch operation. Bulb and batteries are not replaceable. CE approved.

(B) Aluminum Easy-Grip Flashlight— Body is aluminum with a black rubber coating. Partially press the tail button for momentary light; fully press the button for continuous on. Head twists to adjust beam from spot to flood. Includes a spare bulb in the base. CE approved.

(C) Aluminum Water-Resistant Flashlights— Body is aluminum with a gray finish; head is Type 303 stainless steel. Partially press the tail button for momentary light; turn the cap for continuous on. *UV light* has an ultraviolet LED that's useful for detecting leaks in piping systems.

(D) Hazardous-Location Water-Resistant Flashlight— Made of black polymer. Partially press the tail button for momentary light; fully press the button for continuous on. ETL listed.

(E) Hazardous-Location Right-Angle Flashlight— Body is waterproof and made of yellow ABS plastic. The head rotates 360°. Partially press the thumb-button switch for momentary light; fully press the button for continuous on. UL and C-UL listed for Class I, Div. 2, Groups A, B, C, and D; Class II, Div. 2, Group G; Class III, Div. 2, Temp. T2A.

(F) Hazardous-Location Rechargeable Flashlight— Body is water-resistant and made of yellow ABS plastic. It has a one-handed flip switch. Includes an NiMH battery pack and a 120 VAC charger. Charges in 2-3 hours. Hard hat attachment sold separately. CSA certified for Class I, Div. 2, Groups A, B, C, and D; Class II, Div. 2, Group G.

Holster with Belt Clip and Hand Strap	D-Cell	10685T35	8.10

For batteries, see page 733.

Hands-Free Lights

Stop fumbling with a flashlight—wear a light on your head or hard hat. Batteries are included.

(A) General Purpose Headband Light—Has push-button operation with high, medium, low, and blinking modes. Head tilts 90°. Made of black plastic and includes an elastic strap.

(B) Hazardous-Location Headband Lights—Have push-button operation. Head tilts 85°. Made of water-resistant black plastic and include an elastic strap. 2048K53 has high, medium, low, and blinking modes. It is UL and C-UL listed for Class I, Div. 2, Groups A, B, C, and D, Temp. T6. 2048K6 has spot and flood modes and is UL listed for Class 1, Div. 1, Groups A, B, C, and D, Temp. T4.

(C) Hazardous-Location Headband Light with Broad Beam—Has push-button operation with a setting for close work and a 1-watt setting you can focus for flood lighting. Head tilts 90°. Made of water-resistant black plastic and includes an elastic strap. UL and C-UL listed for Class I, Div. 2, Groups A, B, C, and D, Temp. T3.

(D) Hazardous-Location Clip-On Light—Clip to your clothing or the bill of your cap—two LEDs light when you flip the head, which swivels 180°. Body is black water-resistant high-impact plastic. UL listed for Class 1, Div. 1, Groups A, B, C, and D, Temp. T6.

(E) Hazardous-Location Headband Light—Has a swivel head and twist-head operation. Includes a visor/clothing clip, headband, hook-and-loop fastener, and magnet. Body is black plastic. FM approved for Class I, Div. 2, Groups A, B, C, and D, Temp. T4. MSHA approved.

(F) Hazardous-Location Waterproof Light—Has a black plastic body and a thumb switch. Hard-hat attachment for hands-free use is sold separately. UL listed for Class I, Div. 2, Groups A, B, C, and D; Class II, Div. 2, Group G; Class III, Div. 2, Temp. T2A.

Inspection Flashlights and Penlights

Illuminate hard-to-view areas. Batteries are included. *Styles G-L* have a flexible wand that bends in any direction and stays put. *Penlights (Styles J-M)* have a pocket clip.

(G) Long-Reach Flashlight—Has push-button operation. Includes an 18″ extension that doubles as a cover. Body is black plastic.

(H) Flashlight—Has a push-button switch with steady on and momentary on/off operation. Body is aluminum with a black finish. Includes a magnetic clip holder.

(J-L) Penlights—Have a push-button switch with steady on and momentary on/off operation. Body is aluminum with a black finish. *Styles K* and *L* are waterproof.

(M) Penlight with Mirror—Has twist-head operation and extends from 7½″ to 30½″. Mirror is 2″ Lg. × 1¼″ Wd. and is removable. Body is nickel-plated brass.

Chemical Lightsticks

No bulbs or batteries needed—bend and shake for instant emergency light. Lightsticks are waterproof, nontoxic, and safe in combustible areas.

Standard-intensity lightstick provides maximum light between 35° and 80° F. Use ***high*** and ***ultra-high intensity lightsticks*** for max. light or in temperatures below 35° F.

To Order: For *standard-intensity lightstick*, please specify blue, green, orange, red, white, or yellow. For *high-intensity lightstick*, please specify red, white, or yellow. *Ultra-high intensity lightstick* is orange.

	Lg.		Each 1-9	Each 10-Up
8-hrs. Standard Intensity	6″	**5712T42**	$2.19	$1.82
30-min. High Intensity	6″	**5712T43**	2.19	1.82
5-min. Ultra-High Intensity	6″	**5712T52**	2.63	2.19

Mini Tripod Lights

When your hands are full, choose a stationary, hands-free light. Both have push-button operation. Lens is polycarbonate. Operate on three AA batteries.

(N) Tripod Light—Stores up to three batteries in each leg. As batteries in the first leg are depleted, it switches to batteries in the second leg and then the third leg. Made of ABS plastic with aluminum legs. Head tilts vertically. Batteries not included.

(P) Flexible Tripod Light with Magnetic Feet—Legs are made of ABS plastic sections with ball-and-socket joints, allowing the legs to wrap around objects. Tripod can stand on its own and has magnetic feet for more mounting options. Head rotates 360° and tilts vertically and horizontally. Has high, medium, low, and strobe modes. Batteries are included.

	Battery Life, hrs.	Lumens	Bulb Type	Dia.	Lg.		
N	90	20	LED	2″	11″	**9023T1**	$16.50
P	20-80	100	LED	2″	7″	**9023T2**	33.33

Battery-Operated Lightsticks

180° Light

360° Light

Liquid- and chemical-free, these reusable lightsticks are water resistant and made of impact-resistant polycarbonate. They have turn-cap operation and an operating life of 3,000 hours. Batteries not included.

180° light has almost twice the light output of the 360° light. Includes hook-and-loop strips for wall mounting.

360° light provides area-wide illumination.

To Order: Please specify blue, green, orange, red, white, or yellow.

	Battery Type (Qty.)	Battery Life, hrs.	Lg.		
180° Light	AA (2)	50	5½″	**5716T1**	$30.91
360° Light	AA (2)	50	5½″	**5716T2**	33.13

Indoor/Outdoor Rope Lights

The bulbs are spaced every inch and coated with a flexible PVC layer that's ½″ in diameter. Lights come in a 30-ft. roll and have a 6-ft. cord with plug, an end cap, and mounting clips (fasteners included, unless otherwise stated). UL listed for indoor/outdoor use.

Incandescent rope light is for use in dry areas. Operates on 110 VAC. ***LED rope light*** is for use in wet and dry areas. Operates on 120 VAC. Fasteners not included. This product is energy efficiency compliant in all states as of July 1, 2011.

To Order: Please specify clear, blue, green, orange, red, or yellow.

Incandescent Rope Light	**16995K11**	$69.23
LED Rope Light	**16995K12**	128.00

About Batteries

When choosing a battery, you can compare the ***mA-hours*** among similar sizes. The higher the rating, the longer the battery should last.

If you know the milliamp draw of your device, the mA-hour rating will give you an estimate of battery life.

Note: For many batteries, recycling or other proper disposal is required by law. They should not be thrown in the trash. For rechargeable batteries, visit www.call2recycle.org or call 1-877-2-RECYCLE. For all other batteries, contact the manufacturer.

Don't see the battery you need? Just tell us what you're looking for and we'll get it for you.

Disposable and Rechargeable Batteries

Disposable— The choice for economy and convenience.

Rechargeable— *Nickel cadmium (NiCad)* can be recharged up to 500 times. For maximum life, completely drain these batteries before recharging.

Nickel metal hydride (NiMH) can be recharged up to 200 times. Recharging these batteries without completely draining them does not affect storage capacity.

Long shelf-life nickel metal hydride (NiMH) and *long shelf-life alkaline* are ready to use right out of the package—they hold their charge even after months on the shelf. *NiMH* can be recharged up to 300 times. *Alkaline* can be recharged up to 100 times.

Battery chargers have a light that indicates charging. They're for use with rechargeable batteries and operate on 120 VAC, 60 Hz.

NiCad/NiMH charger charges batteries in 4-10 hours. It has a 6-ft. long power cord with two-prong plug. Batteries not included. UL listed.

Alkaline charger charges batteries in 12 hours. It has a two-prong plug that fits directly into a wall outlet and includes four AA batteries. Only for use with long shelf-life alkaline batteries above. ETL and C-ETL listed.

Battery tester lets you know when it's time to replace your disposable batteries.

High-Performance Disposable Lithium Batteries

Designed for long life, these batteries resist humidity and extreme temperatures. They have a button tab except for 6951K18, which has a solder tab.

For Steady Low-Drain Current— Use in applications with low, long-term energy requirements, such as sensors and memory backup.

For High-Drain Current— Use in applications with high energy requirements, such as alarms and metering systems.

Disposable Long-Life Air-Alkaline Batteries

When you need long life, choose the battery that last five times longer than standard alkaline and nine times longer than carbon zinc. Activate by removing the tape from the holes in the battery case, allowing oxygen to flow inside. This battery keeps voltage output at a constant level, even during peaks and pulses that can temporarily drain the oxygen. Use in lanterns, barricade lights, and telecommunications devices.

Rechargeable Backup Battery with USB Port

Keep your mobile device powered when its battery runs out. This backup battery connects to your device's USB port and recharges from your computer using the included USB cable. Battery is a 3.7 volt, 1150 mAh lithium ion and has an LED status indicator that illuminates green at full power and red when low or charging.

3935T11 ..... $34.55

Battery Recycling Container

Dispose of your dead batteries without harming the environment. These plastic buckets hold up to 55 lbs. of dry cell batteries including alkaline, nickel, cadmium, nickel metal hydride, iron, zinc carbon, and silver. The price of the container includes pickup and transportation costs, as well as a certificate of recycling once the batteries are received and recycled.

Rechargeable Lead-Acid Starting and Deep-Cycle Batteries

You'll find these batteries most commonly used in automotive and vehicle applications.

Lead Acid— These wet batteries are shipped ready-to-use with the electrolyte installed except 7238K52 and K56, which are supplied with the electrolyte packaged separately. Batteries may need to be filled with distilled water from time to time. Housing is plastic.

Sealed Lead Acid AGM— Absorbed glass mat (AGM) soaks up the electrolyte, making these dry batteries leak resistant and usable in almost any position except upside down. Housing is plastic.

Starting Batteries

Recommended for starting applications only.

CCA (capacity in cold cranking amps) is the discharge load (in amps) a new, fully charged vehicle battery can continuously deliver for 30 seconds at 0° F.

Deep-Cycle and Dual-Purpose Deep-Cycle/Starting Batteries

Deep-cycle batteries can handle many charge/deep discharge cycles. They offer maximum performance for floor machines, lift trucks, personnel carriers, and other demanding applications.

Dual-purpose deep-cycle/starting batteries can be used for both starting and deep-discharge applications.

Terminal style J has two sets of dual terminals that include solid posts and threaded posts to accommodate either style battery connection.

Reserve capacity is how many minutes a new, fully charged deep-cycle battery can be continuously discharged at 25 amps at 80° F.

MCA (marine cranking amps) capacity is the discharge load (in amps) a new, fully charged deep-cycle battery can continuously deliver for 30 seconds at 32° F.

Lightweight Quick-Charging Lithium Batteries

A step up from the sealed lead-acid AGM batteries on page 742, these batteries weigh less than half as much and can be recharged thousands of times. Maintenance free and mountable in any position, they're a good choice for uninterruptible power supplies (UPS) and emergency lights. They charge in about two hours (chargers sold separately). Housing is plastic.

Chargers have a 3-amp output and automatically switch between a fast charge and maintaining the charge level. They have an LED mode indicator, a 4-ft. power cord with two-prong plug, and 4-ft. leads with alligator clips. Operate on 110-240 VAC, 50/60 Hz.

Rechargeable Sealed Lead-Acid Batteries and Chargers

Batteries

Absorbed glass mat (AGM) soaks up the electrolyte, making these dry batteries leak resistant and usable in almost any position except upside down. Rechargeable hundreds of times, you can use them as a backup power source for emergency lights, alarm systems, and uninterruptible power supplies (UPS) for computers, as well as a primary source for portable tools. All have a plastic housing.

Note: Batteries should always be charged or discharged in a ventilated area.

AGM— 7448K83 and *K44* have universal terminals that accept nut and bolt as well as automotive connections (not shown).

Extended-Life AGM— With a life expectancy of up to 10 years, these batteries last twice as long as AGM. Use in applications where regular replacement is difficult or undesirable.

Terminal Styles

(A) 0.250″ quick-disconnect tabs.

(B) 0.187″ quick-disconnect tabs.

(C) Spring terminals.

(D) Polarized quick-disconnect tabs: 0.250″ (positive) 0.187″ (negative).

(E) Polarized quick-disconnect tabs: 0.250″ (positive) 0.187″ (negative).

(F) Nut and bolt connections.

(G) Threaded insert.

(H) Cast lead post with nut and bolt connections.

Rechargeable Sealed Lead-Acid Batteries and Chargers *(Continued from previous page)*

Chargers

Chargers automatically switch between a fast charge and maintaining the charge level. They have an LED mode indicator, two-prong plug, and 3-ft. leads with alligator clips. Operate on 120-240 VAC, 50/60 Hz (except 7448K79 operates on 120 VAC only). To select the right charger, match your battery's voltage and amp-hour rating to the battery charger's output voltage and amp-hour rating. Chargers are not offered for 4-volt batteries as they are typically used in systems with built-in chargers.

Rechargeable Battery Packs

Individual battery cells are connected via solder tabs and wrapped in PVC shrink wrap. Use these packs for power tools, portable appliances, and telecommunications devices.

Nickel Cadmium (NiCad)—For maximum battery life, completely drain these batteries before recharging.

Nickel Metal Hydride (NiMH)—Recharging these batteries without completely draining them does not affect capacity.

Portable Generators

Get power where you need it. These generators have an overhead-valve engine, which is cool running and fuel efficient. They also have a "low oil shutdown" feature to protect the engine. *Rated watts* is the maximum continuous watt output. *Surge watts* is the amount of watts the generator can produce for a short time.

Electric-start generators require a battery (sold separately).

Wheel kits include handles, flat-free wheels, and mounting hardware.

♠ Has one GFCI receptacle. ♦ Both are GFCI receptacles.

Solar Panels

Rigid *Flexible*

Catch some rays for power without an AC or DC outlet. These panels prevent battery discharge during periods of no sunlight. Wire in parallel to increase amp output. Use with wet and AGM dry cell lead-acid batteries.

Rigid panels have everything you need for battery charging, including a built-in controller that prevents overcharging, a 6-ft. output cable with two-pin SAE connector, and 5-ft. leads with alligator clips. Mounting fasteners included.

Flexible panels power 12-volt devices in addition to trickle charging batteries. They're made of vinyl that conforms to curved shapes and rolls for storage. Wire in series to increase voltage output. They have a pin-and-socket connection and 15-ft. leads with 3/8″ and 5/16″ ring terminal connections. Mount using 5/16″ dia. holes; fasteners not included.

Accessories— *12½-ft. extension cord* has a two-pin SAE connector at each end. *18″ adapter cord* has a two-pin SAE connector on one end to attach to the panel and 5/16″ ring terminals on the other to attach to battery posts. *Cigarette lighter adapter cords* allow you to charge a vehicle's battery through the lighter.

Battery-Powered Starters

12 Volt *12/24 Volt*

Jump-start batteries at sites without an AC power source. These portable starters have LED charge status indicators and an outlet to power/charge DC power tools and work lights. Use with wet and AGM dry cell lead-acid batteries. Recharge starters using the 12-ft. DC adapter cord with cigarette lighter plug or by plugging them into a 120 VAC, 60 Hz outlet.

12-volt starter is powered by a 12-volt battery (included) and has a 4-ft. power cord with a two-prong plug.

12/24-volt starter runs on two 12-volt, 22 amp-hour batteries (included). Turn the knob to switch between 12 and 24 volts. It does not include a power cord; use an extension cord with two-prong plug.

Automatic Battery Chargers

Plug into an AC outlet and these chargers automatically charge and maintain vehicle and stationary batteries. All have LED charge status indicators and reverse-polarity protection. Operate on 120 VAC, 60 Hz.

(A) Standard charger and ***waterproof chargers*** have a 6-ft. power cord with three-prong plug, 4-ft. output cable with two-pin SAE connector, and 18″ leads with 5/16″ ring terminal connections. Use with wet and AGM dry cell lead-acid batteries. Standard charger also has 18″ leads with clamps. Waterproof chargers have a sealed housing with 3/16″ dia. mounting holes (fasteners not included) and are UL listed.

(B) Harsh-environment chargers have a sealed housing that resists water and dirt, a 2-ft. power cord with three-prong plug, and 6-ft. leads with 3/8″ ring terminal connections. Mount using 3/8″ dia. holes (fasteners not included). Use with wet cell lead-acid batteries.

Hand-Held Battery Chargers and Charger/Starters

Take these lightweight chargers with you. All operate on 120 VAC, 60 Hz and have a power cord with a three-prong plug. They're for use with wet cell lead-acid batteries except 7206K51, 7558K68, and 7558K69 are for wet cell lead-acid starting batteries only. 1458K1-K4 are also for use with AGM dry cell lead-acid batteries. Styles C-E have LED charge status indicators except 1458K5. Style C is UL listed.

Automatic chargers adjust to the required amp rate and shut off to prevent overcharging. They have reverse-polarity protection except for 1458K5. ***Chargers with dual-polarity connections*** automatically select the correct polarity so you can connect the clamps to your battery without worrying which is negative or positive.

Waterproof automatic chargers have a sealed housing that's waterproof and shockproof. They have auto shut off as well as reverse-polarity, electronic-overload, and thermal protection.

Manual charger has a 24-hour charging timer and can charge multiple voltages.

Wheeled Battery Charger/Starters

Roll these versatile units right to your battery for charging or starting. They have plastic wheels, a three-prong plug, and operate on 120 VAC, 60 Hz except 7322K52, which has a continental European two-prong plug and operates on 230 VAC, 50/60 Hz.

Indoor Chargers— All have a 2¼ hour timer, a hold position for continuous charging, and overload protection. Use with wet and AGM dry cell lead-acid batteries. UL listed for indoor use only. 7173K21 has a voltmeter. *Charger with load tester* simulates real-world operating conditions. It applies 50 amps to a 6-volt battery and 100 amps to a 12-volt battery.

Indoor/Outdoor Chargers— All have a 1½ hour timer, ammeter, a hold position for continuous charging, and reverse-polarity protection. Use with wet cell lead-acid batteries. 7322K48 is CSA certified, K51 is UL listed, and K52 is CE approved.

Indoor/Outdoor Automatic Charger— Set and connect this unit to automatically charge and maintain your battery. It also operates as a stable power supply for extended servicing of forklifts and other 12-volt industrial equipment. Charger has an ammeter, reverse-polarity protection, and auto shut off. Use with wet and AGM dry cell lead-acid batteries. UL listed.

Stationary Industrial Battery Chargers

Designed to charge batteries in lift trucks, pallet jacks, sweepers, and scrubbers, these chargers start immediately after connection and automatically shut off when battery is fully charged. They have lights to indicate charge status, an ammeter, 8-ft. output cable with a 175-amp North American style connector, and 7-ft. power cord with three-prong plug. Operate on 120 VAC, 60 Hz. Use with wet cell lead-acid batteries.

Battery-Testing Hydrometers and Refractometers

Check the condition of battery fluid by testing its state of charge. Use the scale to measure specific gravity.

Hydrometers

Standard

Temperature Compensating

Break Resistant

Standard— Has a plastic barrel with easy-to-read scale.

Temperature Compensating— Built-in thermometer compensates for temperature variations to provide a more accurate reading. Barrel is glass with a glass float.

Break Resistant— Withstands drops from as high as 4 ft. Barrel is plastic with a heavy duty glass float.

	Specific Gravity Range		
Standard	1.10 to 1.30	**4058K81**	$6.71
Temperature Compensating	1.10 to 1.30	**4058K11**	10.66
Break Resistant	1.10 to 1.35	**4058K21**	52.96

Refractometers

Place a few drops of fluid on the tester and view the results through the eyepiece. It also tests freezing point temperatures of propylene and ethylene glycols for anti-freeze protection. Includes a carrying case and dropper.

Antifreeze Scale Range	Specific Gravity Range		
–50° to 0° C	1.15 to 1.30	**7718K1**	$114.08
–60° to +32° F	1.15 to 1.30	**7718K2**	97.90

Multiple-Battery Charger

Automatically charge up to eight 12-volt, 2- to 12-amp batteries independently, then monitor each to ensure it stays fully charged. Eight digital displays indicate the charge status of each battery. Charger is 12″ Ht.×19″ Wd.×12″ Dp. and has eight detachable 6-ft. cords with booster clamps and one 6-ft. power cord with three-prong plug. Operates on 120 VAC, 60 Hz. Use with wet and AGM dry cell lead-acid batteries.

7318K31 ..... $577.02

Includes Eight Cords

Battery Water Filling Equipment

Filler with 6″ Flexible Spout

Filler with Auto Shut Off

Vent Cap

Filler Gun

Battery-Operated Watering Cart

Fillers are made of polyethylene.

Filler gun has a ⅝″ Dia.×9¼″ bent-end nozzle, auto shut off, and built-in regulator that reduces high water pressure to 1.7 gpm. Attach to any ¾″ GHT (garden hose thread) connection and garden hose with a minimum ⅜″ ID, or use with the watering cart (sold separately). Made of ABS plastic.

Also Available: Replacement parts for filler guns. Please ask for 7661K88 and specify the part needed.

Battery-operated watering cart has a 10-gallon polypropylene tank with easy-to-fill opening, a pump with shut-off switch, and a 9-ft. long hose for attaching a filler gun (sold separately). It's 37″ Ht.×17″ Wd.×17″ Dp. and has two wheels. Cart includes a 12-volt rechargeable sealed lead-acid battery and a charger with 6-ft. power cord and two-prong plug. Operates on 120 VAC, 60 Hz.

Vent cap flips open so you can check or fill your battery. It fits all standard bayonet-style (¼ turn) battery vent openings. Cap has a 1″ ID and is made of polypropylene with an EPDM rubber washer for a tight seal.

		Each
6-oz. Filler with 6″ Flexible Spout	**7656K3**	$3.54

Vent Cap (6/Pkg.)	**7045K8**	$11.76

Battery Surge Protector and Charge Monitor

Take the worry out of jumping and recharging your 12-volt battery—this monitor protects it from damaging surges. It has charge status indicator lights and mounts easily to the top of your battery with the attached adhesive backing. Monitor is 1¾″ Ht.×2¼″ Wd.×1″ Dp. and includes two 20″ wire leads with ⅜″ dia. ring terminal connections.

4261T11 ..... $25.68

Battery Discharge Indicators

Install this gauge on your lift trucks and other electric vehicles to show the condition of the battery. The display flashes at 70% discharge and indicates empty at 80% discharge (accuracy is ±1%).

Indicators have a 6-digit hour meter that monitors use throughout the life of equipment. They're 2″ Dia.×2.2″ Dp., fit a 2 1/16″ dia. panel cutout, and include ready-to-mount quick-disconnect terminals with a tab size of 0.250″ Wd.×0.032″ Thick.

For Battery Voltage		
12	**71165K71**	$111.43

36/48	**71165K73**	111.43

Battery Selector Switch

Alternate between two batteries without interrupting your power. Switch has a polycarbonate housing and three ⅜″ dia. tin-plated copper stud terminals with hex nuts. Surface mount using the ¼″ dia. mounting holes or panel mount in a 3⅝″ dia. cutout.

Switch is rated 32 VDC and has a maximum 350-amp continuous rating when used with 4/0 AWG battery cables. It's 3.9″ Ht.×3.9″ Wd.×3.1″ Dp. and for use in marine applications. UL listed.

69685K61 ..... $44.43

Battery Trays and Hold-Downs

Tray

Hold-Down for Raised Cover

Hold-Down for Flush Cover

Trays are made of vinyl-coated steel and have drain slots to prevent fluid accumulation.

Fits Battery BCI Group	Wd.	Dp.

Battery Load Testers

Standard Duty

Heavy Duty

In addition to wet and AGM dry cell lead-acid batteries, you can use these testers with alternators and starters.

Standard Duty—7579K41 applies two fixed loads and is for small engine and conventional batteries. It has small clamps for hard-to-reach areas. 7579K23 and *K25* apply a fixed load and have side terminal adapters. 7579K25 includes a 4-ft. lead to test for defective alternator diodes.

Heavy Duty—7451K11 applies a fixed load. 7240K2 and *K1* apply adjustable loads.

Battery Voltage and Conductance Tester

Measure the voltage of your batteries as well as the current they can supply. Use on 6- and 12-volt sealed lead-acid batteries with 1.2 to 55 amp-hour capacity. Tester measures voltage from 6 to 14 DC and conductance from 20 to 1,200 siemens. It's 7½″ Ht.×3½″ Wd.×2″ Dp. and has an LED display and 12″ insulated leads with clips.

4863T11 ..... $325.28

Battery Lifters/Carriers

Lifting Strap

Spring-Action Carrier

Side-Lift Carrier

Lifting strap is polyethylene and for use with top-post terminals.

Carriers are for use with top- and side-terminal batteries. *Spring-action carrier* has steel jaws that grip the battery; handle provides a nonslip grip. *Side-lift carrier* is steel and has an adjustable handle and two rubber pads.

	For Battery Size		
Lifting Strap	Any with Posts Spaced Less Than 18″ Apart	**7531K21**	$7.12
Spring-Action Carrier	Up to 10″ Wd.	**69985K78**	17.79
Side-Lift Carrier	4½″ to 7″ Wd.	**69985K79**	20.42

Battery Boxes

Polypropylene

Protect batteries from dirt, debris, and water.

Polypropylene boxes include a tie-down, screws, and bracket.

Polyethylene boxes do not include mounting hardware.

Aluminum box includes a stainless steel hold-down, nuts, and bolts.

Battery Disconnect Switches

Stop battery drain and prevent theft and unauthorized use. Switches are made of copper and brass except Styles A and B, which are brass only. For *Styles C-G,* flip the lever to stop the current (lever extends 3″). *Style H* has a key.

(A&B) Install on a negative battery post. Turn the knob to disconnect the battery. *Style B* has a fused bypass to maintain trickle current to accessories such as radios and computers.

(C-E) Install on a negative battery post. *Style E* has a threaded post and a wing nut that also accommodates lugs.

(F) Attaches directly to negative side terminals.

(G) Ideal in space-restricted areas or where a battery box prevents normal mounting to battery posts. Mount switch in a remote location, run a new battery cable to switch, and connect battery cable to post on switch. Mounting hole is ¼″ dia.

(H) A removable key prevents unauthorized use; turn 90° to connect or disconnect the battery. Switch has two keys, a waterproof cover, and 3/16″ dia. mounting holes.

Battery Cables with Fittings

J *For Three Batteries* ***K*** *For Two Batteries*

L *For Three Batteries* ***M*** *Straight Clamp to Lug*

N *Lug to Lug*

Get maximum conductivity from these copper cables that are insulated with oil-resistant PVC. Temperature range is –40° to +221° F. **To Order:** Please specify black (negative) or red (positive).

Styles J-L allow you to wire two or three batteries in parallel for maximum starting power. Connect the positive terminals together and the negative terminals together to get the combined amp-hours of the batteries (voltage remains the same). All have lead connectors. *Style J* has flag clamps with post connection. *Style K* has lugs with post connection. *Style L* has lugs with 3/8″ dia. stud.

Styles M and ***N*** allow you to connect batteries either to electrical systems or to each other. Clamps and lugs are tin-plated copper; lugs have a 3/8″ dia stud.

For battery cable without fittings, see 6948K on page 799.

Battery Charging Cable Connectors

High-amp battery charging is no problem for these connectors.

North American Style Connectors

No need to distinguish between male and female—any two connectors of the same size will fit together. You'll need two to make a connection. Designed for use with industrial battery cable and battery charger cable, connectors are polycarbonate with two copper contacts. The amps listed below are based on the largest wire size shown. UL recognized.

To Order: For battery connectors, please specify wire size and color. For replacement contacts, please specify AWG size.

Connector with Optional Handle

Amps	Available Wire Sizes (AWG)	Available Colors	O'all Size Lg.	Wd.	Ht.	Connectors	Each	Repl. Contacts	Pair

50 and 120	Polycarbonate	**7043K86**	4.59
175 and 350	Vinyl-Coated Steel	**7043K88**	13.73

Optional dust covers protect the connector end when not in use.

Fits Connector Size (amps)	Dust Cover Material		Each
50	Rubber	**7043K15**	$3.91
120	Rubber	**7043K14**	6.25
175	Nylon	**7043K16**	6.88
350	Nylon	**7043K17**	9.38

Euro Style Connectors

Designed for use with European industrial vehicles, these connectors are CE approved and meet DIN 43589. You'll need a female and a male to make a complete connection. All connectors are made of black nylon and have two copper contacts. ***320-amp connectors*** come with a handle.

Optional handles are black nylon and include mounting screws.

Male with Optional Handle

Battery Jumper Cables and Clamps

Cables are stranded copper, insulated, and have ABS plastic clamps. Temperature range is –40° to +158° F. Clamps only are PVC coated. All clamps are color-coded black (negative) and red (positive).

Jumper Cables with Clamps

Battery Terminal Connectors

A color-coded barrel identifies clamps and lugs by AWG size.

Clamps secure to unthreaded battery terminals by tightening the included nut and bolt except for side-post clamps, which attach to internally threaded battery terminals. **To Order:** Please specify negative or positive, except for clamps with universal polarity.

Lugs are typically used on threaded terminals and require a nut (not included) to secure to the terminal.

Crimp or Solder Style—Made of tin-plated copper.

Connect to cable with a crimping tool or by soldering.
Note: UL listed products are only UL listed if crimped.
Antirotational lugs have serrations on both sides to lock them in place.

Battery Terminal Fasteners and Adapters

Square Head Bolts with Shoulder Nuts

Use with battery terminal clamps. Bolt size is 5/16″-18×1 1/4″. Made of steel with a corrosion-resistant coating. Package quantity is 10.

Black (Negative) ..... 7752K211 **Pkg.** $12.00
Red (Positive) ..... 7752K212 **Pkg.** $12.00

Side Terminal Bolt

Bolt size is 3/8″-16×13/32″. Made of zinc-plated steel. Package quantity is 10.

7752K23 ..... **Pkg.** $11.50

Closed Cap Nuts

Thread size is 3/8″-16. Made of powder-coated stainless steel.

Black (Negative) ..... 7752K241 **Each** $3.05
Red (Positive) ..... 7752K242 **Each** $3.05

Side Terminal Adapter Bolt with Stud

Dual connections let you power two accessories with the same battery. Bolt size is 3/8″-16×1″; stud size is 5/16″-18×1/2″. Made of brass with a zinc-plated steel nut and washer.

7752K31 ..... **Each** $9.70

Stud Terminal to Post Terminal Converters

Made of die cast lead with a 3/8″-16 threaded steel insert. Includes two adapters—one for a negative terminal and one for a positive terminal.

7752K41 ..... **Pair** $5.83

Side Terminal to Post Terminal Converters

Made of die cast lead with a steel stud. Includes two adapters—one for a negative terminal and one for a positive terminal.

7752K42 ..... **Pair** $6.58

Mil. Spec. Terminal Fasteners

Clamp is die cast lead and includes zinc-plated steel nuts and bolts. Meet MIL-A-52425-1/A-52425-2.

Black (Negative) ..... 7738K2 **Each** $4.87
Red (Positive) ..... 7738K1 **Each** $4.87

Marine Terminal Clamps

Made of lead, these clamps fit both negative and positive terminals.

With 5/16″ Stud ..... 69645K59 **Each** $3.16
With 3/8″ Stud ..... 69645K58 **Each** $2.60

Terminal- and Lug-Crimping Tools

Hammer Style

Compact and economical, this tool crimps 8 to 4/0 AWG battery terminal clamps and lugs. Raise the pin to place connector and cable in slot, then hammer the top of the pin to crimp. Tool is 3 1/2″ Ht.×2 1/4″ Wd.×2 1/4″ Dp. and has a malleable iron body and hardened steel pin.

7061K12 ..... $32.58

Lever Style

Adjustable rotating dies provide more consistent crimps than hammer style. Dies are color-coded to match battery cable and connector. Made of heat-treated carbon steel with vinyl grips.

With Ratchet—Tool won't open until fully crimped.

O'all Lg.	Connector Range	*Without Ratchet*		*With Ratchet*	
15″	8 AWG to 1/0 AWG	7061K25	$163.80	—	—

Battery Terminal Corrosion Preventatives

Extend battery life, reduce maintenance costs, and protect exposed parts from moisture, dirt, and other contaminants.

Felt Washers—Impregnated with a corrosion preventative to stop corrosion caused by battery acid fumes leaking at the post or bolt. Washers fit top- and side-mount terminals and are 1 3/4″ OD×11/16″ ID×1/8″ Thick.

Trigger Spray Cleaner—Neutralizes acid and dissolves and removes corrosion. Use on batteries prior to applying washers and coating.

Cleaner and Acid Detector—You'll know acid is present when this yellow foam turns pink. It neutralizes and cleans it away.

Coatings—Form a protective barrier that makes surfaces impregnable to corrosion-causing acid fumes.

		Pkg.

Battery Terminal Cleaners and Tools

Brush

Cleaner

Spreader

Bolt Pliers

Clamp Puller

Brush—Bristles made of high-tensile steel and brass clean standard battery top posts and terminals. Includes a cover.

7455K5 ..... $5.79

Cleaner—The stainless steel brush cleans side terminals; knurled wire cleans battery contacts.

7455K8 ..... $9.77

Spreader—Spreads clamp and cleans the terminal all at once. Made of forged steel.

7455K4 ..... $14.54

Bolt Pliers—Loosen square, hex, and round nuts on terminal clamps. They have a tapered nose for tight spaces and are made of forged steel with vinyl-covered handles.

7455K2 ..... $14.34

Clamp Puller—Removes corroded terminals. It's made of steel and has a 1 1/2″ jaw spread and 1 3/4″ jaw depth.

7455K3 ..... $7.58

For information about wire size (AWG), see page 758.

Terminal Blocks

Connect all the wires in your panel or enclosure in one convenient place. Also known as barrier terminal strips, these blocks have screw terminals—just loosen a screw and wrap a stripped wire end around it (or use a spade terminal) and tighten the screw. All have four mounting holes. Color is black. UL recognized and CSA certified.

All ***terminal blocks*** are phenolic and have a maximum temperature of 302° F, except 300 VAC/VDC terminal blocks with 0.38″ and 0.44″ centers, which are thermoplastic and have a maximum temperature of 230° F, and 600 VAC/VDC terminal blocks with 0.44″ centers, which are thermoplastic and have a maximum temperature of 257° F. ***600 VAC/VDC*** blocks are also CE approved.

Accessories—*Covers* for 300 VAC/VDC blocks with 0.38″ and 0.44″ centers protect the top of the strip and prevent accidental contact. They're made from black fiberboard and include mounting hardware. *Marker strips* extend from underneath the blocks. They are blank for custom identification. *Jumpers* let you connect side-by-side terminals. *Quick disconnects* convert screw terminal connections into quick-disconnect connections. Choose from straight, 45°, and 90° styles. Tab size is 0.187″ wide×0.02″ thick for terminal blocks with 0.38″ centers; for blocks with 0.44″ and 0.56″ centers, tab size is 0.25″ wide×0.032″ thick.

Also Available: Multicircuit Jumpers. Please ask for 7527K991 and specify for 300 VAC terminal blocks with 0.38″ center-to-center or 600 VAC terminal blocks with 0.44″ center-to-center, as well as the number of circuits.

For information about wire size (AWG), see page 758.

Space Saver Terminal Blocks

Also known as barrier terminal strips, these narrow blocks have a single row of terminals. All are black phenolic with two mounting holes (screws not included). Maximum temperature is 302° F. UL recognized, CSA certified, and CE approved. Blocks with ***0.38″ center-to-center*** are 0.56″ Wd. × 0.41″ Ht. Blocks with ***0.56″ center-to-center*** are 0.75″ Wd. × 0.72″ Ht.

Note: The amp ratings in the table apply only when the included insulation strip is attached to the bottom of the block.

Two Circuit

Touch-Safe Terminal Blocks

Recessed screws and terminals on these blocks prevent accidental contact with a live circuit without the need for additional covers (also known as Eurostyle). To make a connection, insert stripped wire into a terminal opening and tighten the screw. The blocks have a mounting hole between every circuit (screws not included) and can be cut into smaller sections without altering electrical properties.

Made of white nylon. Max. continuous temp. is 221° F. All are UL recognized and CSA certified.

Quick-n-Secure Connect Terminal Blocks

Just strip your wire and push it into the spring clamp for a secure connection that withstands vibration and temperature changes better than screw connections. There are four terminals for every circuit and a 0.13″ dia. mounting hole between each circuit (screws not included). You can also mount them to a DIN rail using adapters (sold separately). Size is 1.38″ Wd. × 0.84″ Ht. with 0.47″ centers. Made of nylon. Temperature range is –31° to +221° F. UL recognized and CSA certified.

To Order: Please specify color: black or white.

Channel-Mount Terminal Block Kits

Customize a terminal block for as many circuits as you need. Kits include 100 single-circuit blocks, 50 end stops, and channels. Blocks and channels can be cut to desired length with a pair of clippers, such as the ***cutting tool*** (sold separately below).

The channels have mounting holes (screws not included). Blocks and end stops are nylon; channels are Noryl plastic. Channels for 7989K48 are flanged to accommodate marker identification. Max. temp. is 221° F. UL recognized; CSA certified.

High-Amp Terminal Blocks

Enjoy all the benefits of a terminal block, even in high-amp applications. To make a connection, insert stripped wire into a terminal opening and tighten screw. All are black phenolic. Maximum temperature is 302° F. UL recognized; CSA certified. Blocks with 0.44″ centers are CE approved for 18-8 AWG wire and have two mounting holes (screws not included); blocks with 0.63″ centers are CE approved for 18-6 AWG wire and have a mounting hole between each circuit (screws not included).

Two Circuit

Six Circuit

For information about wire size (AWG), see page 758.

High-Temperature Terminal Blocks

300 VAC

600 VAC/VDC

Where other terminal blocks warp and melt, these ceramic blocks aren't even getting warmed up. Color is off-white.

300 VAC terminal blocks withstand temperatures up to 1112°F. Blocks have recessed screws to prevent accidental contact with a live circuit. To make a connection, insert your stripped wire into the terminal opening and tighten the screw. They have two mounting holes (mounting screws not included). UL and C-UL recognized.

600 VAC/VDC terminal blocks are ready for temperatures up to 842°F. To make a connection, just loosen a screw and wrap the end of your wire around it. You can also use a high-temperature ring terminal (screw terminal size is #8). They have holes for mounting (mounting screws included).

Through-Panel Terminal Blocks

Screw Terminals

Stud Terminals

If your panel is a gateway for high-amp connections, make those connections simply and safely with these blocks. They mount in a panel cutout and have connections on both sides.

Screw Terminals— Made of black high-impact and chemical-resistant polyester with a maximum temperature of 194°F. All include a cover and two 0.21″ dia. mounting holes (screws not included). Blocks have M5 (5 mm) screw terminals and are UL and C-UL recognized.

Stud Terminals— Made of black thermoplastic with a maximum temperature of 257°F. There are four 0.23″ dia. mounting holes (screws not included). Include nuts for connecting. UL recognized, CSA certified, and CE approved.

Printed Circuit Board (PCB)-Mount Terminal Blocks

Make wire connections to printed circuit boards. All are rated at 300 VAC/VDC and withstand temperatures up to 230°F. They're UL recognized, CSA certified, and meet UL 94V0 for flammability. Color is black.

One-Piece Screw-Terminal Style

Four-Circuit Terminal Block

Straight Quick Disconnect

45° Quick Disconnect

90° Quick Disconnect

Jumper

Terminal Blocks— Solder the 0.19″ long tin-plated brass pins directly to your circuit board. Body is thermoplastic with barriers to separate the screw terminals. To make a connection, loosen the #6-32 screws and wrap stripped wire around them, or use spade terminals. Optional quick-disconnect terminals are sold separately below.

No. of Circuits	Amps Per Circuit	For Wire Size, AWG	O'all Size, Lg.×Wd.×Ht.	Center-to-Center		Each

Two-Piece Screw-Clamp Pluggable Style

Plug

90° Plug

Receptacle

90° Receptacle

Ideal for field repair, these nylon terminal blocks are two pieces (each sold separately below). The receptacle contains the tin-plated brass pins that you solder to your PC board, and the removable plug mates with the top of the receptacle, permitting wire entry either parallel or perpendicular to the PC board. Rated 15 amps per circuit. To make a connection, insert wire into the plug opening and tighten the screw.

To Order: Please specify center-to-center space between pins: 5 mm (0.197″) or 5.08 mm (0.200″).

Plugs are 0.5″ Wd.×1.02″ Ht. and accept 26-12 AWG wire. ***90° plugs*** are 0.72″ Wd.×0.59″ Ht. and accept 26-12 AWG wire. ***Receptacles*** have 0.15″ long pins. They are 0.33″ Wd.×0.47″ Ht. ***90° receptacles*** have 0.15″ long pins. They are 0.47″ Wd.×0.33″ Ht.

For information about wire size (AWG), see page 758.

Quick-n-Secure Modular DIN Rail-Mount Terminal Blocks

With spring-clamp connections, these blocks install in a snap and won't loosen in high-vibration applications. They're also unaffected by changes in temperature. To install, insert a screwdriver into the opening slot and slide your stripped wire into the spring-clamp slot. With 4.2 mm blocks, you can push solid or stranded wire with ferrules into the spring-clamp slot without using a tool. Temp. range is –31° to +221° F. UL recognized for AC voltage applications; CSA certified.

One-Circuit Two-Terminal Standard Block (Shown with Wires Inserted)

Terminal Blocks

Select blocks with the same number of terminals as the number of wires you want to connect, then mount the blocks side-by-side on a DIN 3 rail. They are made of nylon. For compatible fuse blocks, see page 953. Two- and three-circuit terminal blocks include a marker holder. *Disconnect blocks* have a movable tab so you can open the circuit for testing. *Ground blocks* have an isolated ground (run wire from block to the grounding stud on your panel).

End Sections— Cover the open side of a block to prevent accidental contact with a live circuit. Color is orange. An end section is included with the 16 mm and 25 mm single-circuit standard blocks.

End Stops— Mount at the end of an assembly, providing support to terminal blocks and preventing movement. Color is gray.

♦ 15% discount for quantities of 25 or more.

DIN 3 Rails

Length is 39″ (1 meter). ***Zinc-plated steel*** rails have punched holes. For more information and DIN rail accessories, see page 915.

	Width	Height		Each
Zinc-Plated Steel	35 mm (1.38″)	7.5 mm (0.30″)	8961K15	$4.96
Stainless Steel	35 mm (1.38″)	7.5 mm (0.30″)	8961K42	24.09

Modular DIN Rail-Mount Terminal Blocks

One-Circuit Screw-Clamp Block (Shown with Wires Inserted)

Jumpers

Add as many circuits as you need, then snap onto a DIN rail. They can be removed without disrupting adjacent units. Made of thermoplastic. Temperature range is –40° to +221°F. UL recognized and CE approved, unless noted. All except jumpers are IP20 touchproof.

Terminal Blocks

Place as many blocks as needed side-by-side to make an assembly. **To Order:** Please specify color from those listed (where necessary).

Screw-clamp disconnect blocks have a movable tab so you can open the circuit for testing. ***Screw-clamp fuse blocks*** allow inline fuse wiring to protect components and wires from short-circuit damage. *8 mm blocks* accept 5 mm×20 mm and 5 mm×25 mm fuses; *13 mm blocks* accept 1/4″×1 1/4″ (3AG) fuses; *22 mm blocks* accept 13/32″×1 1/2″ (midget) fuses (see page 920). ***Screw-clamp fuse blocks with blown-fuse indicator*** let you know when the fuse is blown. ***Spring block*** has a screwless top-entry connection for easy access and wiring, plus it withstands vibration. ***Spring-ground block*** for DIN 3 rail has electrical grounding to mounting rail; spring-ground block for DIN 2 rail has an isolated ground (run wire from block to grounding stud on panel).

Terminal Block Accessories

End sections cover the open side of a block to prevent accidental contact with a live circuit. Color is gray, except 7641K84 and K961, which are yellow, and K49, which is black. Where end sections aren't offered, the terminal block's end is closed, so an end section isn't required. ***End stops*** mount at the end of an assembly to resist movement. Color is gray. 7641K35 is for DIN 3 rails only. ***Jumpers*** connect several terminal blocks with the same width. They have 10 circuits and can be cut to size, unless noted. Not for use with ground blocks.

Modular Terminal Blocks

Customize your terminal block assembly with as many circuits as you need, then mount on a channel or directly to a surface. These single-circuit blocks, also known as NEMA-style blocks, are great for power distribution, control wiring, and instrumentation cabinets. To make a connection, insert wire and tighten the screw. Terminal blocks are UL recognized and CSA certified.

Nylon block has a flammability rating of UL 94V2 and a maximum temperature of 257° F. Color is translucent white. ***Polyester*** block has a markable surface, a flammability rating of UL 94V0, and a maximum temperature of 302° F. Color is gray. ***Phenolic*** block has a flammability rating of UL 94V1 and has a maximum temperature of 302° F. Color is black.

Choose from ***surface mount***, which has a flat base for mounting directly to a panel (requires #8 screws, except 7606K21, which requires #4 screws) or ***channel mount***, which has a dovetail base for mounting to a channel (sold separately).

Channels come in 3-ft. lengths. 7606K33 is zinc-plated steel and has a centered row of mounting holes for #4 or #6 screws (screws not included). 7606K71 is aluminum and has a centered row of mounting holes for #10 screws (screws not included). Two ***channel clamps*** (sold separately) are required to secure terminal blocks to a channel (one on each end of a group of blocks).

End sections cover the open side of the block, preventing contact with exposed circuitry. One end section is required per group of terminal blocks.

Jumpers join adjacent terminals.

♦ 15% discount for quantities of 25 or more.

Touch-Safe DIN Rail-Mount Terminal Blocks

Your wires are supposed to make contact with each other, not with your fingers. These blocks have concealed screw terminals to prevent accidental contact with live circuits. And don't worry about dropping screws—they unfasten without ever coming free from the block. All mount on a 35 mm DIN 3 rail and are made of white polyester. Temperature range is –55° to +300° F. UL and C-UL recognized.

Blocks ***for ring terminals*** give the most secure connection. Screw size is 8-32. Blocks ***for stripped wire*** have grooved clamps to prevent your wire from wiggling out of the terminal.

No. of Circuits	Amps Per Circuit @ 600 VAC	For Wire Size, AWG	Center-to-Center	O'all Size, Lg.×Wd.×Ht.	For Ring Terminals Each	For Stripped Wire Each

35 mm DIN 3 Rail (1 m Lg.) ..... 8961K15 Each $4.96

Pole-Mount Outlet Box

Mount this versatile outlet box on a wall, pole, or cart leg to allow greater access to electric power. It has two 5/8″ dia. holes for wall mounting (screws not included) and a clamp that allows the box to attach to a 3/4″ to 1 1/2″ dia. pole or cart leg.

It has six three-prong (NEMA 5-15) outlets and includes a 15-ft. 14 AWG gray Type STJ cord with a three-prong (NEMA 5-15) plug.

The outlet box is rated 12 amps @ 125 VAC. Housing is blue polycarbonate/ABS plastic and includes a power indicating light. Size is 5 9/16″ Ht.×5 1/4″ Wd.×3 1/4″ Dp. Temperature range is –4° to +122° F. UL listed.

8331K1 ..... Each $119.09

High-Amp Distribution Blocks

Screw-Clamp Style One Circuit

Screw-Clamp Style Three Circuits

Stud Style Two Circuits

Offering very high amp ratings, these distribution blocks take a large wire from your power source (line) and connect it to one or more wires going to your electrical devices (loads). All have a black phenolic base and two mounting holes per circuit, unless noted (screws not included). Maximum temperature is 302° F, except for 115-amp blocks which have a thermoplastic base and a maximum temperature of 257° F. Amp rating is based on NEC table 310-16 using 75° C copper wire. UL recognized, CSA certified, and CE approved.

Screw-Clamp Style— To make a connection, insert a stripped wire into a terminal opening and tighten the screw.

Stud Style— Place wires with ring- or spade-terminals around the stud to make a connection.

Optional Cover— Protects the top of the block and prevents accidental contact with live circuits. Made of clear polycarbonate. Includes two screws for fastening to the block.

To Order: Please specify the part number of the distribution block.

DIN Rail-Mount High-Amp Distribution Blocks

Two Circuits

Similar to the High-Amp Distribution Blocks on this page, except these mount to a DIN 3 rail for quick installation and removal. Distribution blocks take a large wire from your power source (line) and connect it to one or more wires going to your electrical devices (loads). Blocks have screw-clamp style connections; to make a connection, insert a stripped wire into a terminal opening and tighten the screw. Made of polycarbonate with a maximum temperature of 257° F, unless noted. Color is black. Amp rating is @ 600 VAC/VDC and is based on NEC table 310-16 using 75° C copper wire. UL recognized, CSA certified, and CE approved. ***DIN 3 rail*** is zinc-plated steel with punched holes.

35 mm DIN 3 Rail (1 m Lg.)													8961K15	Each $4.96

▲ Made of nylon; maximum temperature is 221° F.

Circular High-Amp Distribution Posts

Connect high-amp wire to the center stud for distribution to eight circuits via screw terminals. Base is glass-reinforced nylon and maximum temperature is 248° F. Posts have two mounting holes (screws not included). Color is black. Includes a red PVC cover. CE approved.

Harsh-Environment High-Amp Distribution Bars

One Circuit with Stud Terminals

One Circuit with Stud and Screw Terminals

Two Circuit with Screw Terminals

Two Circuit with Stud and Screw Terminals

Optional Cover

Also known as bus bars, these serve as connection points between wires with ring or spade terminals. They have a black thermoplastic base, tin-plated copper bus bar, and stainless steel screws and studs to protect against corrosion in harsh environments. The underside is sealed, so the bars can be safely mounted to conductive surfaces. Mounting screws not included. CE approved to 250 VAC.

Optional covers screw onto the mounting surface to protect the top of the bar and prevent accidental contact with live circuits. They're made of black ABS plastic and have two 0.16″ dia. mounting holes, except 9290T23 which has six mounting holes (screws not included).

♣ Color is clear. ♥ Per circuit. ✓ Includes a clear polycarbonate snap-on cover.

For information about wire size (AWG), see page 758.

Ring Terminals

Simply crimp onto your wire and mount on top of a threaded post or stud for a reliable connection. They are tin-plated copper, except star terminals, which are tin-plated steel. UL listed and CSA certified, unless noted.

To Order: For standard terminals, please specify package quantity where necessary.

Noninsulated terminals are rated to 300° F. Voltage ratings do not apply.

Insulated terminals offer electrical isolation. Rated to 600 volts and 221° F, unless noted. *Nylon insulated* have an internal brass sleeve that provides an extra-tight crimp for high-vibration applications.

Heavy duty terminals are 25% thicker overall than standard terminals.

Star terminals have a serrated edge that digs into coatings as you tighten to provide a good connection.

Multistud terminals have an elongated stud hole that holds on to different stud sizes.

About Wire Size (AWG)

AWG stands for American Wire Gauge, a designation of the wire diameter of the electrical conductor. Wire gauges that are larger than 4/0 are given the designation MCM (or KCMIL).

Wire Size (AWG)	Wire Dia. Inches	Wire Dia. mm	Wire Size (AWG)	Wire Dia. Inches	Wire Dia. mm	Wire Size (AWG)	Wire Dia. Inches	Wire Dia. mm	Wire Size (AWG)	Wire Dia. Inches	Wire Dia. mm	Wire Size (AWG)	Wire Dia. Inches	Wire Dia. mm

High-Temperature Ring Terminals

Noninsulated

Insulated

Designed to withstand high temperatures, these crimp-on terminals are your best choice for extremely hot environments.

Noninsulated—Voltage ratings do not apply. **To Order:** Please specify package quantity from those available. *Terminals rated to 900° F* are nickel-plated steel. UL recognized. *Terminals rated to 1200° F* are nickel. UL listed.

Insulated—PVDF insulation provides electrical isolation and prevents wire flexing at the crimp point. All are made of tin-plated copper and are rated to 600 volts. UL listed.

Heat-Shrink Insulated Ring Terminals

Standard

Sure-Connect

Multistud

A rugged, all-weather connection seals out water, salt, and harsh contaminants. Crimp terminal onto wire and apply heat—the heat-shrink tubing forms an abrasion- and strain-resistant seal. Terminals are tin-plated copper.

Standard terminals have a nylon-like polymer heat shrink tubing with a minimum shrink temperature of 194° F. Rated to 600 volts and 221° F. UL listed and CSA certified.

Sure-connect terminals provide maximum durability. They have an enclosed solder that melts when heat is applied to the polyolefin heat shrink tubing, providing the most reliable electrical connection. Minimum shrink temperature is 275° F. Rated to 600 volts and 221° F.

Multistud terminals have polyolefin heat shrink tubing with a minimum shrink temperature of 302° F. Rated to 600 volts and 257° F.

For information about wire size (AWG), see page 758.

Flag Ring Terminals

"Flag on a flagpole" design lets you connect your wire at a right angle. Great for tight spaces. These crimp-on terminals are made of tin-plated copper and are rated to 300° F. Voltage ratings don't apply to these noninsulated terminals. UL listed.

Metric Ring Terminals

Don't let a fraction of an inch come between your metric wire and metric stud. Now your crimp can be perfect and the terminal will fit snugly. These terminals are made of tin-plated copper.

Noninsulated— These are rated for a maximum temperature of 302° F. Voltage ratings do not apply.

Insulated— Provide electrical isolation and prevent the wire from flexing at the crimp point. All are rated to 600 volts and a maximum temperature of 221° F. *Nylon insulated* terminals have an internal brass sleeve for an extra tight crimp, making them good for high-vibration applications.

Ring Terminal Assortments

We put our most popular crimp-on ring terminal sizes in one plastic compartmented box, ready for the next maintenance call. Terminals are tin-plated copper.

Noninsulated— These are rated to 300° F. Voltage ratings do not apply.

Insulated— Color coded by wire size: 22-18 AWG are red, 16-14 AWG are blue, and 12-10 AWG are yellow. *Vinyl insulated* terminals are rated to 600 volts and 221° F. *Nylon insulated* terminals have an internal tin-plated brass sleeve to provide an extra tight crimp for high-vibration applications. Rated to 600 volts and 221° F.

All assortments contain 12 different terminals: 22-18 and 16-14 AWG sizes for #6, #8, #10, and ¼" studs, and 12-10 AWG size for #8, #10, ¼", and ⅜" studs. The ***180-piece assortment*** has 15 of each terminal and the ***300-piece assortment*** has 25 of each terminal.

180-Piece Noninsulated

	180 Pieces	Each	300 Pieces	Each
Noninsulated	8853T11	$49.39	8853T12	$65.67
Vinyl Insulated	8853T18	51.10	8853T19	68.76
Nylon Insulated	8853T25	64.04	8853T26	92.07

Hook Terminals

A cross between ring and spade terminals, hook terminals install without removing the mounting screw and they resist being pulled off. Terminals are tin-plated copper. UL listed and CSA certified.

Noninsulated— Rated to 300° F. Voltage ratings don't apply to these terminals.

Insulated— Terminals provide electrical isolation. Rated to 600 volts and 221° F. *Nylon insulated* terminals have an internal tin-plated brass sleeve to provide a tighter crimp compared to vinyl insulated terminals. Good for high-vibration applications.

Heat-Shrink Insulated Spade Terminals

For an all-weather connection that seals out harsh contaminants, just crimp these terminals onto wire and apply heat. Tubing shrinks to form an abrasion- and strain-resistant seal. Made of tin-plated copper. Rated to 600 volts and 221° F.

Standard— All except 71425K56 are adhesive-lined nylon-like polymer, have a minimum shrink temperature of 194° F and are UL listed. 71425K56 is adhesive-lined polyolefin, has a minimum shrink temperature of 275° F and is not UL listed.

Locking Sure-Connect— Spring-action forks lock in place around stud, holding the terminal in place before tightening. For maximum durability and the best electrical connection, an enclosed solder melts when heat is applied to the polyolefin tubing. Minimum shrink temperature is 275° F.

♣ For 20-18 AWG.

For information about wire size (AWG), see page 758.

Spade Terminals

Ever drop a mounting screw? With spade terminals, you don't have to completely remove the mounting screw to install; just loosen it. Terminals are tin-plated copper and simply crimp onto wire. UL listed and CSA certified.

To Order: Please specify package quantity from those available.

Standard terminals are used on studs. ***Block*** terminals have squared shoulders and straight sides to fit tightly into standard terminal blocks. ***Flanged*** terminals have turned-up edges to keep the terminal secure even if the screw loosens—ideal for vertical applications. ***Locking*** terminals have spring-action forks that lock around the stud, holding the terminal in place prior to tightening.

Noninsulated terminals have no voltage ratings. Rated to 300° F, except *locking terminals* are rated to 347° F. ***Insulated*** terminals provide electrical isolation. They're color-coded by wire size: 22-18 AWG are red, 16-14 AWG are blue, and 16-12 and 12-10 AWG are yellow. Rated to 600 volts and 220° F. *Nylon insulated* have an internal tin-plated brass sleeve that provides an extra-tight crimp compared to vinyl. Great for high-vibration applications.

Flag Spade Terminals

Connect wires at a right angle in those awkward tight spots. Terminals are noninsulated tin-plated copper and rated to 300° F. Voltage ratings don't apply to these terminals. UL listed and CSA certified.

For Wire Size (AWG)	For Stud Size	Spade Wd.	Pkg. Qty.		Per Pkg.
16-14	#8 (0.164″)	0.38″	100	72815K52	$11.73

High-Temperature Spade Terminals

A 900° F temperature rating makes these noninsulated crimp-on terminals perfect for high-heat applications. Spade style lets you install without removing the screw. All are nickel-plated steel. Voltage ratings don't apply.

Block terminals have square shoulders and straight sides that fit tightly in terminal blocks.

For information about wire size (AWG), see page 758.

Pin Terminals

Ever try pushing a stranded wire into a small terminal block opening? Crimp one of these onto the wire and you'll have a solid pin instead. Pin is 0.08″ Dia. × 0.37″ Lg., unless noted. Made of tin-plated copper. UL listed and CSA certified. **To Order:** Please specify package quantity.

Noninsulated have no voltage ratings. Rated to 300° F. ***Vinyl insulated*** are rated to 600 volts and 221° F. ***Nylon insulated*** have an internal brass sleeve to provide an extra-tight crimp for high-vibration applications. Rated to 600 volts and 221° F.

Wire Ferrules and Ferrule Crimpers

Ferrules add strength and stability to stranded wire to prevent damage and allow fast insertion into terminal blocks. Unlike pin terminals, ferrules have a hollow pin that is crimped around the wire strands to make a better electrical connection. All are tin-plated copper and rated to 221° F. CE approved.

To Order: Please specify package quantity where necessary.

Noninsulated wire ferrules do not have voltage ratings. ***Insulated*** wire ferrules have color-coded polypropylene insulation, making it easy to identify wire size. Rated to 600 volts. *Two-wire insulated wire ferrules* let you combine two same-size wires into one terminal block.

Insulated Wire Ferrule Assortments

All ferrules have color-coded polypropylene insulation and are CE approved. Made of tin-plated copper. Rated to 600 volts and 221° F. Furnished in a plastic case.

Single-wire 100-piece assortment includes 20 each of 10 AWG (yellow) and 8 AWG (red); 50 each of 12 AWG (gray); and 10 each of 6 AWG (blue).

Single-wire 400-piece assortment includes 50 each of 22 AWG (white) and 14 AWG (blue); and 100 each of 20 AWG (gray), 18 AWG (red), and 16 AWG (black).

Two-wire 225-piece assortment includes 50 each of 22 AWG (white), 20 AWG (gray), 18 AWG (red), and 16 AWG (black); and 25 each of 14 AWG (blue).

Wire Ferrule Crimpers

Ratchet-style crimpers are side loading and have individual square crimping slots for each wire size.

For 22-12 AWG ..... **5722K12** **Each** $63.89
For 10-6 AWG ..... **5722K14** **Each** $63.89

Self-adjusting ratchet-style crimper is front loading for ease of use in tight areas and automatically self-adjusts to the proper square crimp size.

For 28-7 AWG ..... **5722K16** **Each** $254.34

For information about wire size (AWG), see page 758.

About Quick-Disconnect Terminals

Quick-disconnect terminals give fast, secure connections for your wiring and allow for quick change-outs. Easy snap-in/snap-out design makes these terrific for any application that requires frequent repair or replacement. When an application calls for a 1/4″ quick-disconnect, choose a 0.250″ tab width.

Quick-Disconnect Terminals

Just crimp onto your wires and you're ready to go. Terminals snap in and out for fast, secure connections.

Female terminals are tin-plated brass, except *fully insulated* models, which are tin-plated copper. ***Male*** terminals are zinc-plated copper, except *fully insulated* models, which are tin-plated copper. ***Standard barrel*** terminals require one crimp. ***Double-crimp barrel*** terminals require two crimps and provide an extra-tight grip for high-vibration applications.

Noninsulated

Standard Barrel Female

Standard Barrel Male

Double-Crimp Barrel Female

Double-Crimp Barrel Male

- Voltage ratings don't apply to these noninsulated terminals.
- Rated to 300° F.
- UL listed and CSA certified, unless noted.

Heat-Shrink Insulated Quick-Disconnect Terminals

Just crimp and apply heat for a moisture- and corrosion-resistant connection. Tab size is 0.250″ Wd. × 0.032″ Thick.

Insulated barrel provide electrical isolation for two side-by-side terminals. ***Fully insulated*** have insulation that completely covers the terminal and barrel, providing full electrical isolation.

Standard terminals have a min. shrink temp. of 194° F. Insulation is a nylon-like polymer. Rated to 600 volts and 221° F. Made of tin-plated copper and UL listed, unless noted.

Sure-connect terminals have an enclosed solder that melts when heat is applied for maximum durability and the best electrical connection. Heat shrink is polyolefin with a minimum shrink temperature of 275° F. All are rated to 600 volts and 221° F. Not UL listed. *Female* terminals are tin-plated brass; *male* terminals are tin-plated copper.

Standard Insulated-Barrel Female

Standard Fully Insulated Male

Sure-Connect Insulated-Barrel Female

Quick-Disconnect Terminal Assortments

Our most popular quick-disconnect styles and sizes in a convenient compartmented plastic box. Female terminals are tin-plated brass and male are zinc-plated copper.

Noninsulated are rated to 300° F. Voltage ratings don't apply. ***Insulated*** are rated to 600 volts and 221° F. They're color-coded by wire size: 22-18 AWG are red, 16-14 AWG are blue, 12-10 AWG are yellow. *Insulated barrel* have vinyl insulation. *Fully insulated* have nylon insulation that fully covers the terminal so there is no exposed metal.

150-piece assortments have 25 male/female pairs in 22-18, 16-14, and 12-10 AWG sizes. ***280-piece*** assortments have 50 male/female pairs in 22-18 and 16-14 AWG sizes and 40 male/female pairs in 12-10 AWG size.

Flag

Flag Quick-Disconnect Terminals

"Flag on a flagpole" design places your wire at a 90° angle, making them great for tight spaces. These female terminals connect with any male quick-disconnect tab of the same wire and tab size. Crimp to install. Terminals are tin-plated brass. UL listed and CSA certified, unless noted.

Noninsulated are rated to 300° F. Voltage ratings don't apply.

Fully insulated have nylon insulation that completely covers the terminal, leaving no exposed metal when connected. Rated to 600 volts and 221° F.

Standard require one crimp. ***Expanded*** have wider barrels for faster wire insertion. ***Double-crimp*** require two crimps and are good for high-vibration applications.

16-14	0.250″	0.032″	Blue	5	8414T12	2.20

Piggyback Quick-Disconnect Terminals

Insulated Double-Crimp Barrel

Fully Insulated Expanded Barrel

Easily connect a second wire to the same terminal. Piggyback quick-disconnects are female crimp-on terminals with a male tab "piggybacked" onto them. Made of tin-plated brass. Tab size is 0.250″ Wd. x 0.032″ Thick. All have vinyl insulation except double-crimp barrels, which have nylon insulation. Rated to 221° F. UL listed, unless noted.

Insulated barrel provides electrical isolation when two terminals are used next to each other. ***Fully insulated*** have insulation that covers the entire female terminal and barrel.

Standard and ***expanded barrel*** terminals are rated to 600 volts. *Expanded barrel* have a wider barrel that accommodates two wires in one connector. ***Double-crimp barrel*** allows two crimps for a secure connection. Great for high-vibration applications. Rated to 300 volts.

PC Board Quick-Disconnect Terminals

Without Tab Support

With Tab Support

Add quick-disconnect convenience to a printed circuit board with these male terminals. They work with female quick-disconnect terminals that accept the same tab size. Terminals have solder tails for attachment to your circuit board. Made of tin-plated brass. They are noninsulated, so no voltage ratings apply. Rated to 300° F. UL recognized.

Terminals with tab support provide additional support to prevent side-to-side movement during connection.

Stud to Quick-Disconnect Adapters

Round Tongue

Square Tongue

Turn your screw-style terminals into efficient quick-disconnect style connections. Adapters are male, tin-plated copper, and noninsulated. Rated to 347° F. Voltage ratings don't apply to these noninsulated adapters.

Square tongue adapters fit into terminal block slots to reduce loosening due to vibration.

Quick-Disconnect Terminal Splitters and Adapter

Single Male to Double Male Splitter, Side-by-Side

Single Male to Double Male Splitter, Piggyback

Adapter

Use these crimp-on terminals with any standard 0.250″ wide tab quick-disconnect. Terminals are tin-plated brass.

Single male to double male splitters let you split one male connection into two. They're rated to 300° F and are noninsulated. Voltage ratings don't apply.

Adapter converts a female connector into a male, allowing you to connect two female quick-disconnects together. Insulation is polypropylene. Rated to 300 volts and 221° F.

Snap-Plug Terminals

These crimp-on terminals have a space-saving round tab instead of the flat one found on conventional quick-disconnects. UL recognized and CSA certified.

Noninsulated terminals are rated to 300° F. Voltage ratings don't apply to these terminals. *Female* terminals are tin-plated brass; *male* are tin-plated copper.

Vinyl and ***nylon insulated*** terminals provide electrical isolation. Rated to 600 volts, unless noted. *Female* terminals are tin-plated brass; *male* are tin-plated copper. *Vinyl insulated* are rated to 122° F. *Nylon insulated double crimp* allow for two crimps on the barrel for a more secure connection. Great for high-vibration applications. Rated to 221° F.

Heat-shrink insulated terminals seal out water, salt, and contaminants. Just crimp and apply heat—the nylon-like polymer insulation will shrink to form a seal that provides superior abrasion protection and prevents wire flexing at the crimp point. All are tin-plated copper. Insulation is adhesive lined. Min. shrink temperature is 194° F. Rated to 600 volts and 221° F.

▲ Not voltage rated. ♣ Rated to 300 volts.

For information about wire size (AWG), see page 758.

Butt Splices

Crimp-on butt splices provide a compact and reliable way to connect two wires. Splices are made of tin-plated copper. UL listed and CSA certified, unless noted.

Noninsulated splices are rated to 300° F. Voltage ratings don't apply. ***Insulated*** splices provide electrical isolation. Rated to 600 volts and 220° F, unless noted. *Nylon-insulated* splices are more durable than vinyl. *Nylon-insulated double-crimp* splices have a barrel that allows two crimps to provide an extra-tight grip in high-vibration applications. *Heat-shrink insulated* splices are made of nylon-like polymer and have adhesive-lined insulation that shrinks when heated to form a seal against moisture and corrosion. Minimum shrink temperature is 194° F. *Nylon-insulated moisture-resistant* splices are filled with moisture-resistant grease.

Multiple-Wire Heat-Shrink Butt Splices

Connect a single wire to two wires of the same size with these butt splices. Crimp one wire into the small end of the connector and two into the large end. Use a heat gun to melt the heat shrink and enclosed adhesive for water resistance. Insulation is clear and has color-coded dashes on connector ends to tell you which crimp die to use. An inspection window allows you to check your connection. Splices are tin-plated copper with polyolefin insulation, and should be used with stranded copper wire. Rated to 600 volts and 221° F.

Modular Quick-Disconnect Terminal Blocks

8238T11

For speedy connection and disconnection, choose these terminal blocks. Modular design allows you to add as many poles (circuits) as you need. Blocks and end stop have one 0.16″ mounting hole (screws not included). Each assembly requires one end stop. These single-pole, white thermoplastic blocks are rated for 40 amps @ 600 VAC/VDC. The block with a screw-clamp terminal is for 22-8 AWG wire. Quick disconnects are 0.250″ Wd. × 0.031″ Thick. Max. temperature is 221° F. UL recognized, CSA certified, and CE approved.

With 4 Quick Disconnects	8238T31	2.43
End Stop	8238T7	1.34

High-Temperature Butt Splices

Designed for use with stranded copper wire and temperatures up to 900° F, these crimp-on, noninsulated splices are perfect for ovens, motors, light fixtures, and other high-heat applications. Made of nickel-plated steel. Voltage ratings don't apply to these splices.

3-Way and 4-Way Splices

Vinyl Insulated 3-Way Splice

Connect multiple wires together with these crimp-on tin-plated copper splices. All have insulation, preventing wire flexing at the crimp point. Rated to 600 volts and 221° F. CSA certified, unless noted.

Nylon insulated splices are tougher than vinyl. ***Heat-shrink insulated*** splices are made of nylon-like polymer. An adhesive-lined insulation shrinks when heated to seal against moisture and corrosion. Min. shrink temp. is 194° F. UL listed, unless noted.

Twist-On Butt Splices

No crimping required—just strip and insert two stranded wires and tighten the threaded end caps to lock wires into place. You can also disconnect and reconnect over and over. Good for high-vibration applications. Made of nylon with a tin-plated brass insert. Rated to 600 volts and 248° F.

Standard splices are UL listed. ***Weather-resistant*** have sealed threads and insulation.

Terminal/Butt Splice Assortments

Assortments include a crimping tool. Terminals and connectors are UL listed, unless noted.

Noninsulated terminals are rated to 300° F. Voltage ratings don't apply to these terminals.

Vinyl insulated terminals are rated to 600 volts and 221° F, unless noted.

Heat-shrink insulated terminals have a polyolefin sleeve that shrinks (when heated to 248° F) to form an environmental seal with superior abrasion resistance. Rated to 600 volts and 221° F.

Noninsulated Assortments

240-Piece—20 each of 12 different pieces (AWG wire size in parentheses): Ring terminals (16-10); spade terminals (22-14); male and female quick-disconnect terminals (16-14); and butt splices (22-10). Includes a plastic case. Also CSA certified.

7121K11 ..... **Each** $59.42

900-Piece—45 each of 20 different pieces (AWG wire size in parentheses): Ring terminals (22-10); spade terminals (22-10); male and female quick-disconnect terminals (16-14); and butt splices (22-10). Includes a metal case.

7123K2 ..... **Each** $132.96

Vinyl-Insulated Assortments

120-Piece—10 each of 12 different pieces (AWG wire size in parentheses): Ring terminals (16-10); spade terminals (22-14); male and female quick-disconnect terminals (16-14); and butt splices (22-10). Includes a plastic case. Also CSA certified.

7121K13 ..... **Each** $58.61

490-Piece—25 each of 19 different pieces (AWG wire size in parentheses): Ring terminals (22-10); spade terminals (22-10); male and female quick-disconnect terminals (16-14); butt splices (22-10); crimp-on wire connectors (22-10; 22-14 AWG rated to 300 volts); and 15 insulation piercing wire taps (16-14). Includes a metal case.

7123K1 ..... **Each** $127.84

Heat-Shrink Insulated Assortments

50-Piece Butt Splice—Includes 15 each of AWG wire size 22-18; 25 each of AWG wire size 16-14; and 10 each of AWG wire size 12-10. Crimping tool is ratcheted. Includes a plastic case.

69185K33 ..... **Each** $77.55

80-Piece—35 ring terminals (22-10 AWG), 5 spade terminals (16-14 AWG), 5 male and 5 female quick-disconnects (16-14 AWG; not UL listed), and 30 butt splices (22-10 AWG). Includes a plastic case.

69185K53 ..... **Each** $54.44

Terminals Connected to Wire

No need to strip or crimp, these make connections fast and easy. They have tin-plated copper terminals, except quick-disconnects which are tin-plated brass. Wires are made of tinned copper wire strands insulated with PVC. Rated to 300 volts. UL listed and CSA certified.

Quick-disconnect terminals are nylon insulated. Tab size is 0.250″ Wd.×0.032″ Thick. ***Ring*** and ***flanged spade*** terminals have vinyl-insulated barrels and accept #10 (.190″) stud size. Ring width is 0.31″; spade width is 0.35″. *22*, *18*, and *16 AWG* wire sizes meet UL 1007 (80° C max.)/UL 1569 (105° C max.) requirements. *14 AWG* wire meets UL 1569 (105° C max.) requirements.

To Order: Please specify overall length (6″, 12″, or 24″), wire gauge (22 AWG, 18 AWG, 16 AWG, or 14 AWG, unless noted), and wire color (black, green, red, or white).

For information about wire size (AWG), see page 758.

Twist-On Wire Connectors

Standard

High Temperature

High Temperature with Set Screw

Direct Burial Sleeve

Ultra-High Temperature

Watertight

Obtain a quick, secure connection without crimping. Simply strip wires, insert into the connector, and twist to tighten. Rated to 600 volts, unless noted. UL listed and CSA certified, unless noted.

Standard have a cone-shaped inner coil to secure wires and a plastic outer shell to provide insulation. Rated to 221°F.

High-temperature connectors are similar to standard connectors, but their insulating plastic shell is rated to 302°F. Excellent for higher wattage applications, such as HID lighting and electric heat.

High-temperature connectors with set screw firmly hold wires with a set screw on an inner barrel. An insulating plastic outer shell threads over the inner barrel. Great for high-vibration applications. Rated to 302°F.

Ultra-high temperature connectors are made of porcelain so they can withstand temperatures up to 1200°F.

Watertight connectors are filled with silicone to seal out moisture and prevent corrosion. Suitable for direct burial. Rated to 167°F, unless noted.

Direct burial sleeve connector consists of a twist-on wire connector and plastic insulator tube filled with mineral oil grease. The tube protects your connection from abrasion and the gel creates a moisture-resistant seal. Ideal for irrigation and sprinkler systems, outdoor lighting, and other underground wiring applications. Rated to 120°F.

Twist-On Wire Connector Installation Tools

Installation Tool

Installation Tool/Screwdriver (Shown with Wire Connector)

Reduce excessive wrist twisting and sore fingers with these convenient tools. Use for fast and secure wire connector installation without having to twist conductors.

Power drive installation tool attaches to your power drill or screwdriver for fast, easy installation.

Installation tool/screwdriver provides leverage and comfort when twisting connectors. The handle fits most twist-on connectors and includes a screwdriver with two bits: one slotted blade and one Phillips round blade.

		Each
Power Drive Installation Tool for #10 and Smaller Wire	8859T2	$11.18
Power Drive Installation Tool for #8 and #6 Wire	8859T3	12.73
Installation Tool/Screwdriver	8859T4	19.81

Twist-On Wire Connectors with Wings

Standard and Grounding

Wide Range

Space Saver

Finger Friendly

Wings on these connectors give you a better grip and increased leverage when tightening. Just strip wires, insert into the connector, and twist to tighten. All have insulating plastic outer shells and are rated to 600 volts and 221°F, unless noted. UL listed and CSA certified.

Grounding connector has a hole in the top that allows a single grounding wire through while multiple ground wires remain connected inside the connector.

Wide range connectors cover a wider range of wire sizes yet still fit into cramped outlet boxes. Rigid plastic top and flexible bottom skirt protect the connection and allow it to conform to tight spaces. Also CE approved.

Space saver connectors have a narrow profile that takes up less space than standard wing connectors.

Finger-friendly connectors have soft molding over the wings, making them exceptionally comfortable to grip.

● Not voltage rated; has hole in top for grounding applications.

Snap Plug and Parallel Tap

Combine a snap plug and a parallel tap (sold separately) to tap into a wire with a simple crimp—no cutting or splicing.

Snap plug allows you to rapidly connect and disconnect a wire. This 0.156″ male plug has an insulating sleeve that provides more surface gripping area for easy removal. Has blue nylon insulation with tin-plated copper terminal. Overall length is 0.90″.

Parallel tap is rated to 32 volts and 194°F. It has a black polypropylene housing with tin-plated copper terminal.

Push-On Wire Connectors

Four Wire

DIN-Rail Mount Adapter with Four Four-Wire Connectors

Getting a cramp from crimping? Tired of twisting? Just push these connectors onto your stripped wires for a reliable connection. A clear polycarbonate housing lets you see the connection has been made. You can also mount them to a DIN rail using the adapter sold separately below (adapters required for hazardous-location connectors). They work with both stranded and solid copper wire. All have individual ports for each wire and a tin-plated copper alloy terminal bus with stainless steel spring. Rated to 600 volts and 221° F. UL listed and CSA certified. Green color is for grounding applications.

Hazardous-location connectors require DIN-rail mount adapters (sold separately). Connectors are ATEX category 2 approved and UL listed, Class I, Zone 0, 1, and 2.

Reusable Lift-Off Wire Connectors

Three Wire

If you frequently disconnect and reconnect wires for motor maintenance or other applications, then you're ready for lift-off connectors. Just lift the orange lever to disconnect a wire and push the lever back down to clamp a wire in place. Rated to 600 volts and 185° F. Both have a gray housing and tin-plated copper alloy terminal bus. UL listed.

Insulated Set Screw Connectors

Four Wire

A good alternative to split-bolt connectors, these versatile connectors work in almost any tap or splice application. Just strip your wires, insert your main wire into one of the through-hole ports, then insert each tap wire into either side of each remaining port and tighten the captive screws. One side of each port must remain open. A transparent, fully insulated plastic cover allows visual inspection. Connectors are high-strength aluminum alloy. Suitable for use with copper and aluminum wires. Rated to 600 volts and 194° F. UL listed.

Crimp-On Wire Connectors

Noninsulated

Insulated

Just strip wires, twist them together, insert into connector, and crimp for dependable connections.

Noninsulated connectors are made of tin-plated copper. Voltage ratings don't apply to these connectors.

Insulated connectors have a white nylon sleeve around a copper insert. Rated to 600 volts and 221° F, unless noted. UL listed and CSA certified.

Insulated Set Screw Tap Connectors

T-Tap with Cover

Parallel (Shown without Cover)

To connect a tap wire to a main wire, just strip the wires, lay in your main wire, tighten set screw, then connect your tap wire (choose from T-tap and parallel connections). Attach the insulating plastic cover to complete installation; no insulation taping is required. Made of high strength, tin-plated aluminum alloy, they are suitable for use with copper and aluminum wires. Rated to 600 volts and 194° F. UL listed and CSA certified. Dimensions listed in table do not include cover.

● 12 AWG is the small end of the range if used with aluminum wires.

Compact Insulated Set Screw Connectors

Here's a fast and easy way to connect two or three copper wires in a compact area without the hassle of taping to insulate. Ideal for tight spaces such as cable trays, raceways, wireways, and ducts. Also good for motor leads. Connectors are copper alloy with PVC insulation and brass set screws. Plastic plugs cover the set screw opening to protect against contamination. Rated to 600 volts and 194° F. UL and C-UL listed.

For information about wire size (AWG), see page 758.

Split-Bolt Connectors

Use these connectors for tapping and splicing wire. No special installation tools are needed—just strip wires, insert, and tighten. Insulate with tape in power applications and corrosive environments. All connectors are rated to 600 volts and 194° F. UL listed and CSA certified.

Copper splices are for use with copper and copper weld wire. Suitable for direct burial, except 6921K68. ***Aluminum splices*** can be used with any combination of copper and aluminum wire.

Set Screw Butt Splices

Just insert stripped wires and tighten set screws. Splices are made of high-conductivity aluminum with tin electroplating to prevent corrosion. They're rated to 600 volts and 194° F. UL listed and CSA certified for use with copper and aluminum wire.

Insulated butt splices have an additional transparent cover with trim-to-fit tip to provide electrical insulation and allow for visual inspection.

Sure-Connect Aluminum Lugs

If vibration and temperature changes have you worried about your connections, these are the lugs for you. They have a unique compression design to ensure that your stranded copper or aluminum conductors stay put. They also maintain constant pressure and stay cooler than conventional lugs. Made of corrosion-resistant aluminum alloy.

To install, just insert your wire—the connector grips it as you tighten your nut (nuts and studs not included). Remove the stud to release the wire and reuse the lug. Rated to 2,000 volts and 194° F. UL listed and CSA certified.

Copper Set Screw Lugs

No crimping tools required, just tighten the set screw down onto the wire. Crimpless lugs are ideal for use in power distribution systems and with large motors and generators. They're made of 100% copper for high efficiency (except for 6923K65, which is 90% copper). Rated to 600 volts and 194° F. UL listed and CSA certified when used with stranded copper wire, unless noted.

Offset tongue lugs give you plenty of space to insert your wire. 6923K29 and K31-33 have slotted steel set screws; K51 and K35-39 have steel hex bolts. ***Straight tongue*** lugs allow for more surface contact while saving space. 6923K61 and K62 have slotted steel set screws; K63-65 have hex-socket steel set screws.

Aluminum Set Screw Lugs

Single Wire, One Mounting Hole *Single Wire, Two Mounting Holes* *Dual Wire, One Mounting Hole*

These high-strength, aluminum alloy crimpless lugs are lightweight and have tin-plated connectors for low contact resistance. No special crimping tools are required—just tighten the set screw down onto the wire. All have tin-plated aluminum hex-socket set screws, unless noted. Great for use on electrical distribution systems. Rated to 600 volts and 194° F. UL listed and CSA certified when used with stranded copper or aluminum wire.

● Set screw is zinc-plated steel and has a slotted head.

For information about wire size (AWG), see page 758.

About Compression Crimpers

Crimpers with dies typically produce the most reliable connections. Use the table at right to choose the correct die for your lug and splice. Select die by wire size, color code, or lug markings (table has markings from two prominent manufacturers).

Dieless crimpers offer greater convenience because you don't have to buy and change dies.

Copper Wire Size (AWG)	Color Code	Lug Markings T&B	Lug Markings Burndy
8	Red	21	6
6	Blue	24	7
4	Gray	29	8
2	Brown	33	10
1	Green	37	11
1/0	Pink	42	12
2/0	Black	45	13
3/0	Orange	50	14
4/0	Purple	54	15
250 MCM	Yellow	62	16
300 MCM	White	66H or 66	17
350 MCM	Red	71H or 71	18
400 MCM	Blue	76H or 76	19
500 MCM	Brown	87	21
600 MCM	Green	94H	22
750 MCM	Black	106H	24

Hydraulic Compression Crimpers

Put 12 tons of crimping power in your hands. Each of these tools has a high pressure pumping system that includes a replaceable pressure cartridge good for 10,000 to 12,000 compressions. The tool head swivels 180° for crimping in confined spaces. Use on aluminum and copper compression connectors with solid and stranded wire. Handles are fiberglass. Each crimper includes a plastic carrying case. Overall length is 23″ for 7357K5 and 25⅛″ for 7357K7.

Dies are sold below; crimpers accept U-type dies for Alcoa, Burndy, Panduit, T&B, and Blackburn 12-ton tools.

To Order: For dies, please specify wire size from the table in About Compression Crimpers at the top of the page.

Max. Jaw Opening	For Lug Sizes	For Splice Sizes		Each
1″	8 AWG to 750 MCM	10 AWG to 400 MCM	7357K5	$1,598.02
1⅝″	8 AWG to 750 MCM	8 AWG to 750 MCM	7357K7	1,831.05
Dies			7357K8	113.47
Replacement Pressure Cartridge			7357K6	151.76

Hydraulic Dieless Compression Crimper

You get 6.2 tons of hydraulic power combined with the convenience of a dieless crimper. Just place a lug or splice in the jaws and pump the handles. Crimper releases when you surpass 6.2 tons of force, assuring compression consistency. Use on aluminum and copper connectors with solid and stranded wire from 10 AWG to 500 MCM. It includes a replaceable pressure cartridge, an aluminum alloy 360° swivel head, a rapid-advance two-stage pumping system, fiberglass handles, and a steel carrying case. Overall length is 22″.

		Each
Crimper	69305K59	$2,051.33
Replacement Pressure Cartridge	7357K6	151.76

Mechanical Rotating-Die Compression Crimper

Since the dies are captive in the rotating head, you won't have to worry about losing them. Dies rotate to fit stranded wire with 8 AWG to 3/0 AWG aluminum and 6 AWG to 250 MCM copper lugs, splices, and battery terminals (also works with heavy duty power lugs—you must use comparable battery terminal settings). The controlled-cycle ratchet mechanism won't open until the crimp is completed, so you'll make quality crimps every time. The compound action exerts five tons of equal pressure from all four sides, creating a diamond-shaped crimp. A reference chart on the tool eliminates guesswork by showing you which die to use. Crimper is hardened steel. Handles are enamel-coated steel with rubber grips. Overall length is 25″.

7333K15 ..... Each $243.37

Mechanical Dieless Compression Crimpers

Dieless means there are no dies to buy, change, or lose. A reference chart on the tool gives you the right settings, and a single screw makes adjustments easy. They are more economical than hydraulic crimpers and have a compact head design for convenience in confined areas. Head also has a machined flat surface for standing the tool in a working position on a bench. Use on solid and stranded wire. Body is steel and handles are fiberglass with rubber hand grips. Handles telescope for increased leverage. Overall length with handles retracted is 27″.

Copper Lug/Splice Range	Aluminum Lug/Splice Range		Each
8 AWG to 250 MCM	8 AWG to 4/0	7996K12	$364.93
8 AWG to 500 MCM	8 AWG to 500 MCM	7996K11	739.15

Compression Lugs

Standard Barrel One Hole — *Standard Barrel Two Holes* — *Long Barrel Two Holes*

Seamless tin-plated copper or aluminum tubing provides secure connections. Rated to 600 volts and 194° F. UL listed and CSA certified, unless noted. ***Copper lugs*** are for use with stranded copper wires only. Lugs are color coded by wire size (see About Compression Crimpers above for colors). *Long-barrel lugs* allow for more than one crimp for a secure connection. ***Aluminum lugs*** can be used with stranded aluminum and copper wires.

♣ #10 stud size is 0.190″. ■ 1/2″ stud size. ● Not UL listed.

For information about wire size (AWG), see page 758.

Heavy-Gauge Compression Butt Splices

Perfect for heavier gauge applications such as electrical distribution systems, these splices have a center stop that ensures proper wire insertion depth. Splices are seamless, high-conductivity tin-plated copper or aluminum. Wire size, color, and crimping die reference number are marked on each splice. Rated to 600 volts and 194° F. UL listed and CSA certified, unless noted.

Use ***copper*** splices with stranded copper wire only. *Long barrel* allow more than one crimp for a more secure connection. Use ***aluminum*** splices with stranded aluminum and copper wire.

Underground Heat-Shrink Butt Splices

Make watertight, abrasion-resistant underground connections with these kits. The heavy-wall polyolefin heat-shrink tubing included with each kit fits over the copper butt splice connector. They work with both solid and stranded wire and are designed to withstand burial in rocky soil. Minimum shrink temperature is 248° F. Rated to 600 volts and 194° F. UL listed.

Wire splice kits include a set screw butt splice connector for use with copper and aluminum wire. ***UF (underground feeder) cable splice kit*** includes a set screw butt splice connector for use with UF copper cable.

Wire Wrap Gun

Terminal Being Wrapped

Wire Wrapped Terminal

Wire Unwrapping Tool

Want a solderless connection that can be removed later for rewiring? This plastic gun lets you quickly and easily wrap wire around terminals. Simply select the required bit and sleeve (sold separately below) and insert a stripped solid wire into the wire slot. Anchor the wire through the notch on the bit, place the tool over your terminal, then squeeze the trigger. Use it with square or rectangular wire wrap terminals. Maximum terminal post diagonal length is 0.073". *Wire unwrapping tool* (sold separately below) is steel with a plastic handle.

		Each
Wire Wrap Gun (5 3/8" Lg. × 1" Wd. × 5 3/8" Ht.)	8136K11	$112.28
Wire Unwrapping Tool (5" Lg.)	8136K33	21.00
		Per Set
Bit and Sleeve for 26 AWG Wire	8136K22	$61.44
Bit and Sleeve for 24-22 AWG Wire	8136K21	56.33

Cable Jacket Strippers

A unique swivel blade makes end and center strips on cable outer jacketing up to 5/32" thick. The swivel blade turns in the direction you move the tool for better stripping. Handle is ABS thermoplastic with a steel blade. Use on PVC, rubber, nylon, polyimide, fiberglass, fabric, and other materials with solid and stranded wire.

	O'all Lg.		Each
Stripper for 1/4" to 3/4" OD Cable	5 3/4"	7312K11	$27.67
Stripper for 3/4" to 1 1/2" OD Cable	6 3/8"	7312K12	34.67
			Per Pair
Replacement Blades		7312K13	$11.71

Comfort-Grip Cable Jacket Stripper

Specially designed phenolic handle fits the shape of your hand and prevents skinned knuckles caused by hitting the cable sheath. Use to strip sheaths from plastic- and fabric-covered solid and stranded wire. Includes two extra blades. Overall length is 6".

		Each
Stripper	7298K11	$50.75
Replacement Blade Guide Retainer	7298K15	17.35

Replacement Blades (Pkg. of 6)	7298K13	$4.16

Auto-Size Squeeze-n-Strip Flat Cable Stripper

Just feed cable through the front and squeeze the handle to strip cable in the middle or end. The tool's high alloy steel blades automatically adjust for cable size and pull insulation off the cable. Perfect for stripping flat cable up to 15/32" wide with 18-10 AWG solid and stranded conductors. Strips both the outer sheathing and inner insulation without nicking the wire. Ideal for Romex, telephone wire, and ribbon cables. Body is thermoplastic. Overall length is 6 3/4".

8079K11 ..... **Each** $81.20

Multipurpose Wire Stripper

Sixteen tools in one, this handy device can strip and cut 20-10 AWG solid and stranded copper wire. It has a plier nose (great for pulling and looping wire), plus three flat-head screwdrivers, a Phillips screwdriver, wire bender, awl, inch and metric rulers, metal file, wood file, serrated drop point knife, and can/bottle opener. Made of Type 440 stainless steel. Size is 4" × 1 1/8". Includes a nylon pouch with belt loop.

7893K5 ..... **Each** $60.60

For information about wire size (AWG), see page 758.

Insulation-Melting Wire Stripper

Tips for 25-10 AWG

Repl. Tips for 36-26 AWG

This stripper gives you the cleanest possible strip by melting off the insulation instead of cutting it like conventional strippers. It also eliminates the risk of nicking the conductor. Just insert wire, press button to heat tip and melt the wire insulation, and pull off insulation sleeve. The tip heats from ambient to selected temperatures up to 1,700° F in two seconds. Works well on PTFE, Kynar, nylon, vinyl, and neoprene, removing insulation up to 1½″ in length from solid, stranded, and shielded wire. Tips included for 36-26 AWG (tips for 25-10 AWG sold separately). Has a thermoplastic housing and a temperature controller. Weighing just 2 lbs., it can be held or mounted in the included metal bench-top stand. Overall length is 8″. Operates on 120 VAC and has a 6.5-ft. long power cord with three-prong plug. UL listed.

Tips for 25-10 AWG	69165K93	$10.97
Replacement Tips for 36-26 AWG	69165K94	10.97

Wire Strippers

Auto-Size Squeeze-n-Strip Wire Strippers

Single Wire

Multiwire

Squeeze the handles and the blades adjust to the wire size and pull the insulation off, giving you a precise, consistent strip with no damage to the wire. They strip PVC-insulated solid and stranded wire. Wire feeds through the front for working in tight spaces. Both have built-in wire cutters and an adjustable stop to set strip length. Overall length is 7½″.

Single-wire stripper strips one wire at a time. It's made of reinforced fiberglass and has a 0.31″ maximum strip length. ***Multiwire*** stripper strips multiple wires of the same gauge simultaneously. It's made of reinforced plastic and has a 0.75″ maximum strip length.

	For Wire Sizes		Each
Single Wire	20-12 AWG	7221K61	$40.98
Multiwire	34-8 AWG	7221K24	63.18

Plier-Nose Wire Strippers

Standard Grip

Ergonomic Grip

These lightweight, smooth-operating tools have a plier nose for pulling wire, holes for looping wire, and built-in wire cutters. All have a spring return to reduce user fatigue. Made of steel. ***Standard grip*** have plastic-coated handles. ***Ergonomic grip*** have curved cushioned handles plus bolt cutters.

1,000 VAC Insulated Handle Wire Strippers

Plier Nose

V-Notch

Insulated, cushioned handles provide protection when working with up to 1,000 volts. For solid and stranded wire. Made of steel. ***Plier-nose*** style has holes for pulling and looping wire. ***V-notch*** style has a screw with locknut to set tool for wire from 22-10 AWG. Wire feeds through the front for work in tight spaces.

	O'all Lg.		Each
Plier Nose for 20-10 AWG Wire	7⅝″	71495K88	$44.55
V-Notch for 22-10 AWG Wire	6″	71495K85	59.28

Squeeze-n-Strip Wire Strippers

Just insert wire into the proper blade hole and squeeze. Blade closes and moves to pull insulation off solid and stranded wire quickly and consistently. Frame is die cast zinc with thermoplastic grips.

Replacement blades include both upper and lower blades.

For Wire Sizes	O'all Lg.	Strippers	Each	Repl. Blades	Each

Stripper Kit— Includes one moving blade stripper and one pair of each of the following blades: 30-20 AWG, 22-10 AWG, RG-59, and RG-58.

7292K66 ..... **Each** $60.69

Compact Precise-Length Wire Strippers

So small they can fit in your pocket, these tools deliver consistent stripping. Just pass wire through the hole and squeeze the handle—your solid and stranded wire will be stripped every time without nicking the wire. A slide adjustment allows you to set the strip length up to 2″ (50 mm). Housing is made of plastic; tips are made of steel. An AWG-to-mm conversion table is printed on the strippers.

ESD-safe stripper is perfect where static-free conditions are required.

	O'all Lg.		Each
Standard for 36-26 AWG	3¾″	7897K13	$69.63
Standard for 30-20 AWG	3¾″	7897K11	61.58
ESD-Safe for 30-20 AWG	3¾″	7897K12	74.25

Compact V-Notch Wire Strippers

Screw Adjustment

Cam Dial Adjustment

Get quick stripping action without nicking the wire. These tools have V-notch blades that fit a wide range of wire sizes. Made of steel with cushioned handles. All have an adjustment feature that sets the blade opening for repeated, consistent stripping.

Screw-adjustment styles have a set screw that slides in a track the length of the handle. Use to strip and cut solid and stranded 20-10 AWG wire. Wire stripper *with spring return* automatically opens blades when you release pressure on the handles.

Cam dial adjustment style has a dial that instantly adjusts to one of eight specific AWG wire sizes within the 26-12 AWG range. Use to strip and cut solid and stranded 26-12 AWG wire.

Adjustment Style	O'all Lg.		Each
Screw Adjustment	5″	7660K11	$11.16
Screw Adjustment w/Spring Return	5″	7660K12	11.31
Cam Dial Adjustment	5⅜″	7660K14	7.05

Plier-Nose Wire Stripper with Built-in Voltage Detector

The handle flashes and beeps when it detects a live circuit, providing a safety check before you work on wires. It has a plier nose for pulling wire, holes for looping wire, and bolt cutters. For 18-10 AWG solid and 20-12 AWG stranded wire. Made of stainless steel with cushioned handles. Two 1.5-volt batteries included. UL listed.

	O'all Lg.		Each
Stripper	7″	8802T11	$29.08
Replacement Battery		7604K81	1.76

For information about wire size (AWG), see page 758.

Multipurpose Wire Strippers/Crimpers

Self-Adjusting Squeeze-n-Strip Stripper/Crimper

Blade self-adjusts to the wire size and removes insulation as handle is squeezed. Consistently strips 24-10 AWG stranded and solid wire and crimps 16-10 AWG insulated and noninsulated terminals. Has a built-in wire cutter and a wire stop that can be set to strip lengths up to ¾″. It is steel with plastic-coated handles. Overall length is 8″.

8372K11 ..... **Each** $47.08

Stripper/Crimper/Bolt Cutter

Strips 26-10 AWG stranded wire and 22-8 AWG solid wire; crimps 26-10 AWG insulated and 22-10 AWG noninsulated terminals; and cuts bolt sizes 4-40, 6-32, 8-32, 10-24, and 10-32. Tool is steel with cushioned handles and has a wire cutter, a universal automotive crimping notch, and holes for looping wire. Overall length is 8½″.

7007K92 ..... **Each** $14.57

Plier-Nose Stripper/Crimper/Bolt Cutters

Standard and Metric

1,000 Volt

***Standard*—** Plier nose is great for pulling and looping wire. Strips 22-10 AWG stranded and solid wire. Crimps 22-10 AWG insulated and noninsulated terminals and 7 mm and 8 mm automotive noninsulated terminals. Cuts bolt sizes 4-40, 5-40, 6-32, 8-32, 10-24, and 10-32. Tool also has a wire cutter. It is steel with cushioned handles. Overall length is 8¼″.

69275K84 ..... **Each** $17.17

***Metric*—** Similar to the plier-nose tool above, except the wire-stripping holes are marked with metric and AWG sizes. Strips 0.75 to 6 mm (22-10 AWG) stranded and solid wire. Crimps 1.5, 2.5, and 6 mm (22-10 AWG) insulated and noninsulated terminals and 7 mm and 8 mm automotive noninsulated terminals. Cuts bolt sizes 2.6, 3, 3.5, 4, 4.5, and 5 mm.

69275K86 ..... **Each** $26.42

***1,000 Volt*—** The bonded, double-layer extra-long insulated handles provide protection up to 1,000 volts. Tool has a plier nose for pulling and looping wire. Strips 22-10 AWG stranded and solid wire. Crimps 22-10 AWG insulated terminals and 7 mm and 8 mm noninsulated terminals. Cuts bolt sizes 4-40, 5-40, 6-32, 8-32, 10-24, and 10-32. Tool also has a wire cutter and is made of steel. Overall length is 9½″.

6908K87 ..... **Each** $43.75

Quick-Change Ratchet Crimper

Different applications require different terminals—they shouldn't require different crimpers. The dies of this ratcheting tool snap quickly in and out, so it's easy to change from one type of terminal to another (dies sold separately below). Crimper is plastic-covered steel. Dies are one piece and marked with a drawing of the terminal style, so they're easy to identify. O'all length is 8⅞″.

Crimper

8568T1 ..... **Each** $65.33

Crimpers

Ratchet Crimpers

Standard for Insulated Ring and Spade Terminals

High Force

Built-in ratchet ensures a complete crimp every time. Tools feature a safety release that allows you to stop a faulty crimp before the crimping cycle is complete. You can change dies using a screwdriver. Made of steel with molded plastic handles.

Crimper for noninsulated terminals has four crimping stations. Crimpers for insulated terminals have three crimping stations that are color coded by size. Crimper for open-barrel contacts has three crimping stations.

Standard styles produce reliable crimps at an economical price. Overall length is 8⅞″. ***High force*** style gives you more than one ton of crimping force with less effort to reduce fatigue. Ergonomically designed for user comfort. Overall length is 10″.

For Terminal Style	For Wire Size (AWG)	Crimpers	Each	Repl. Die Sets	Each

Plier Crimpers

Standard

1,000 Volt

They may look like ordinary pliers, but these have a crimping die marked for insulated and noninsulated terminals from 22-10 AWG. Nose has a wire cutter. Made of steel with a 9¾″ overall length.

Standard style has cushioned handles. *1,000 volt insulated-handle* style protects you from shocks when working on or near energized equipment.

		Each
Standard	**7289K1**	$29.51
1,000 Volt Insulated Handle	**7289K2**	53.49

Air-Powered Crimpers

Air power lets you keep crimping with less fatigue and greater crimp consistency. Crimpers work with 22-10 AWG insulated terminals. Operate on 85 to 95 psi air supply. Air inlet connection is ⅛″ NPT male. Tools are steel with an overall length of 12″. All crimpers include a steel die set.

For Insulated Terminal Style	Crimpers	Each	Repl. Die Sets	Each
Rings, Spades, Splices	**7754K1**	$1,182.09	**7754K4**	$356.86
Quick-Disconnects	**7754K2**	1,182.09	**7754K5**	429.85

Pin-and-Socket Connector Crimper

Designed for crimping and splicing pins and sockets used in connectors. Also good for noninsulated, open barrel, closed barrel, and flag terminals. Tool can cut bolt sizes 4-40, 6-32, 8-32, 10-24, and 10-32. Made of steel with cushioned handles. Overall length is 8½″.

7179K41 ..... **Each** $41.70

Wire Cutting Pliers

Cut soft steel wire, copper wire, and cable with these pliers, featuring hardened cutting edges for long-lasting sharpness and durability. They produce a deep, pointed, pinched end. Both have oval-shaped heads and are made of forged steel.

For Max. Wire Size, AWG (Dia.)	O'all Lg.	Jaw Lg.		Each
12 (0.080″)	7¼″	51/64″	**8522A11**	$13.68
6 (0.162″)	8″	51/64″	**8522A12**	20.52

About 0.2″ to 0.85″ Face Diameter Multipole Connectors

Simplify your hardwired connections to make maintenance much easier. With multipole connectors you can quickly replace a damaged component or cable without hardwiring, saving you labor costs and reducing your system downtime. Primarily used to connect proximity sensors, photoelectric sensors, and limit switches, these connectors are commonly referred to as nano (or pico), micro, and mini connectors.

If you are looking for a multipole connector for a new application, the table below will direct you to the catalog page you need. When replacing an existing connector, consider the following:

Face Diameter— Measure the face diameter of your plug or receptacle as shown in the illustration at right. Do not include the threading or coupling nut in your measurement.

Keyway— Most have keyways on the face that prevent mismating. Each keyway on the female aligns with a keyway notch on the male. Do you have a single or dual keyway?

Number of Poles— Determine by counting the number of pins on a male plug or receptacle, or by deciding how many wires your device will need for power and control.

Gender and Thread Location— The threading of the collar or locknut plays an important role. Threading is defined as internal or external. You need both the gender and threading to be opposites to join multipole connectors. For example, a male plug with external threads will mate with a female plug with internal threads, but a male plug with internal threads will not mate with a female plug with internal threads.

Plug or Receptacle— Plugs typically have cables attached while receptacles have wire leads and are mounted in panels. We also offer cables that have plugs on each end.

The table below summarizes key aspects of the different multipole connector sizes and will direct you to the correct catalog page. Check the individual presentations for exact ratings.

Face Dia.	Common Name	Keyway	Number of Poles	Current Range (amps)	Max. Voltage (VAC/VDC)	Materials Available	Typical Application	Catalog Page
0.2″	Nano, Pico	None	3-5	3-4	60/75	PVC, Thermoplastic	8 mm dia. and smaller sensors	774
0.3″	Micro	Single, Dual	2-5	4-5	300/300	PVC, Thermoplastic, Rubber	12 mm and 18 mm dia. sensors	775-776
0.55″-0.8″	Mini	Single	2-12	5-13	600/600	PVC, Thermoplastic, Rubber	18 mm and 30 mm dia. sensors	776-777
0.85″	___	Single	3-4	15-30	600/600	Rubber	Lighting, small motors	778

Multipole Connectors

0.2″ Face Diameter Nano Connectors

Also called pico connectors, these are the tiniest multipole connectors we offer. Excellent for low-current devices such as 8 mm dia. and smaller proximity sensors, miniature photoelectric sensors, and other miniature control components. They do not have a keyway. All except ***plugs*** without cable (6889K) are UL listed and CSA certified.

Plugs

These black thermoplastic plugs meet IP67 for protection against temporary water submersion and are rated to 185° F. All accept 0.14″ to 0.2″ dia. cable with up to 20 AWG conductors except screw-terminal plugs, which accept up to 22 AWG. All 90° plugs have solder terminals. Other plugs are available with solder and screw terminals. **To Order:** For straight plugs, please specify solder or screw terminals.

♣ Same face as five pole with one or two poles not used. ▲ Has ½″-14 NPT threads. ♦ Same face as four pole with one pole not used.

Harsh Environment Plugs with 12-ft. Cable and Receptacles with 12″ Leads

Wire in these durable connectors where resistance to abrasion, oil, and welding slag is a must. ***Plugs*** are rubber molded to 12 ft. of yellow rubber-jacketed 18 AWG conductor cable (13 ft. for single keyway). Rated to 194° F. ***Receptacles*** are stainless steel. They have 12″ long PVC-jacketed 18 AWG wire leads. Male receptacles have ½″ NPT threads; female receptacles have ¼″ NPT threads on the wire-lead side. Rated to 176° F.

For information about multipole connectors, see page 774. For information about NEMA ratings, see page 843.

0.3″ Face Diameter Quick-n-Secure Micro Connectors

4 Pole

Get a reliable connection with just a push. ***Male plugs*** connect to the ***female receptacle***, and ***female plugs*** connect to the ***male receptacle***. Female plugs and receptacle can also be connected to male sensors and standard multipole connectors with external threads; ***adapter*** is required when using female plugs. *Note:* Male and female plugs cannot be connected together.

All connectors have four poles and a single keyway (female plugs have a five-pole face with the center hole not used). They are IP68 rated for water submersion. Rated 4 amps @ 250 VAC. Maximum temperature is 194° F. CSA certified.

Plugs

Often used to turn an existing cable into a quick-disconnect cable, or to replace a damaged connector on an existing cable. To assemble, just insert cable (0.13″ to 0.26″ dia. up to 18 AWG) into plug, attach wires to the screw terminals, and screw the plug together. Made of nylon.

Female Plug Adapter ..... 8902T24 Each $12.66

0.55″ to 0.8″ Face Diameter Mini Connectors

Capable of carrying higher currents than 0.2″ and 0.3″ face dia. connectors, these are great for 18 mm and 30 mm dia. proximity sensors and limit switches, even in washdown environments. All are single keyway and are rated for water submersion. All meet IP68 and NEMA 6P except ***plugs*** without cable (7152K), which are not NEMA 6P rated.

Plugs

Often used to turn an existing cable into a quick-disconnect cable, or to replace a damaged connector on an existing cable. To assemble, just insert cable (0.2″ to 0.48″ dia. up to 15 AWG) into plug, attach wires to the screw terminals, and screw the plug together. Made of thermoplastic. Rated to 176° F. CSA certified.

Square Solenoid Valve Connectors

Make connections with hydraulic valves, pneumatic valves, motors, pumps, and pressure switches. Connectors meet DIN 43650 standard except Style C connectors with 9.4 mm industrial standard contact distance. Contact distance is the distance from the center of one pin or slot to the center of the opposite side pin or slot. All have a durable thermoplastic housing and gasket to meet IP65 for dust and splash protection, except *LED plugs with cable*, which meet IP67.

Female plugs have a right-angle design to fit easily into restricted spaces. They have screw terminals and a vibration-resistant central-locking screw. Rated to 194° F. All are UL recognized except 4985K16.

Style A male receptacles have a ½″ NPT male connection and solder terminals with seals. Rated to 257° F. ***Style C male receptacles*** include two mounting screws for installation and have solder terminals with seals. They are rated to 194° F. Connectors with 8 mm contact distance are UL recognized.

LED plugs with cable have an easy-to-spot yellow LED that indicates power to the plug. Rated to 176° F. *Style A* are molded to 18 AWG PVC-jacketed cable. *Style C* are molded to 20 AWG polyurethane-jacketed cable.

For information about multipole connectors, see page 774. For information about NEMA ratings, see page 843.

0.85″ Face Diameter Harsh Environment Connectors

The largest connectors in the multipole family, these have the highest current-carrying capacity and provide excellent resistance to abrasion, oil, and welding slag. All are single keyway and rated to 221°F. They meet IP68 and NEMA 6P for protection against water submersion. UL recognized and CSA certified.

Plugs are rubber and come with 6 ft. of molded, yellow rubber-jacketed oil-resistant (SOW) cable. ***Receptacles*** have 12″ long PVC-jacketed wire leads. All have ½″-14 NPS external threads on the wire-lead side for panel mounting. Body is thermoplastic.

7 Pole (16S-1)

10 Pole (18-1)

14 Pole (20-27)

17 Pole (20-29)

For applications with high vibration and repeated connection and disconnection, these are the toughest connectors. They meet MIL-C-5015, so they're interchangeable with other manufacturers' products. Their aluminum alloy housing has a green zinc finish and solder terminals. All use 20-16 AWG wire. Rated to 13 amps. Temperature range is –67° to +257°F.

Plugs have an integral cable clamp. ***Receptacles*** have four 0.120″ dia. mounting holes.

★ Poles B, C, F, and G are rated 500 VAC/700 VDC.

Weatherproof Low Voltage DC Pin-and-Socket Connectors

Also known as weather-pack connectors, these low voltage DC connectors are designed to withstand moisture, chemicals, and extreme temperatures, so they're great for harsh environments. Applications include fork lifts, trucks, and trailer lighting.

A complete connector requires a plug, a receptacle, and enough pins, sockets, and wire seals for the number of poles you are connecting. Choose your own components (see ***plugs, receptacles, pins, sockets,*** and ***wire seals,*** sold separately below) or select one of the ***kits*** shown at right. To assemble, position wire seal on the wire, insert stripped wires into pins or sockets, crimp, then insert the pins or sockets into a plug or receptacle. Rated 20 amps @ 16 VDC per pole.

Plugs and Receptacles

Made of heat-stabilized black nylon. Temperature range is –40° to +257° F.

Non-Ratchet Crimper	9171T9	53.76

Pin-and-Socket Connectors

Have more poles than you have space to connect them? Install these small, lightweight connectors by crimping a pin or socket onto your wire and inserting it into the plug or receptacle housing. A complete connector requires a plug, a receptacle, and enough pins and sockets for the number of poles you're connecting. Choose your own components (see ***plugs, receptacles, pins,*** and ***sockets,*** sold separately) or select one of the ***assembled connectors*** shown below.

Plugs and Receptacles

All are made of white nylon and rated to 221° F. ***600 VAC connectors*** lock together for a secure connection. UL recognized and CSA certified.

Side-Entry Hood with Top-Entry Base

Top-Entry Hood with Cable Coupler Base

Connector Kit Top Entry

Surrounded and securely locked, your connections are protected from the environment with these slender connectors. Great for applications requiring quick disconnections for repair or replacement. A complete connector consists of a female insert, male insert, hood, and base. All are UL recognized and CSA certified.

Inserts

Made of thermoplastic and include silver-plated copper alloy pins and sockets. They also have easy screw-in terminations. Any hood and base below will work with the inserts.

No. of Poles	Per Pole Amps	VAC/VDC	For Wire Size (AWG)	Female Inserts	Each	Male Inserts	Each

For information about NEMA ratings, see page 843.

Enclosed Rectangular Pin-and-Socket Connectors

Designed for harsh indoor and outdoor environments, these rugged metallic enclosed connectors bring quick-disconnect convenience to everything from machine-tool control panels to mainframe computer systems. Use them for signal and power circuits. Select a male insert, female insert, hood, and base for a complete connector, or choose a kit that fits your needs. When mated, these components create a connector that meets NEMA 4 and 12 for protection from washdowns and oil seepage. Rated to 257° F.

Inserts are made of thermoplastic with silver-plated copper-alloy pins and sockets. They're keyed to prevent mismating and feature easy screw-in termination for 20-14 AWG wire, unless noted. UL recognized and CSA certified, unless noted.

Hoods and Bases

Housing is powder-coated die cast aluminum alloy (unless noted) with Buna-N gaskets except corrosion-resistant units, which have a black powder-coated finish with stainless steel hardware. The hood hub is where the cable enters the hood. All hood hubs are NPT female. Top and side entry refers to where cable is inserted. ***Bases*** have four mounting holes. Cover (included with base) is designed to protect the base when the hood is disconnected. ***Corrosion-resistant*** units are rated NEMA 4X for protection against corrosive agents.

High-Amp Kits

Both connectors have side entry and a powder-coated die cast aluminum housing with Buna-N gaskets. The four-pole connector has two control pins to prevent arcing if it is disconnected before the power is turned off. Ideal for brakes or thermo sensors on large motors. Control pins are rated to 300 VAC. For 16-6 AWG wire. The six-pole kit is for 10 AWG wire.

No. of Poles	Hood Hub Size, NPT	Amps Per Pole @ 600 VAC/VDC	Mounting Hole Dia.	Lg.	Wd.	Ht.	Base		Each

For information about NEMA ratings, see page 843.

Modular Connectors

Create your own custom single- or multipole connectors with these modular components. Just crimp a contact onto your wire, then insert into a housing to create a genderless connector. Mate with another connector for a reliable connection with low contact resistance. They are easily stacked to form multipole connectors. All housings are polycarbonate and contacts are silver-plated copper, unless noted. An internal stainless steel spring ensures that the contacts maintain constant pressure. The given amp rating is based on a single-pole configuration using the largest wire shown within each range. Rated to 221°F. UL recognized and CSA certified.

Connector kits consist of housings with contacts. ***Four-pole enclosure*** for 15-, 30-, and 45-amp connectors covers four complete connectors in one unit. Color is black.

To Order: For Connector Kits and Housings, please specify black, blue, green, red, or white.

Four-Pole Enclosure for 15-, 30-, and 45-amp Connectors ..... 8026K19 Each $3.95

■ Contacts are tin-plated copper.

Nylon Pin-and-Sleeve Plugs, Connectors, and Receptacles (IEC 309)

By meeting international pin-and-sleeve standards IEC 309-1 and 309-2, these rugged nylon-housed plugs, connectors, and receptacles are fully interchangeable with other manufacturers' IEC 309 devices. They're safer than steel because they're nonconductive. Ideal for temporary power systems and portable processing equipment. All devices are three pole, four wire (three power pins and one larger grounding pin) and are for use in three-phase voltage systems. They have a single keyway design with brass pins and sleeves. Devices are color coded by voltage (240 and 250 VAC are blue, 480 VAC are red). Housings are sized by amp rating to prevent incorrect mating. All meet IP67 for protection from water projected from a nozzle. UL listed, CSA certified, and CE approved, unless noted. **To Order:** Please specify voltage: 250 or 480 VAC, unless noted.

Switch receptacles have a mechanical interlock that prevents disconnecting the plug until power is switched off. Power cannot be switched on unless plug is properly inserted.

Aluminum Pin-and-Sleeve Plugs, Connectors, and Receptacles (UL 1686)

When used together, these plugs, connectors, and receptacles maintain a NEMA 4X watertight, corrosion-resistant connection and meet UL 1686 standards. To connect, just tighten the locking ring on the plug. They are fully interchangeable with UL1686 configured and listed devices including Crouse-Hinds Arktite, Appleton Powertite, and Killark Versamate. Housed in copper-free aluminum with an epoxy/polyester finish, they supply power to both fixed and portable electrical equipment including pumps, welders, and blowers. All have a single keyway. Contacts are brass with a beryllium-copper spring tensioner. Cable diameter range is 0.55″-1.2″ for 30 amp, 0.65″-1.5″ for 60 amp, and 0.88″-1.7″ for 100 amp devices. Rated to 600 VAC (50-400 Hz) and 250 VDC. UL listed and CSA certified.

Receptacles include a mounting box with a conduit entry hole (hub size in table is NPT female and refers to the conduit entry hole size).

Safe Break Pin-to-Pin Plugs, Connectors, and Receptacles

No need to install a separate disconnect switch—plug, connector, and receptacle combinations have spring-loaded pins that make "safe break" switch-like connections, so you can connect and disconnect with the power on. They can withstand a 100,000-amp short circuit. Made of fiberglass-reinforced polyester with corrosion-resistant silver-nickel pin contacts. Connectors and receptacles have a locking tab that holds the plug to complete the connection. Together, components form a connection that meets NEMA 4X and IP67 for washdowns and corrosion. UL 2682 listed as a switch-rated plug and receptacle for branch circuit disconnect switching and motor circuit disconnect switching. CSA certified.

Plugs are three pole, four wire (three power pins plus one ground pin). ***Receptacles*** have a 30° angle and junction box with conduit entry hole (hub size in table is NPT female and refers to the conduit entry hole size).

To Order: For 20 amp, please specify voltage: 250 or 480 VAC. For 30 amp and 60 amp, please specify 250, 480, or 600 VAC.

Flat Pin-and-Sleeve Plugs and Connectors

Designed so they won't roll when stepped on, these plugs and connectors reduce the likelihood of slips and falls in high traffic areas. Great for use in theaters and auditoriums. Housing is thermoplastic, unless noted. Pins and sleeves are brass. All plugs and connectors have two poles and one ground. UL and C-UL listed. 20-amp devices are also rated 15 amps @ 250 VAC.

Amps @ 125 VAC	Cord Connection	Accepts Cord	Ht.	Wd.	Color	Male Plugs	Each	Female Connectors	Each

♦ Housing is phenolic. ★EISL stands for Entertainment Industry Stage and Lighting.

High-Amp Single-Pole Plugs and Connectors

These high-amperage connectors handle big jobs such as industrial machinery, amusement park rides, and movie set lighting. Sleeves and contacts are easily assembled and disassembled with a twist and pull. Sleeves are shatter- and crack-resistant thermoplastic elastomer. Contacts are brass. Amp ratings are based on using these plugs and connectors with the largest size 194°F rated cable in the wire size range in the table (amp ratings decrease as cable size decreases). All are rated NEMA 3R for outdoor use. Plugs and connectors with a 125-, 300-, or 400-amp rating are also UL listed and CSA certified.

To Order: Please specify color: black, blue, green, red, or white.

Rotating Connector Rings

Also known as slip rings, these rings maintain an electrical link between a moving and a stationary part. Typically used on rotating jib cranes, rotating signs, and test equipment.

They have 35-amp, 600 VAC single-brush contacts and are made from copper alloy with moisture-resistant insulators and copper graphite brushes. All have 24″ long 10 AWG wire leads. They rotate in either direction and mount in any position. Rings come with a housing and 10″ dia. mounting plate with four ¼″ dia. holes on 9¼″ centers (bolts not included).

No. of Poles	O'all Size, Dia. × Ht.		Each
2	10¼″ × 8½″	7519K42	$584.79
3	10¼″ × 9⅞″	7519K43	632.55
4	10¼″ × 9⅞″	7519K44	662.37
5	10¼″ × 9⅞″	7519K45	734.98

Easy-Install Power Distribution System

This time-saving system replaces hardwiring in power distribution and motor control applications—no need to install conduit or run wires. Connectors have four poles and 0.84″ face diameters, unless otherwise noted. Plugs are gray PVC. UL recognized and rated IP68.

Receptacles come in two styles. Use a *feeder receptacle* to connect your power supply to the feeder cable. Made of aluminum with ½″-14 NPT external threads on one end and four 4-ft. long PVC-jacketed 10 AWG wire leads on the other. To add a motor or other device, connect a *branch receptacle* to the end of a branch cable. The female branch receptacle is aluminum; the male is die cast zinc. Both branch receptacles have four 1-ft. long PVC-jacketed 14 AWG wire leads.

Feeder cables are the main power line and consist of a 16½-ft. gray PVC-jacketed oil-resistant (STOOW) 10/4 AWG cable with plugs.

Tees are used to connect feeder cable. They have one male and two female plugs. On the *reducing tee* one of the female plugs has a 0.55″ face diameter to connect to the branch cable.

Branch cables allow you to connect a device to the feeder cable and consist of a 16½-ft. gray PVC-jacketed oil-resistant (STOOW) 14/4 AWG cable with plugs. The male plug end has a 0.55″ face diameter that connects to the reducing tee or inline reducer.

Inline reducer allows you to connect a male branch cable with a 0.55″ face diameter connection to the end of a female feeder cable.

NEMA Midget Plugs, Connectors, and Receptacles

Perfect for limited-space applications. Blades and contacts are copper alloy. All devices are UL listed and CSA certified.

Plugs and ***connectors*** have a durable nylon housing. ***Receptacles*** have a nylon housing and a flange that allows you to mount the receptacle into a panel cutout (1.1″ dia. mounting hole for ML1-15, 1.25″ dia. for ML2-15 and ML3-15). They come with a nylon or metal flange—choose metal for use in applications with heat and vibration. **To Order:** For receptacles, please specify nylon or nickel-plated brass flange, unless noted.

Turn-lock midget devices are compatible only with other turn-lock midget devices that have the same NEMA style. All except metal-flanged receptacles meet Fed. Spec. WC596. ***Straight-blade*** plugs fit standard NEMA 1-15 and 5-15 connectors and receptacles.

About NEMA Turn-Lock Plugs, Connectors, and Receptacles

Plug

Connector

Receptacle

Filled Slots Depict Plugs	Hollow Slots Depict Connectors/ Receptacles

Turn-lock plugs, connectors, and receptacles lock firmly together with just a twist to prevent accidental disconnection. They conform to National Electrical Manufacturers' Association (NEMA) requirements. The diagrams below show the NEMA configurations for plugs and connectors/receptacles. Different NEMA turn-lock styles are not compatible; for example, an L5-15 plug will not fit an L5-20 receptacle. If you are buying a plug, the NEMA style must match your existing NEMA connector or receptacle (see page 786 for non-NEMA styles or page 787 for NEMA straight-blade styles).

First, check the device you want to replace for a NEMA-style number. It may have a NEMA number ending with a "P," "C," or "R" signifying either a plug, connector, or receptacle. For example, an L5-15P is an L5-15 plug. If there is no style number, match the plug, connector, or receptacle you're replacing to a diagram in the chart below, making sure the voltage and amp ratings match your requirements.

Poles— The number of terminals to which current-carrying (power) conductors are connected.

Wires— The total number of poles plus an equipment grounding connection. Also corresponds to the total number of blades/pins on a plug.

For information about NEMA turn-lock plugs, connectors, and receptacles, see page 784.

Turn-Lock Plugs, Connectors, and Receptacles

All are UL listed and CSA certified, unless noted. ***Plugs*** and ***connectors*** have cord grips for strain relief, brass blades and contacts, and a durable nylon housing. ***Receptacles*** are made of nylon with copper alloy contacts except 7164K33, K14, K38, and K19, which have brass contacts. See page 832 for wall plates. ***Flanged receptacles*** are thermoplastic with brass contacts.

Premium Turn-Lock Plugs, Connectors, and Receptacles

Designed for the toughest applications and recognized by the most discriminating users, these durable devices have a ribbed nylon housing with flared end for easy gripping, an internal dust seal, and a two-piece cord grip for strain relief and maximum retention force. Blades and contacts are brass. UL listed and CSA certified, except those with four power blades, which are not CSA certified. See page 832 for wall plates.

For information about NEMA turn-lock plugs, connectors, and receptacles, see page 784.

High-Visibility Turn-Lock Plugs and Connectors

These high-visibility yellow plugs and connectors are easy to spot. Rugged rubber construction provides more abrasion, ozone, oil, and impact resistance than nylon plugs and connectors. Use in applications with no water or moisture present. All have cord grips for strain relief and brass blades and contacts. UL listed and CSA certified, unless noted.

Watertight High-Visibility Turn-Lock Plugs, Connectors, and Receptacles

A multiple-ring seal keeps out water, oil, and other contaminants. When used together, these yellow plugs, connectors, and receptacles form a connection that meets NEMA 4X, 6P, 12, and IP67 for protection against washdowns, submersion, and corrosive agents. Housing is made of insulated rubber that's heat, weather, and chemical resistant. Blades and contacts are nickel-plated brass. UL listed and CSA certified, unless noted.

Plugs and ***connectors*** have cord grips for strain relief.

Receptacles have a weather-resistant, plastic hinged cover and mounting plate.

Non-NEMA Turn-Lock Plugs, Connectors, and Receptacles

Devices conform to Pass & Seymour Standards and are UL listed. They do not interchange with NEMA devices. All have brass blades and contacts and are made of nylon, except 7175K43, which is made of polycarbonate. See page 832 for wall plates.

Plugs and ***connectors*** have cord grips for strain relief. *Style A* devices, also known as California Standard plugs and connectors, have a 2.4″ OD and are CSA certified. *Styles B* and *C* have a 2.2″ OD.

Weather-Resistant Covers for Turn-Lock Plugs and Connectors

Protect your turn-lock plugs and connectors from moisture and light splashing (not intended for immersion or direct spray). These covers work with NEMA and non-NEMA configurations. Their neoprene construction provides extra cushioning and gives you a good grip on your plug or connector.

About NEMA Straight-Blade Plugs, Connectors, and Receptacles

These devices conform to National Electrical Manufacturers' Association (NEMA) requirements. The diagrams below show the NEMA configurations for plugs and connectors/receptacles. For ground fault circuit interrupter (GFCI) receptacles, see page 927.

Note: The 15-amp (5-15; 6-15) receptacles are not compatible with the 20-amp (5-20; 6-20) plugs. For example, a 5-20 plug will not fit in a 5-15 receptacle.

Commercial Grade— Excellent for general purpose use in office and institutional environments.

Industrial Grade— Provide reliable performance and long electrical life in industrial, manufacturing, and processing environments.

Hospital Grade— A step above industrial grade. To earn this rating plugs, connectors, and receptacles must pass a series of abuse and performance tests beyond industrial-grade requirements. Devices meet or exceed UL standard 498 for hospital devices and Fed. Spec. WC596 (unless noted). All hospital-grade devices have a prominent green dot for unmistakable identification.

Poles— The number of terminals to which current-carrying (power) conductors are connected. ***Wires—*** The total number of poles plus an equipment grounding connection (if applicable). Also corresponds to the total number of blades/pins on a plug.

Industrial-Grade Straight-Blade Plugs, Connectors, and Receptacles

All devices have copper alloy blades and contacts and a nylon housing, unless noted. UL listed and CSA certified, unless noted.

Plugs and ***connectors*** come with an adjustable cord grip for a secure connection. *90° male plugs* have a rotating face allowing cord entry at the most convenient angle, except 7120K41.

Female receptacles fit wall plates (see page 832 for wall plates). **To Order:** Please specify color from those listed (where necessary). *Single female receptacles* are wired from the back. *Duplex female receptacles* can be back and side wired.

Flanged receptacles mount in panel cutouts, are back wired, and are white. *Male flanged receptacles* require a 1.61″ dia. panel cutout; *female flanged receptacles* require a 1.47″ dia. panel cutout.

Note: **The amp rating of your plug should not exceed that of your connector or receptacle.**

Male Flanged Receptacles

Female Flanged Receptacles

For information about NEMA straight-blade plugs, connectors, and receptacles, see page 787

Premium Industrial-Grade Straight-Blade Plugs, Connectors, and Receptacles

It's all the little extras that set these devices apart from the rest. They have nylon housings with copper alloy blades and contacts, unless noted. UL listed and CSA certified, unless noted.

Plugs and ***connectors*** have a ribbed housing (unless noted) and a variable size single-piece cord grip for maximum retention force. ***Receptacles*** can be back and side wired. They have curved wire clamps for maximum wire retention. See page 832 for wall plates. **To Order:** Please specify color: brown or ivory (unless noted).

Note: **The amp rating of your plug should not exceed that of your connector or receptacle.**

Hospital-Grade Straight-Blade Plugs, Connectors, and Receptacles

Looking for a UL hospital-grade device? Just look for the green dot. All have three blades or contacts—two power plus one ground (two pole, three wire). CSA certified. Meet Fed. Spec. WC596, except quad female receptacles.

Plugs and ***connectors*** have brass-alloy blades and contacts.

Male plugs have an impact-resistant black nylon shell and transparent polycarbonate face.

90° male plugs have a rotating face to permit cord entry at the most convenient angle. A transparent polycarbonate housing and cover allow you to see the wiring terminals.

Female connectors have an impact-resistant black nylon housing and transparent polycarbonate face.

Duplex female receptacles can be back and side wired. They have an ivory nylon face. Terminals accept 14-10 AWG wires. See page 832 for wall plates.

Quad female receptacles have a unique design that accepts up to four plugs. Face is polycarbonate. All four outlets are internally connected and can be wired as a single circuit or split into two circuits. Mount directly to a 4″ square outlet box. Terminals accept up to 12 AWG wire. **To Order:** Please specify color: gray, ivory, red, or white.

Note: **The amp rating of your plug should not exceed that of your connector or receptacle.**

EMI-Limiting Straight-Blade Receptacles

Protect computers and other equipment from interference caused by nearby equipment with high currents or surges. These industrial-grade devices have three brass blades or contacts—two power plus one ground (two pole, three wire). They are orange for easy identification. UL listed and CSA certified.

Receptacles, also known as isolated ground receptacles, have a ground terminal that's insulated from the mounting strap so an isolated ground wire can be run through the conduit. They can be back and side wired and have a nylon housing, except quad female receptacles, which are back wired and have a polycarbonate housing.

Male plugs are not EMI limiting but they are orange to match EMI-limiting receptacles.

Note: **The amp rating of your plug should not exceed that of your connector or receptacle.**

High-Visibility Rubber-Coated Straight-Blade Plugs and Connectors

Note: **The amp rating of your plug should not exceed that of your connector or receptacle.**

Male Plugs

Female Connectors

A rugged synthetic rubber housing gives these industrial-grade plugs and connectors excellent impact resistance. The high-visibility yellow color makes them easier to see. Blades and contacts are nickel-plated brass. UL listed.

A power indicating light on 71435K67 gives a clear visual signal when the cord is plugged in.

Watertight High-Visibility Straight-Blade Plugs, Connectors, and Receptacles

The multiple-ring seal and bright yellow synthetic rubber housing are like a built-in raincoat for these industrial-grade devices. They handle water, heat, oils, and chemicals and when mated with each other meet NEMA 4X, 6P, and IP67 for protection from corrosion, washdowns, and submersion. They have three blades—two power plus one ground (two pole, three wire). UL listed and CSA certified, unless noted.

Female connectors also have a one-piece snap-on cover for protection when not in use.

Note: **The amp rating of your plug should not exceed that of your connector or receptacle.**

Corrosion-Resistant High-Visibility Straight-Blade Plugs, Connectors, and Receptacles

Tough on the outside…tough on the inside, too. With an impact- and chemical-resistant yellow nylon housing surrounding nickel-plated brass blades and copper alloy contacts, these industrial-grade devices defy corrosion. All have three blades—two power plus one ground (two pole, three wire). They meet Fed. Spec. WC596 and are UL listed, CSA certified, and CE approved.

Plugs and ***connectors*** have a built-in seal to keep contaminants out. ***Receptacles*** can be back and side wired. See page 832 for wall plates.

Note: **The amp rating of your plug should not exceed that of your connector or receptacle.**

Hazardous-Location Straight-Blade Plugs and Receptacles

Don't take chances where ignitable gas and dust may be present—these aluminum plugs and receptacles are UL listed for Class I, Div. 1 and 2, Groups C and D; Class II, Div. 1 and 2, Groups F and G; and Class III hazardous environments. They have three blades—two power plus one ground (two pole, three wire). Housing is aluminum alloy and blades and contacts are copper alloy. All are CSA certified.

Receptacles have a gray powder-coated epoxy finish and spring-loaded cover for protection when not in use. **To Order:** Please specify ½″, ¾″, or 1″ NPT female threaded hub for conduit entry.

Note: **The amp rating of your plug should not exceed that of your connector or receptacle.**

Quick-Wire Commercial-Grade Straight-Blade Plugs and Connectors

With a hinged, impact-resistant nylon housing, these devices stay in one piece—even while you install your wires. They open for easy installation and their color is high-visibility yellow except NEMA 5-15 and 5-20 models, which are also available in gray. All have three brass blades or contacts—two power plus one ground (two pole, three wire). They meet Fed. Spec. WC596, except NEMA 5-15 models. UL listed.

Hinged Housing

To Order: For NEMA 5-15 and 5-20 models, please specify color: gray or yellow.

Note: **The amp rating of your plug should not exceed that of your connector or receptacle.**

Straight-Blade Plugs with Fuse

Just pop in a fuse to protect your equipment from electrical overload. If the amps exceed your fuse rating, the fuse breaks the circuit.

Plugs are nylon. They are NEMA 5-15, rated to 125 VAC, and have three nickel-plated brass blades—two power plus one ground (two pole, three wire). They accept a ¼-amp to 15-amp fuse. UL listed.

Fuses are sold separately below. They are ceramic, rated to 250 VAC, and ¼″ Dia.×1¼″ Lg. **To Order:** Please specify amp rating.

Plugs

		Each
High-Visibility Yellow Plugs	7155K11	$29.12

For information about NEMA straight-blade plugs, connectors, and receptacles, see page 787.

Flush-Mount Straight-Blade Receptacles

Get industrial-grade quality with a sleek, neat appearance. The nylon face of these receptacles is shaped like a GFCI receptacle, so it lies flush with a wall plate that has a rectangular opening (see page 832 for wall plates). Both have three brass contacts—two power plus one ground (two pole, three wire). They can be back and side wired. Meet Fed. Spec. WC596. UL listed and CSA certified. **To Order:** Please specify color: gray, ivory, or white.

NEMA Style	Rating VAC	Rating Amps		Each
5-15	125	15	69105K6	$8.89
5-20	125	20	69105K7	12.46

Commercial-Grade Straight-Blade Receptacles

If you're looking for a basic straight-blade receptacle, choose these economical commercial-grade devices. Made of nylon, these receptacles have three brass contacts—two power plus one ground (two pole, three wire). They accommodate two- and three-prong straight-blade plugs and fit all standard duplex wall plates (see page 832 for wall plates). Side wired. UL listed and CSA certified. **To Order:** Please specify color: brown, gray, ivory, or white.

NEMA Style	Rating VAC	Rating Amps		Each
5-15	125	15	7159K3	$2.02
5-20	125	20	7159K4	2.62

Straight-Blade Receptacle Tension Tester

Outlets feel a little loose? Find out with this tester—it checks the spring contact tension of two- and three-prong receptacles (NEMA 1-15, 5-15, and 5-20). Tester gives you a separate reading on each straight blade plus the round grounding pin. Made of thermoplastic. Carrying case included.

7474K11 ..... **Each** $62.57

12-VDC Plug, Receptacle, and Extension Cord

Plug

Receptacle

Extension Cord

When used together, these items lock to create a moisture-resistant seal. Used separately, they are compatible with all devices that have standard 12-volt plugs and receptacles. All are rated 15 amps and have a moisture-proof and corrosion-resistant glass-filled nylon housing. Contacts are nickel-plated copper alloy.

Plug has an LED indicator light and a 10-amp, 1/4″ × 1 1/4″ glass tube fuse. Length is 3.65″.

Receptacle has a cap to seal out moisture when not in use. It also has two male quick-disconnect terminals with a 0.25″ Wd. × 0.032″ Thick. tab size.

Extension cord has a plug on one end and a receptacle on the other. Retracted length is 14″; extended length is 6 ft.

		Each
Plug	6860K1	$9.94
Receptacle	6860K2	16.69
Extension Cord	6860K3	34.00

DIN-Rail Mount Straight-Blade Receptacles

Single

Space-Saver Duplex

Mount these receptacles on a DIN rail as outlets for power tools, lights, test equipment, and computers with standard two-prong (NEMA 1-15) and three-prong (NEMA 5-15) straight-blade plugs. Both have screw terminals and three contacts—two power plus one ground (two pole, three wire). They are rated 15 amps @ 120 VAC. UL recognized.

Single-outlet receptacle mounts horizontally, fits both 32 mm (DIN 1) and 35 mm (DIN 3) rails, and accepts 26-12 AWG wire. Made of black PVC. CSA certified.

Space-saver duplex-outlet model mounts vertically, fits 35 mm (DIN 3) rails, and accepts 18-14 AWG wire. Made of ivory nylon.

	O'all Size, Ht. × Wd. × Dp.		Each
Single Outlet	2 3/4″ × 1 3/8″ × 2 1/8″	1671K11	$22.50
Duplex Space-Saver Outlet	3 5/8″ × 1 3/4″ × 1 3/4″	1671K13	26.18

Panel-Mount Straight-Blade Receptacle

Snap this standard three-prong receptacle into panels 0.03″ to 0.07″ thick with a 31/32″ square cutout—no screws or clips needed. It has three brass contacts—two power plus one ground (two pole, three wire). Made of black thermoplastic with self-stripping terminals that pierce the insulation of 14-12 AWG solid-copper wire. Rated 15 amps @ 125 VAC. UL recognized and CSA certified.

7168K1 ..... **Each** 1-9 $2.13 10-Up $1.81

DC Voltage Turn-Lock Plugs and Receptacle

Plug with Wire Entry

Receptacle

A unique locking configuration provides a secure connection and prevents attachment to AC connectors. All are rated for voltages up to 48 VDC and current up to 30 amps. Housing is glass-filled nylon.

Plugs have an O-ring that seals out moisture when connected to a receptacle. Blades are nickel-plated brass. Plug with wire entry has three entry holes for up to 8 AWG wires. Plug with cord entry has a single entry hole for 1/4″ to 1/2″ dia. cord. ***Receptacle*** fits into a 1 1/8″ dia. mounting hole and accepts two or three wires up to 8 AWG. It has corrosion-resistant electrical components and a water-tight cap. Contacts are nickel-plated brass.

		Each
Plug with Wire Entry	2671K11	$22.59
Plug with Cord Entry	2671K13	22.59
Receptacle	2671K15	26.89

Straight-Blade and Turn-Lock Receptacle Adapters

Plugs into Existing Receptacle Style (from)

New Receptacle Style (to)

Just plug one of these handy devices into an existing receptacle or connector for a new configuration. Adapters have a male plug on one end and a female receptacle on the other end. Made of rubber-coated nylon. CSA certified. All except 6379K37 and K33 are UL listed.

Safety Start-Up Power Cords

Cords shut off equipment in the event of a power failure and must be manually reset, preventing automatic restart accidents. They replace the three-wire power cord on equipment driven by small single-phase motors. Connect one end to your equipment switch and the other to your power source. Cords are 14/3 AWG with a 0.36″ OD, and have a black thermoplastic jacket (SJTO). Temp. range is 32° to 167° F. For indoor use. Cords comply with the latest OSHA, NEC, and NFPA safety standards. UL and C-UL recognized.

International Cords

1447K16 *International Cord*

All have a country specific straight-blade male plug on one end and an IEC 320 female connector on the other. Length is 8′2″ and cord OD is 0.30″. They have a PVC jacket. Rated 10 amps @ 250 VAC and 2500 watts, unless noted. Temperature range is –4° to +158° F, unless noted.

Country	Cord Type		Each
Australia	GFC3R/HO5VVF	**1447K11**	$9.48
Europe	HO5VVF3	**1447K13**	9.19
Hong Kong, India, South Africa	HO5VVF3	**1447K14**	9.11
Israel	HO5VVF3	**1447K15**	9.61
Italy	HO5VVF3	**1447K16**	9.41
Japan	VCTF/PVC	**1447K17**♥	7.75
Switzerland	HO5VVF3	**1447K18**	7.90
United Kingdom	HO5VVF3	**1447K19**	10.94

♥ Rated 12 amps @125 VAC and 1500 watts. Temperature range is –4° F to +140° F.

For information about cord type, see page 808. For information about AWG, see page 800.

About Extension Cords

Voltage dissipates over the length of an extension cord—the longer your extension cord, the more voltage lost. Too much voltage loss results in decreased efficiency and operating life of your electrical load. To minimize voltage drop, you must select the proper gauge cord for your electrical load. The proper gauge cord to use depends on the power required by your electrical load and the length of the extension cord. Power may be given in amps or watts (watts=volts×amps). See chart for guidance on the smallest gauge cord to select based on the amps required and cord length.

Note: When using multiple outlet extension cords, total amps drawn by all loads must not exceed the amp rating of the extension cord.

	Minimum Gauge of Cord Required	
Amps	Up to 50 ft.	50 to 100 ft.
13	16 AWG	14 AWG
15	14 AWG	12 AWG
20	12 AWG	10 AWG

Indoor/Outdoor Extension Cords

NEMA 5-15

These round extension cords are UL listed and meet OSHA requirements for outdoor use. They have a molded-on three-prong (NEMA 5-15) plug and connector and are rated @ 125 VAC. Cords with the coldest temperature rating are the most flexible. *Medium duty PVC jacket SJTW dark green* extension cords blend in with outdoor surroundings. ***Extension cords with power-indicating light*** have a light molded into the connector end that illuminates when the cord is plugged in.

Easy-ID Colored Indoor/Outdoor Extension Cords

SJTW Cords

SJEOW Cords with Power-Indicating Light

NEMA 5-15

Make color coding and identification easy with these medium duty round extension cords. They have a three-prong (NEMA 5-15) plug and connector and are rated @ 125 VAC. Meet OSHA requirements. UL and C-UL listed and CSA certified, unless noted.

Cords with power-indicating light have a light molded into the connector end that illuminates when cord is plugged in.

Locking Indoor/Outdoor Extension Cords

A locking mechanism on the connector prevents your device from becoming unplugged from these medium duty round cords. They have a three-prong (NEMA 5-15) plug and connector with a light molded into the connector end that illuminates when the cord is plugged in. They have a vinyl SJTW cord (14/3 AWG cords are yellow and 12/3 AWG cords are red with a blue stripe). Rated @ 125 VAC. Temperature range is -40° to +140° F. UL listed, CSA certified, and OSHA compliant.

Multi-Outlet Extension Cords

NEMA 5-15

Three Outlet — *Three Outlet with Circuit Breaker* — *Four Outlet*

Enjoy the added convenience of multiple outlets. Cords are round and have a three-prong (NEMA 5-15) plug and outlets. Rated 15 amps @ 125 VAC and 1875 watts, unless noted. For indoor and outdoor use, unless noted. Cords with the coldest temperature rating are the most flexible. UL listed and OSHA compliant, unless noted.

Three-outlet easy-ID PVC cord has a black-and-yellow striped jacket. Lighted cords have a power-indicating light molded into the outlet that illuminates when cord is plugged in. ***TPE jackets*** are thermoplastic rubber. ***Three-outlet cords with circuit breaker*** have a resettable circuit breaker that trips at 15 amps to prevent overload damage.

● Rated 13 amps @ 125 VAC and 1625 watts.
♠ Not OSHA compliant. ▲For indoor use only.

Multiple Inline Outlet Indoor/Outdoor Extension Cords

An outlet will always be close by with these cords, thanks to the extra outlets along their entire length. These round cords have a heavy duty PVC jacket (STW) and are rated @ 125 VAC. They have a three-prong (NEMA 5-15) plug and outlets. Each outlet has a power-indicating light; extra inline outlets also have a weather-resistant cover. Cords can be used indoors and outdoors. Color is yellow. Temperature range is –40° to +167°F. UL listed, C-UL listed, and OSHA compliant.

NEMA 5-15

AWG	Lg., ft.	Cord OD	No. of Outlets	Rating Amps	Rating Watts		Each
14/3	25	0.53″	3	15	1875	**7591K42**	$34.92
12/3	50	0.60″	3	15	1875	**7591K43**	94.99

Extension Cords

For information about NEMA plugs and receptacles, see pgs. 784 and 787. For information about AWG, see pg. 800.
For information about cord type, see pg. 808. For information about extension cords, see pg. 792.

Turn-Lock and Straight-Blade Extension Cords

Turn-Lock Cord

NEMA L5-20 · NEMA L2-20 · NEMA L5-15 · NEMA L5-30 · NEMA L6-20 · NEMA L6-30 · NEMA 1-15 · NEMA 5-20 · NEMA 6-20 · NEMA 7-15

Rated for higher work loads than most extension cords, these easy-to-see round yellow cords are for indoor and outdoor use and are also great for use with generators. UL listed.

Turn-lock cords prevent accidental disconnection.

Medium duty cords have a PVC plug and connector. Temperature range is –4° to +140° F. ***Heavy duty cords*** have a heavy duty rubber plug and connector with high abrasion, ozone, oil, and impact resistance. Temperature range is –13° to +199° F.

Flat-Plug Indoor Extension Cords

NEMA 1-15 · NEMA 5-15

A thin, angled profile means you can keep furniture close to walls while reducing strain on the plug. Plus, they won't block the other outlet. Designed for light duty indoor use, they have a flat cord with a PVC jacket (SPT-2). Rated 13 amps @ 125 VAC and 1625 watts. Temperature range is –4° to +140° F. UL listed.

Fire-Guard Indoor Extension Cords

Light Duty Cord

Heavy Duty Cord

NEMA 1-15 · NEMA 5-15

"Smart" cords continually monitor their insulation to detect current leakage caused by damaged or worn insulation, and then shut off power before a fire can begin. They are flat with a PVC jacket (SVT). Cords require manual resetting after tripping. UL listed and CSA certified.

Light duty cord is 16/2 AWG and rated @ 120 VAC. It has a two-prong (NEMA 1-15) plug and three-outlet (NEMA 1-15) connector. Color is white. Rated for indoor use at room temperature.

Heavy duty has a ground fault circuit interrupter (GFCI) for shock protection. Cord is 14/3 AWG and rated @ 120 VAC. It has a three-prong (NEMA 5-15) plug and connector. Color is yellow. Use indoors and outdoors. Temperature range is –31° to +150° F.

	Rating Amps	Rating Watts	Cord Size	Lg., ft.		Each
Light Duty	13	1560	0.16″×0.31″	8	71265K41	$20.59

Self-Retracting Extension Cords

Cord Type SJEOW with Belt Clip

NEMA 5-15

These tangle-resistant, self-coiling extension cords never need winding. They stretch to allow easier movement without having loose cord in the way. Cords have a right-angle, three-prong (NEMA 5-15) plug that prevents accidental pull-out (except the SJEO cord which has a straight NEMA 5-15 plug). All have a three-prong (NEMA 5-15) connector and are 16/3 AWG. Rated 13 amps @ 125 VAC and 1625 watts. UL listed.

SJEO cord has an orange TPE jacket and a temperature range of –58° to +221° F. For indoor use. CSA certified. ***SJEOW*** cords have a black thermoplastic rubber jacket and a temperature range of –67° to +195° F. For indoor and outdoor use. OSHA compliant. 1448K22 includes a belt clip to keep the cord out of the way when using power tools. ***SJT*** cord has an orange PVC jacket and a temperature range of –40° to +140° F. For indoor use. OSHA compliant.

Cord Type	Length, ft. Retracted	Length, ft. Extended	Cord OD	Coil OD		Each

For information about NEMA plugs and receptacles, see pgs. 784 and 787. For information about AWG, see pg. 800.
For information about cord type, see page 804.

Temporary Power Distribution Boxes

This rugged equipment is designed for safe, temporary power distribution (not power generation) in areas such as construction sites. For indoor and outdoor use.

Power Boxes— Have a 50-amp California Standard power inlet that distributes power to seven receptacles and a 50-amp California Standard power outlet for stringing additional boxes to the system. UL listed. Meet OSHA requirements. Steel boxes have a rust-resistant yellow finish.

Accessories— Use the *power inlet cords* to bring power to boxes. They're Type SOW rubber cord with a 50-amp California Standard turn-lock plug on one end and connector on the other. *Replacement plug* connects with the power box outlet. *Replacement connector* connects with the power box inlet. Both are 50 amp @ 125/250 VAC, California Standard turn-lock style.

Portable Rubber Outlet Boxes

NEMA 5-15

Standard Box with Outlets

Box without Outlets, with Outlet Covers

Great wherever you use portable power in indoor environments. Made of rubber that's oil, impact, chemical, and scratch resistant. Each box has a nylon strain-relief fitting at the cord entrance to protect the internal wire connections. Color is yellow. Outlet boxes are 3⅜″ deep and rated 15 amps @ 120 VAC and 1800 watts. Temperature range is –13° to +199° F. UL listed and CSA certified.

Standard boxes accept 0.33″ to 0.66″ OD cord. Boxes ***with outlet covers*** have a spring-loaded flip cover over each outlet (outlet hole for those without outlets) for added dust and moisture protection. They accept 0.31″ to 0.63″ OD cord.

Boxes with Outlets— Have four outlets (one duplex receptacle on two sides of the box). ***Boxes without Outlets—*** Build your own outlet box or replace an existing damaged box with these empty boxes. They accept one standard size duplex receptacle on two sides of the box. Interior box size is 2.63″ Ht. × 1.75″ Wd. × 3″ Dp.

Concealed-Cord Outlet Boxes

NEMA 5-15

Protect yourself from trip hazards and your cord from damage. Position the lay-flat PVC duct between a wall outlet and wherever you need power. Ducts have a 16/3 AWG Type SPT-2 flat cord with a three-prong (NEMA 5-15) plug that extends two feet beyond one end of the duct. There's a duplex three-prong (NEMA 5-15) outlet on the other end. Install ducts using 2″ Wd. × 10′ Lg. tape with adhesive on both sides (sold separately below). Outlet boxes are rated 13 amps @ 125 VAC. Box size is 4.5″ Lg. × 2.75″ Wd. × 1″ Ht. Temperature range is 0° to 150° F. For indoor use only. UL listed.

Cabinet-Mount Outlet Strips

NEMA 5-15

NEMA 5-20

Mount these strips directly on your cabinet frame. Just screw the clips to any cabinet and snap strips into place. Mounting clips included. Strips have a resettable circuit breaker and aluminum housing with a gray finish. Rated @120 VAC. Size is 1½″ Wd. × 1³⁄₁₆″ Dp. Temperature range is 32° to 150° F. UL listed.

15-amp outlet strips have a 14/3 AWG Type SJT cord with three-prong (NEMA 5-15) plug and outlets.

20-amp outlet strips have a 12/3 AWG Type SJT cord with a NEMA 5-20 plug and outlets.

Extension Cord Holders

Keep your cord neatly coiled and ready to use with these holders. They accommodate 150 ft. of 16/3 AWG cord; 100 ft. of 14/3 AWG cord; or 50 ft. of 12/3 AWG cord. 7046K7 is made of polypropylene. 7046K8 is made of polyethylene and has a carrying handle and snap-on stand.

Ht. × Wd.	Color		Each
4¼″ × 18¼″	Orange	7046K7	$2.01
11¾″ × 11¾″	Yellow	7046K8	7.76

For information about cord type, see page 808. For surge suppressor outlet strips, see page 928.

Outlet Strips

Out of outlets? These strips have a resettable circuit breaker and most have an illuminated master on/off switch (see table). All have Type SJT cords and include mounting clips. Rated @ 120 VAC. Temperature range is 32° to 150° F, unless noted. UL and C-UL listed.

15-amp outlet strips have a 14/3 AWG cord with a molded three-prong NEMA 5-15 plug and outlets. ***20-amp outlet strips*** have a 12/3 AWG cord with a molded three-prong NEMA 5-20 plug and outlets, except 71515K17 and K18, which have two NEMA 5-20 and 22 NEMA 5-15 outlets. ***30-amp outlet strips*** have a 10/3 AWG cord with a NEMA L5-30 turn-lock plug and outlets.

90° angle outlet strips have outlets that are rotated 90° to accommodate plug-in transformers and power supplies.

Hospital-grade outlet strips are for noncritical hospital applications and are more durable than other outlet strips. Each has hospital-grade receptacles and a plug (with a green dot for identification).

Replacement mounting clips are only for use with 2″ wide strips.

Rotating Outlet Adapter

Never let oddly shaped plugs stop you from using your outlets again. Adapter plugs into a three-prong NEMA 5-15 outlet, and has four three-prong NEMA 5-15 outlets that rotate up to 360°. Each outlet automatically holds the position when you stop turning. Made of white ABS plastic and is 4 3/16″ Ht.×3 15/32″ Wd.×1 3/32″ Dp. Rated 15 amps @ 120 VAC and 1,800 watts. For indoor use. UL listed.

5576K2 ..... $14.38

For information about cord type, see page 808. For surge suppressor outlet strips, see page 928.

Rack-Mount Outlet Strips

Designed to fit standard 19″ wide electronics racks, enclosures, and cabinets, these strips have front outlets for easy access to external components and rear outlets for components inside your cabinet. Most have an illuminated on/off switch (see table). All have a resettable circuit breaker. Rated @ 120 VAC. All units are black steel and 1¾″ Ht. × 19″ Wd. × 2¾″ Dp., unless noted.

15-amp outlet strips have a 14/3 AWG Type SJT cord with a three-prong NEMA 5-15 plug and outlets. They have four ¼″ dia. mounting holes (fasteners not included, unless noted). Temperature range is 32° to 150° F, unless noted. UL and C-UL recognized. 90° *angle outlet strips* have outlets that are rotated 90° to accommodate plug-in transformers and power supplies. *Hospital-grade outlet strips* are for noncritical hospital applications and have hospital-grade receptacles and plug (with a green dot for identification).

20-amp outlet strips have a 12/3 AWG Type SJT cord with a NEMA 5-20 plug and outlets. They have four ¼″ dia. mounting holes (fasteners not included). Temp. range is 32° to 150° F. UL and C-UL recognized. *Strip with amp meter* displays the total power your devices are using.

24-amp outlet strip has a 10/3 AWG Type SJT cord with a NEMA L5-30 locking plug. It has two circuits and each circuit has a 12-amp thermal breaker and six NEMA 5-20 outlets (two in front and four in rear). Has a green LED power indicator and two 0.110″ and two 0.156″ dia. mounting holes (fasteners not included). Temperature range is 23° to 113° F. UL and C-UL recognized.

32-amp outlet strip has two circuits and each circuit has a 16-amp thermal breaker, a 12/3 AWG Type SJT cord with a NEMA 5-20 plug, and six NEMA 5-20 outlets (two in front and four in rear). Receptacles are each rated 16 amps. Has a green LED power indicator and two 0.110″ and two 0.156″ dia. mounting holes (fasteners not included). Temperature range is 23° to 113° F. UL and C-UL listed.

Permanent-Mount Hardwired Outlet Strip System

Configure your own outlet system to bring convenient, permanent access to electrically busy areas. Outlet strips and accessories are UL and C-UL listed.

Outlet Strips

Mount these outlet strips by hardwiring them into your existing electrical system. Strips have NEMA 5-15 outlets with 12 AWG insulated solid wire. Strips have knockouts in the back for ½″ trade size conduit and cable connectors. They include two end caps for a finished look. All measure 1⁹⁄₃₂″ Wd. × ¾″ Dp. Temperature range is 32° to 150° F. Rated 15 amps @ 125 VAC.

To Order: For steel outlet strips, please specify color: black, ivory, or white, unless noted.

Accessories

To Order: For steel accessories, please specify color: black, ivory, or white, unless noted.

(A) *Blank end fitting* covers the end of an outlet strip.
(B) *Wall plate adapter* lets you feed power to outlet strips from an existing wall outlet.
(C) *Cover clip* conceals joints between outlet strips.
(D) *Internal elbow* joins outlet strips that meet at an inside corner.
(E) *Tee* allows branching at right angles.
(F) *External elbow* joins outlet strips that meet at an outside corner.
(G) *Flat elbow* permits right angle turns on the same surface.
(H) *Entrance end fitting* mounts to an existing electrical box, adapting outlet strips to an existing power circuit.
(J) *Blank channel* (no wires inside) is used to connect outlet strips. Furnished in a 5-ft. length that you can cut to the length you need.
Mounting clip provides support at any point along an outlet strip.

Receptacle Outlet Caps

Protect your unused outlets from dust and contaminants with these round yellow ABS plastic caps. They fit standard two- and three-prong straight-blade receptacles (NEMA 1-15, 5-15, and 5-20). Sold in packages of 12.

9534T1 ..... Per Pkg. $5.79

For information about NEMA plugs and receptacles, see pages 784 and 787.
For information about cord type, see page 808.

Light Duty Manual-Rewind Reels

Load your extension cords (not included) on these reels and carry them to the worksite with you. Reels keep cords secure and tangle free. All have a carrying handle and hand-crank knob. Reels are high-impact yellow polystyrene.

Medium Duty Manual-Rewind Reel with Outlets

For strength and simplicity, choose this yellow steel reel. It has four NEMA 5-20 outlets and can lay on its side if that's more convenient for you. It has a 15-amp resettable circuit breaker, carrying handle, and power indicator. An adjustable brake allows you to control tension during unwinding or stop the cord from unwinding once you have it at the desired length. Connect it to your power source using the attached 6″ long 12/3 AWG Type SJTW power cord with a three-prong (NEMA 5-15) plug rated 15 amps @ 125 VAC. UL listed.

Light Duty Plug-In Spring-Rewind Reels

NEMA 5-15

Single Outlet

Three Outlet

Three Outlet with Circuit Breaker

Reliable performance at an economical price. Reels have molded power connections, an adjustable ball stop, and a cord-locking ratchet that holds the cord at any length, releasing it easily for take-up. Case is made of light-gauge steel. Units mount just about anywhere using the included swivel eye hook, mounting bracket, and hardware. Reels are 9½″ Lg.×3″ Wd.×11¼″ Ht. They come with a 30-ft. long black Type SJT cord on the outlet side and a 24″ long power cord. All have three-prong (NEMA 5-15) plugs and outlets. UL listed and meet OSHA requirements for general use.

Single-outlet and ***three-outlet reels*** have a white powder-coated finish. ***Three-outlet reels with circuit breaker*** have a resettable circuit breaker and a yellow powder-coated finish.

Medium Duty Plug-In Spring-Rewind Reels

NEMA 5-15

More rugged than our light duty reels, these reels are made of high-impact black thermoplastic. They have three three-prong (NEMA 5-15) outlets protected by a resettable circuit breaker and a three-prong (NEMA 5-15) plug. A cord-locking ratchet holds the cord at any length, releasing it easily for take-up. A quick-release bracket and carrying handle give you multiple mounting options. Base is 9¼″ Lg.×3″ Wd. with three ⅜″ dia. mounting holes (hardware included). They come with a yellow Type SJTW cord. Size is 11½″ Lg.×4½″ Wd.×15¼″ Ht. UL and C-UL listed.

Swing Mount w/Four Outlets

Made of heavy-gauge steel, these reels have an adjustable ball stop, a slip ring with nylon bearings that never need lubricating, an adjustable cord tension mechanism, and automatic take-up that maintains constant tension on the cord. They come with a 6-ft. power cord to connect to your power source. Color is yellow with a powder-coated finish. Reels are rated NEMA 2 for protection against falling liquid and light splashing. Cord is black. Base is 5½″ Lg.×4½″ Wd. and has three ⅜″ Wd. mounting slots (fasteners not included). UL listed and CSA certified.

Overall size of ***rigid-mount reels*** is 12″ Lg.×7¾″ Wd.×13 13/16″ Ht.; for ***swing-mount reels*** it's 12″ Lg.×7¾″ Wd.×17 11/16″ Ht.

For information about cord type, see page 808.

Heavy Duty Plug-In Controlled-Rewind Reels

A slower, controlled rewind system prevents cord-whipping action and reduces slamming of reel parts that can occur at the end of recoiling. An eight-position ratchet holds the cord at desired length; a quick pull retracts the cord at a rate of 5 ft. per second. Reels are made of steel with a blue powder-coated finish. They have an adjustable rubber cord stop and an adjustable arm guide for easy mounting to walls, floors, ceilings, and vehicles. They come with a Type SJO cord on the outlet side and a 5-ft. long Type SJO power cord. Plugs and outlet are NEMA 5-20.

Base has two 1/2″ dia. mounting holes and two 1/2″ wide mounting slots (fasteners not included). ***Reels with 50-ft. long cord*** have a 5″ Lg. × 6″ Wd. base and are UL listed. ***Reels with 100-ft. long cord*** have a 6″ Lg. × 6″ Wd. base.

Extra-Heavy-Duty Hardwired Reels

At the heart of these steel reels is a direct-drive, lifetime-lubricated spring that provides reliable operation and long life. Reels are ratcheted, so cord is held at the length you need … a quick pull on the cord releases the ratchet and retracts the cord. Or, flip a switch to disengage the ratchet and use the automatic takeup feature to maintain constant tension on the cord. Reels include a low-friction, four-roller guide for better winding. Base is 9¼″ Lg. × 4½″ Wd. and has seven 7/16″ dia. mounting holes for floor, wall, and ceiling mounting (fasteners not included).

Standard reels are rated 35 amps @ 600 VAC. The slip ring is enclosed in a gasketed dust- and water-tight NEMA 4X enclosure and has screw terminals for connection to your power source. Cord stops are sold separately below. All have a rust-resistant yellow powder-coated finish. Size is 13½″ Lg. × 14½″ Wd. × 15″ Ht. Reels *with Type SOW* cord are UL and C-UL listed, unless noted. Reels *without cord* have slip rings designed for two or three power conductors.

Hazardous-location reels are rated 30 amps @ 600 VAC. They comply with Class I, Div. I, Groups C and D and Class II, Groups E, F, and G hazardous locations as defined by NEC, and NEMA 4 and NEMA 9 standards. A threaded junction box permits easy connection to sealed lead wires. Come with Type SOW cord and cord stop. All have a gray epoxy-coated finish. Size is 15″ Lg. × 24″ Wd. × 15″ Ht. UL and C-UL listed.

Swivel base (sold separately below) permits 345° rotation.

Cord Stop for 16- and 14-AWG Cord	7353K71	Each	23.43

♠ Applies only to reels sold with Type SOW cord. ■ Not UL listed or C-UL listed. ▲ Cord length is 60 ft.

Battery Cable

A colored stripe along the cable indicates its size, based on SAE standards.

Standard cable is pure copper with PVC insulation. Temperature range is –40° to +194° F. ***High-flex*** cable, also known as welding cable, has finer strands for greater flexibility. It's pure copper cable with synthetic rubber insulation. Temperature range is –58° to +221° F.

Maximum continuous length is 25 ft. **To Order:** Please specify cable color: black or red.

★ Amp rating is the max. value for a single conductor at a room temperature of 86° F. Amp rating decreases as room temperature increases, if multiple conductors are bundled together, or if conductors are inserted into conduit. ♣ Refers to gauge size only, not number of conductors.

About AWG

AWG stands for American Wire Gauge. It designates the diameter of the electrical conductor. For actual diameter, see About Wire Size (AWG) on page 758. For a multiconductor cable or cord, it also designates the number of electrical conductors. For example, 16/3 indicates a cord has three 16-gauge conductors. Cable and cord do not have a separate ground conductor, except where noted.

Wire

Stranded Wire

Solid Wire

Use this single-conductor PVC-insulated tinned-copper wire, also known as hook-up wire, for product assembly, internal wiring of electrical equipment, and wiring control circuitry. Passes UL VW-1 vertical flame test. UL recognized and CSA certified.

Stranded wire is more flexible, but tends not to hold its shape. Solid wire is more rigid, easier to terminate, and holds its shape well.

Standard— Good for general applications. Temperature range is –40° to +221° F. **To Order:** Please specify length (25, 50, 100, 200, or max. continuous length of 500 ft.) and color (black, blue, brown, gray, green, green/yellow, orange, purple, red, white, or yellow).

Harsh Environment— Has irradiated insulation, resulting in better resistance to chemicals, abrasion, and cuts. ***150 VAC (UL 1429)*** has a temperature range of –67° to +176° F and meets Mil. Spec. MIL-W-16878/1-Type B. **To Order:** Please specify length (25, 50, 100, 200, or max. continuous length of 500 ft.) and color (black, blue, green, orange, red, white, or yellow). ***600 VAC (UL 1431)*** has a temperature range of –40° to +221° F. **To Order:** Please specify length (25, 50, 100, 200, or max. continuous length of 500 ft.) and color (black or white).

Wire Assortments

Get the most popular hook-up wire sizes in these portable assortments. Wire is tinned copper with PVC insulation. Temperature range is –40° to +176° F, unless noted. Spools are plastic. Racks are freestanding, or use the two ¼″ dia. mounting holes for wall mounting (hardware not included).

Solid wire assortments pass UL VW-1 vertical flame test and meet UL 1007/1569. UL recognized and CSA certified.

Also Available: Replacement spools of wire. Please ask for 6808K88 and specify assortment part number and color.

♦ Temperature range is –58° to +221° F. Passes UL VW-1 vertical flame test.

392° F Chemical-Resistant Wire

Able to take the heat—all the way to 392° F. Also known as hook-up wire, it's abrasion, solder-iron, and oil resistant. Has a silver-plated, stranded copper conductor with PTFE insulation. Temperature range is –67° to +392° F. Meets MIL-W-16878/4 and passes UL VW-1 vertical flame test.

To Order: Please specify length (10, 25, 50, or max. continuous length of 100 ft.) and color (black, green, red, or white).

North American/European Approved Wire

Designed to meet European requirements, this single-conductor hook-up wire can also be used on North American electronic and electrical equipment. Made of stranded, tinned copper with PVC insulation. Temperature range is –40° to +221° F. Wire conforms to European Harmonization document HD-21 and is UL recognized, CSA certified, and CE approved.

To Order: Please specify length (10, 20, 50, 100, or max. continuous length of 500 ft.) and color (black, blue, or green/yellow).

UL 1015; HAR H07V-K meets NEC Type MTW requirements for use in machine tool wiring.

★Amp rating is the max. value for a single conductor at a room temperature of 86° F. Amp rating decreases as room temperature increases, if multiple conductors are bundled, or if conductors are inserted into conduit.

For information about AWG, see page 800.

Building Wire (THHN)

Stranded Wire

Ideal for use in conduit and cable trays for feeders and branch circuits in commercial and industrial buildings. This rugged single-conductor wire resists abrasion, water, oil, and gasoline, meeting NEC Type THHN requirements for use in damp and dry locations. Conductor is PVC insulated copper with a nylon jacket. Temperature range is –13° to +194° F. Passes UL VW-1 vertical flame test, unless noted. UL listed.

Stranded wire is more flexible, but tends not to hold its shape. ***Solid wire*** is more rigid, easier to terminate, and holds its shape well.

To Order: Please specify length (10, 25, 50, 100, 250, or full spool length of 500 ft.) and color (black, blue, brown, gray, green, orange, red, white, or yellow).

■ Does not pass UL VW-1 vertical flame test.

Machine Tool Wire (MTW)

This stranded single-conductor wire offers flexibility while meeting NEC Type MTW requirements for use in machine tool wiring. Wire is copper, PVC insulated, and resists oil and coolant. Temperature range is –4° to +194° F. Passes UL VW-1 vertical flame test. UL listed and CSA certified, unless noted.

To Order: Please specify length (10, 25, 50, 100, 250, or full spool length of 500 ft.) and color (black, blue, brown, green, orange, red, white, or yellow, unless noted).

✓ Not available in yellow, orange, or brown. Blue is UL and C-UL listed. Not CSA certified.

Magnet Wire

Great for use in motors, transformers, relays, and other high-speed winding applications. Wire has a single conductor and is made of solid copper. An enamel coating resists moisture and heat, so it can be used in hermetic motors. Maximum temperature is 392° F. Meets NEMA 1000 MW-73C and MW-35C. UL recognized.

Wire OD: 36 AWG is 0.006″, 34 AWG is 0.008″, 32 AWG is 0.010″, 30 AWG is 0.012″, 28 AWG is 0.014″, 26 AWG is 0.018″, 24 AWG is 0.022″, 22 AWG is 0.028″, 20 AWG is 0.035″, 18 AWG is 0.043″, 16 AWG is 0.054″, 14 AWG is 0.068″, and 12 AWG is 0.084″.

Easy-Install Bundled Building Wire

Straight

You don't comb one hair at a time—why install one wire at a time? These conductors are bundled together and bound with nylon, making installation quicker. Plus, they're numbered every 1½″ for quick identification. Each conductor is made of NEC Type THHN/THWN stranded copper wire with PVC insulation. Outer layer is marked each foot for accurate measurements. Color is red. Temperature range is 14° to 194° F. UL listed. Maximum continuous length is 100 ft.

Straight bundles can be installed in cable trays where no pulling is required. Ideal when you may need to access individual conductors along the length of the bundle. ***Spiral*** bundles are good for runs when the bundle is pulled through conduit and won't be accessed along its length. Bundle keeps its round shape even when bent.

AWG	OD	Amps★	VAC	*Straight*	Per Ft.●	*Spiral*	Per Ft.●

● Prices are approximately 15% lower when you buy in maximum continuous lengths of 100 ft.

Fixture Wire (TFFN)

For use in lighting fixtures and other enclosed and protected equipment, this stranded single-conductor NEC Type TFFN wire is also great for connecting fixtures to power circuits. Wire resists heat, water, oil, and gasoline. It has a copper conductor with PVC insulation and a nylon jacket. Temperature range is 14° to 194° F. UL listed.

To Order: Please specify length (50, 100, 250, or full spool length of 500 ft.) and color (black, blue, brown, green, orange, red, or white).

Continuous-Flex Wire

Perfect for continuous flexing applications such as robotics and automation. Wire has a single stranded copper conductor with black PVC insulation and an oil-resistant, flame-retardant black PVC jacket (passes UL VW-1 vertical flame test). Temperature range is 41° to 194° F. UL recognized, CSA certified, and CE approved. Maximum continuous length is 100 ft.

Continuous-Flex Miniature Wire

Ideal for use in thermostats, electronic applications, circuitry control, and wherever continuous flexing is required, this small-gauge, single-conductor hook-up wire is very limp and flexible. It resists acids, oils, and solvents, and has a stranded copper conductor covered with a PVC insulation that minimizes kinking and fatigue. Temperature range is –40° to +176° F. Passes UL VW-1 vertical flame test. UL recognized for applications up to 150 VAC, unless noted.

To Order: Please specify length (10, 20, 50, or max. continuous length of 100 ft.) and color (black, green, red, or white).

♥ UL recognized for applications up to 30 VAC.

★Amp rating is the max. value for a single conductor at a room temperature of 86° F. Amp rating decreases as room temperature increases, if multiple conductors are bundled, or if conductors are inserted into conduit.

For information about AWG, see page 800.

302° F Wire

With a maximum temperature of 302° F, this silicone rubber-insulated single-conductor wire withstands high heat while maintaining greater flexibility than PVC, PTFE, and braided wire. Also known as hook-up wire and appliance and fixture wire, it's perfect for stoves, dryers, and motors. Conductor is stranded, tinned copper. Temperature range is –40° to +302° F. UL recognized and CSA certified.

To Order: Please specify length (10, 25, 50, 100, 250, or max. continuous length of 500 ft.) and color (black or white).

302° F High-Voltage Wire

For use in high temperature and high voltage applications such as stoves, heaters, furnaces, dryers, and electronic devices. Also called corona-resistant hook-up wire, this single-conductor wire is flame retardant and abrasion resistant. It has a stranded tinned copper conductor with silicone rubber insulation. Color is white. Temperature range is –40° to +302° F. UL recognized. Maximum continuous length is 100 ft.

392° F High-Voltage/High-Flex Wire

Often found in military and aerospace applications, this single-conductor wire is for use in high-temperature applications that require flexible wire. With a temperature range of –85° to +392° F, this wire remains flexible in low-temperature applications, too. Has a high-flex stranded tinned copper conductor with clear silicone rubber insulation. Passes UL 94V0 vertical flame test. Maximum continuous length is 100 ft.

392° F High-Flex Miniature Wire

Strands of silver-plated copper finer than human hair are wound into a single conductor and insulated with FEP for outstanding flexibility—so flexible, it is used in medical implantation devices. With an amazing temperature range of –238° to +392° F, this wire withstands severe, repeated flexing in very high and low temperatures.

To Order: Please specify length (10, 25, or max. continuous length of 50 ft.) and color (black, green, red, or white).

AWG	OD	Amps★	VAC/VDC		Per Ft. 10-49	Per Ft. 50-Up

400° F Ultra-Flex Miniature Wire

Similar to the 392° F High-Flex Miniature Wire, except this wire is insulated with silicone rubber, making it the most flexible wire we offer. Withstands the most severe, repeated flexing in high- and low-temperature environments. Temperature range is –100° to +400° F. Wire has a single stranded corona-resistant copper conductor. Comes in 50-ft. spools.

To Order: Please specify color (black, green, red, or white).

AWG	OD	Amps★	VAC/VDC		Per Spool
36	0.019″	0.6	30	**9511T4**	$17.44

26	0.042″	1.0	30	**9511T6**	16.78

482° F Braided Wire

Resisting temperatures up to 482° F, this single-conductor wire is built for repeated flexing and abuse. Also called hook-up wire and Type TGGT wire, it's moisture resistant and chemically inert. It has a stranded nickel-plated copper conductor with PTFE insulation and a braided fiberglass jacket. Temperature range is –67° to +482° F. Color is tan. UL recognized and CSA certified. Maximum continuous length is 100 ft.

842° F Braided Wire

Great for internal wiring of an oven, this flexible single-conductor wire withstands temperatures up to 842° F. Also called lead wire and Type MG wire, it has a stranded nickel-plated annealed copper conductor with an insulation of glass-reinforced mica tape covered with a braided fiberglass jacket. Temperature range is –40° to +842° F. Color is tan. UL recognized and CSA certified. Maximum continuous length is 100 ft.

AWG	OD	Amps★	VAC/VDC		Per Ft. 1-99	Per Ft. 100-Up

1832° F Braided Wire

For places as hot as Hades, this single-conductor wire provides heavenly thermal and mechanical protection. It's great for use in nonflexing applications where open flames are present, such as ovens, kilns, and furnaces. Has a stranded nickel conductor insulated with reinforced mica tape, braided ceramic fibers, and a braided Type 304 stainless steel outer jacket. Temperature range is –40° to +1832° F. Passes UL VW-1 vertical flame test. Maximum continuous length is 500 ft.

★Amp rating is the max. value for a single conductor at a room temperature of 86° F. Amp rating decreases as room temperature increases, if multiple conductors are bundled, or if conductors are inserted into conduit.

For information about AWG, see page 800.

Flexible Aluminum-Armored Multiconductor Building Cable

Also known as BX, this cable is lightweight and easy to cut. Use cable in dry locations. Conductors are color coded (two-conductor cable is black and white; three-conductor cable is black, red, and white; four-conductor cable is black, blue, red, and white). Temperature range is 14° to 194° F. UL listed.

NEC Type MC with ground has solid Type THHN copper conductors with PVC insulation and a green PVC-insulated grounding wire, wrapped in polyester tape and an aluminum jacket. For use in NEC Class I, Division 2; Class II, Division 2; and Class III, Division 1 and 2 hazardous locations. ***NEC Type AC with ground*** has solid Type THHN copper conductors with PVC insulation and a fibrous covering, an uninsulated aluminum grounding wire, and an aluminum jacket.

To Order: Please specify length (10, 25, 50, 100, or max. continuous length of 250 ft.).

Multiconductor Building Cable

Use without conduit for exposed and concealed wiring applications. Cable has solid Type THHN copper conductors, a separate ground wire, inner PVC insulation, and a PVC jacket. Conductors are color coded (two-conductor cable is black and white; three-conductor cable is black, red, and white). Temperature range is 14° to 194° F. UL listed.

Romex-jacketed cable with ground (NEC Type NM-B) is for use in dry locations. Easily fish through walls, ceilings, and masonry blocks. Ground wire is uninsulated. Meets UL 719. ***Underground feeder cable with ground*** (NEC Type UF-B) resists sunlight, moisture, and fungus, and can be buried. Ground wire is uninsulated. Meets UL 493.

To Order: Please specify length (10, 25, 50, 100, or max. continuous length of 250 ft.).

Flexible Multiconductor Cable

Designed for periodic bending and flexing, such as in hand-held controllers, CNC machines, and other automated and mechanical equipment. Cable has stranded copper conductors with black PVC insulation (black conductors are sequentially numbered with white numbers) and a gray oil-resistant PVC jacket. Cable has a green/yellow ground wire conductor, unless noted. Temperature range is 41° to 194° F for flexing applications and –40° to +194° F for non-flexing applications. Passes UL VW-1 vertical flame test. CSA certified and CE approved. Maximum continuous length is 100 ft. *Note:* The total number of conductors includes the ground wire.

Shielded cable has a tinned copper braid to eliminate electromagnetic interference (EMI).

● Prices are approximately 20% lower when you order the maximum continuous length of 100 ft. ■ Does not have a green/yellow ground wire.

Continuous-Flex and Twist Multiconductor Cable

This cable flexes and twists, so it's ideal for applications such as robotics. Cable is oil and UV resistant and can be used in wet and damp areas. Its finely stranded copper conductors have black TPE insulation with white sequential numbers. There is one green/yellow ground conductor. They are wrapped together in a black polyurethane jacket. Temperature range is –40° to +176° F. UL recognized, CSA certified, and CE approved. Maximum continuous length is 100 ft. *Note:* The total number of conductors includes the ground wire.

14/3	0.41″	25	600	8559K28 7.11	6.03

★Amp rating is the max. value for each conductor (excluding ground) at a room temperature of 86° F. Amp rating decreases as room temperature increases, if multiple cables are bundled, or if inserted into conduit.

For information about AWG, see page 800.

Continuous-Flex Multiconductor Cable

Unshielded

Shielded

The bodybuilder of the wire world, this cable never gets tired of flexing. It has stranded copper conductors and is often used in cable chain and track for robotics, CNC machines, and material handling equipment. It has one green/yellow ground wire, unless noted. CE approved. Maximum continuous length is 100 ft. *Note:* The total number of conductors includes the ground wire.

Shielded cable eliminates electromagnetic interference (EMI).

300-VAC Cable (unless otherwise indicated)

Has black insulated conductors with white sequential numbers. ***Shielded*** cable has tinned copper braided shielding.

Standard— Good for general use; cable withstands periodic exposure to most oils and fluids. It has PVC-insulated conductors surrounded by a green PVC jacket. Temperature range is 23° to 158° F. Passes FT1 vertical flame test. UL recognized and CSA certified.

Oil Resistant— Handles continuous exposure to oil and fluid. It has TPE-insulated conductors surrounded by a gray polyurethane jacket. Temperature range is –31° to +176° F. Passes FT1 vertical flame test. UL and C-UL recognized.

Heavy Duty— Made to last over 17 million high-speed cycles. It's oil, abrasion, and chemical resistant and has TPE-E (thermoplastic elastomer) insulated conductors surrounded by a gray polyurethane jacket. Temperature range is –40° to +194° F.

● Prices are approximately 15% lower when you order the maximum continuous length of 100 ft. ♣ Does not have a ground wire.

600-VAC Cable

This cable is oil resistant. It has red PVC-insulated conductors with white sequential numbers surrounded by a black PVC jacket. Temperature range is 41° to 194° F. Passes UL VW-1 vertical flame test. UL recognized and CSA certified.

Shielded cable has tinned copper braided shielding.

★Amp rating is the max. value for each conductor (excluding ground) at a room temperature of 86° F. Amp rating decreases as room temperature increases, if multiple cables are bundled, or if inserted into conduit.

For information about AWG, see page 800.

Cable-Tray Rated Continuous-Flex Multiconductor Cable

Unshielded

Shielded

Improve versatility and installation time by extending this cable from your cable tray to your machine without the need for conduit. Cable meets UL TC-ER for use in cable trays and is designed for periodic bending and flexing, so it's also good for CNC machines. It has stranded copper conductors with black PVC/nylon insulation (conductors are sequentially numbered with white numbers) and a green/yellow ground wire. Temperature range is 23° to 176° F. UL listed, CSA certified, and CE approved. *Note:* The total number of conductors includes the ground wire.

Unshielded cable has a gray PVC jacket. ***Shielded*** cable has a PVC jacket, a tinned copper braid, and a gray PVC outer jacket.

● Prices are approximately 20% lower when you order the maximum continuous length of 100 ft.

392° F Multiconductor Cable

Use with controls and instrumentation where high-temperature protection is required. The conductors are stranded silver-plated copper with PTFE insulation, a braided silver-plated copper jacket, and a white PTFE outer jacket. Conductors are color coded (1-black, 2-white, 3-red, 4-green). Temperature range is –67° to +392° F. Meets MIL-W-16878/4.

842° F Multiconductor Cable

Great for ovens and furnaces, this high-temperature cable is serious stuff—made to resist moisture, flames, and oils. The conductors are stranded nickel-plated copper wrapped in reinforced mica tape and a braided fiberglass jacket, which has color-coded tracer threads (1-black, 2-red, 3-blue, 4-orange). They are wrapped together in PTFE and reinforced mica tape with a black braided fiberglass jacket. Temperature range is –40° to +842° F. Maximum continuous length is 500 ft.

Flexible Flat Multiconductor Cable

If your cable is too fat to fit, don't try to flatten it—this flat cable tackles tight spaces. Conductors are stranded copper. Maximum continuous length is 500 ft. For connectors, see page 1473.

Cable has a yellow PVC jacket and is oil and UV resistant. Temperature range is –31° to +221° F. UL listed and CSA certified.

Heavy Duty Multiconductor Cable

Unshielded

Get twice the tensile strength and three times the abrasion resistance of PVC-jacketed cable. The black, durable polyurethane jacket resists oils, fuels, solvents, and water, and is easily stripped away with the nylon rip cord. Conductors are made of stranded tinned copper with PVC insulation. Temperature range is –4° to +194° F. Passes UL VW-1 vertical flame test. CSA certified and CE approved. Maximum continuous length is 500 ft.

Unshielded cable has color-coded insulation (1-black, 2-red, 3-white, 4-green, 5-brown, 6-blue, 7-orange, 8-yellow, 9-purple, 10-gray, 11-pink, 12-tan, 13-red/green, 14-red/yellow, 15-red/black). ***Shielded*** cable protects against electromagnetic interference (EMI). It has color-coded insulation (1-black, 2-brown, 3-red, 4-orange, 5-yellow, 6-green) surrounded by an aluminum/polyester shielding.

Floating Multiconductor Cable

A foam coat keeps this flexible cable afloat. Abrasion resistant and UV stable, it stands up to tough environments and is great for underwater equipment. It has stranded copper conductors with color-coded PVC insulation (1-black, 2-white, 3-red, 4-green), a TPE jacket, and a blue foam TPE outer jacket. Temperature range is –11° to +221° F. UL recognized. Maximum continuous length is 100 ft.

★Amp rating is the max. value for each conductor (excluding ground) at a room temperature of 86° F. Amp rating decreases as room temperature increases, if multiple cables are bundled, or if inserted into conduit.

For information about AWG, see page 800.

392° F High-Voltage/High-Flex Flat Multiconductor Cable

Use this flat cable in any high-voltage, high-temperature application that requires flexibility. With a temperature range of –85° to +392° F, it remains flexible in low-temperature applications, too. Has high-flex stranded tinned copper conductors with clear silicone rubber insulation. Passes UL 94V0 vertical flame test. Maximum continuous length is 100 ft.

♦ Prices are approximately 20% lower when you order the maximum continuous length of 100 ft.

Harsh Environment Flat Multiconductor Cable

Ideal for use in wet environments, this flat cable has stranded copper conductors that are annealed for corrosion resistance. Conductors have color-coded PVC insulation (black, green, and white) wrapped in a flame-retardant, white PVC jacket. Temperature range is –13° to +221° F for dry environments and –13° to +167° F for wet environments. Passes UL VW-1 vertical flame test and meets UL 1426 for boat cable.

To Order: Please specify length (10, 25, 50, 100, 250, or max. continuous length of 500 ft.).

AWG	Wd. × Thick.	Amps★	VAC		Per Ft. 10-99	Per Ft. 100-Up

Irrigation Cable

Great for underground sprinkler systems and other direct-burial applications. Conductors are solid copper, have color-coded polypropylene insulation (1-red, 2-white, 3-green, 4-blue, 5-yellow, 6-brown, 7-orange, 8-black, 9-pink), and are surrounded by a black PVC jacket. Temperature range is –4° to +140° F. UL listed.

To Order: Please specify length (10, 25, 50, 100, 250, or max. continuous length of 500 ft.).

Drop-Down Multiconductor Cable

Wire equipment and tools from overhead. Also called bus drop cable, it can be used in a wet environment and resists abrasion, oils, lubricants, acids, alkalies, and ozone. Cable has stranded copper conductors that are annealed to prevent brittleness and corrosion and have color-coded PVC insulation (black, red, and white). The conductors, together with three uninsulated copper ground wires, are surrounded by polypropylene insulation and a gray PVC jacket. Temperature range is –4° to +140° F. UL listed. Maximum continuous length is 250 ft.

Multiconductor Cable with Built-In Strain Relief

Galvanized steel strain cables are attached to this cable to reduce stress and damage, making it great for overhead equipment and tools, such as pendant switches. Use indoors and out. Conductors are stranded copper, have color-coded PVC insulation, and are surrounded by a yellow PVC jacket (Type STOW). Temperature range is 14° to 221° F. UL listed and CSA certified. Maximum continuous length is 100 ft.

Use the ***strain relief connection kit*** (includes two eyebolts, three cable clamps, two cable ties, four hex nuts, and four washers) to secure the cable to your equipment.

Strain Relief Connection Kit ..... 7741K2 **Each** $8.87

Harsh Environment Multiconductor Cable

Unarmored

Whether it's an offshore drilling rig or just seems like one, a work site with extreme environmental conditions and high current and voltage requires a tough cable. This one has flexible, stranded annealed tinned copper conductors, color-coded polyolefin insulation (1-black, 2-red, 3-white, 4-green), and a heavy duty black chlorinated polyethylene jacket. Temperature range is –40° to +230° F. UL listed and CSA certified. Maximum continuous length is 100 ft.

Armored and sheathed cable has bronze armor surrounded by a chlorinated polyethylene outer jacket that's flame retardant and resists abrasion.

★ Amp rating is the maximum value for each conductor at a room temperature of 86° F. Amp rating decreases as room temperature increases, if multiple cables are bundled, or if inserted into conduit.

Speaker Cable

Keep your plant running and your stereo pumping with this cable, also called parallel zip wire. It's great for low voltage applications and it doesn't have an outer jacket, so the two conductors can be pulled apart easily. Conductors are stranded copper, one of which is marked for polarity. Temperature range is –4° to +140° F. ETL listed.

70405K33 and *K34* have white PVC insulation. They meet NEC Article 725 and 800, Type CMR/CL2R/CL3R for use in vertical shafts and risers.

70405K85, *K86*, and *K87* have clear PVC insulation. They meet NEC Article 725, Type CL2 for general purpose use.

To Order: Please specify length (10, 25, 50, 100, or max. continuous length of 250 ft.).

Ultra-Thin Speaker Cable

Terminal Block (Two Included)

So thin you can paint over it, this white adhesive-backed cable is perfect for running audio or other low-voltage signals along the wall or under flooring. Use indoors and out. Insert the ends of the cable into the two included screw terminal blocks or solder the connections. Conductors are solid copper with mylar insulation. Temp. range is -70° to +180° F.

Fire Alarm Cable

Great for critical control circuits in fire alarm systems, horns, smoke detectors, and fire panels. Conductors are solid copper, have color-coded PVC insulation (1-black, 2-red, 3-green, 4-yellow), and are surrounded by a red PVC jacket, unless noted. ETL listed, except 72195K64, which is UL listed. 72195K63 and *K66* have a foil shield to protect signals from interference.

Plenum cable is approved for use without conduit in duct work and above a drop ceiling. Temperature range is –4° to +167° F. Meets NEC Article 760, Type FPLP. ***Nonplenum cable*** has a temperature range of –4° to +140° F. Meets NEC Article 760, Type FPLR for use in risers.

To Order: Please specify length (10, 25, 50, 100, or max. continuous length of 250 ft.).

♠ Flat cable.

● Does not have a jacket (both conductors have red insulation).

Audio Cable

Use this cable in low-voltage, nonshielded applications such as intercom, security, and other communication systems. Conductors are stranded copper with color-coded insulation (1-black, 2-red, 3-white, 4-green, 5-brown, 6-blue, 7-orange, 8-yellow, 9-purple, 10-gray, 11-pink, 12-tan). ETL listed.

Plenum cable is approved for use without conduit in duct work and above a drop ceiling. Conductors have PVC insulation surrounded by an off-white PVC jacket. Temperature range is –4° to +167° F. Meets NEC Article 725 and 800, Type CMP/CL3P. ***Nonplenum cable*** has polypropylene-insulated conductors surrounded by a gray PVC jacket. Temperature range is –4° to +140° F. Meets NEC Article 725 and 800, Type CMR/CL3R for use in vertical shafts and risers, unless noted.

To Order: Please specify length (10, 25, 50, 100, 250, or max. continuous length of 1000 ft.).

AWG	OD	VAC	Plenum Cable	Per Ft. 10-249	Per Ft. 250-Up	Nonplenum Cable	Per Ft. 10-249	Per Ft. 250-Up

■ Meets NEC Article 725 and 800, Type CM/CL2 for general purpose use (not in risers or vertical shafts).

Interference-Reducing Audio Cable

With a sound so sweet and static-free, you won't want to tune out the music and PA announcements in your workplace. This cable has 100% foil shielding and a drain ground wire. Conductors are stranded copper, have color-coded insulation (1-black, 2-white, 3-red, 4-green, unless noted), and are surrounded by a PVC jacket. ETL listed.

Plenum cable is approved for use without conduit in duct work and above a drop ceiling. Has an off-white PVC jacket. Temperature range is –4° to +167° F. Meets NEC Article 725 and 800, Type CMP/CL3P. ***Nonplenum cable*** has a gray PVC jacket. Temperature range is –4° to +140° F. Meets NEC Article 725 and 800, Type CMR/CL3R for use in vertical shafts and risers.

To Order: Please specify length (10, 25, 50, 100, or max. continuous length of 250 ft.).

AWG	OD	VAC/VDC	Plenum Cable	Per Ft. 10-249	Per Ft. 250-Up	Nonplenum Cable	Per Ft. 10-249	Per Ft. 250-Up

▲ Insulation is black and red.

Thermostat Cable

Perfect for low-voltage applications such as thermostat controls, heating units, and security systems. Conductors are solid copper, have color-coded polypropylene insulation (1-red, 2-white, 3-green, 4-blue, 5-yellow, 6-brown, 7-orange, 8-black), and are surrounded by a brown flame-retardant PVC jacket. Temperature range is –4° to +140° F. Meets NEC Article 725, Type CL2 for general purpose use. ETL listed.

To Order: Please specify length (10, 25, 50, 100, or max. continuous length of 250 ft.).

For information about AWG, see page 800.

About Cord

Listed below are designations (cord type) for cord characteristics based on Underwriters Laboratories (UL) and National Electrical Code (NEC) Article 400. *Note:* Until recently, an outdoor cord was designated with the letters "W-A" at the end of the cord type. To standardize cord type between the United States and Canada, UL has dropped the "-A" from these designations.

S = Standard; rated at 600 VAC.
SJ = Junior; rated at 300 VAC.
E = Elastomer (thermoplastic rubber).
T = Thermoplastic.
O = Oil-resistant outer jacket.
OO = Oil-resistant insulation and outer jacket.
P = Parallel construction (flat).
W = Approved for outdoor use.
V = Lightweight, round vacuum cleaner cord.

Cord Type	Jacket	Voltage Rating	Duty
SO	Thermoset Rubber	600	Heavy
SOW	Thermoset Rubber	600	Heavy
SOOW	Thermoset Rubber	600	Heavy
SEOW	Elastomer	600	Heavy
SEOOW	Elastomer	600	Heavy
ST	Thermoplastic	600	Heavy
STO	Thermoplastic	600	Heavy
STOOW	Thermoplastic	600	Heavy
STW	Thermoplastic	600	Heavy
SJEW	Elastomer	300	Medium
SJO	Thermoset Rubber	300	Medium

Cord Type	Jacket	Voltage Rating	Duty
SJOW	Thermoset Rubber	300	Medium
SJOOW	Thermoset Rubber	300	Medium
SJEO	Elastomer	300	Medium
SJEOW	Elastomer	300	Medium
SJEOOW	Elastomer	300	Medium
SJT	Thermoplastic	300	Medium
SJTO	Thermoplastic	300	Medium

SVT	Thermoplastic	300	Light
SPT	Thermoplastic	300	Light

Retracting Cords

These tangle-resistant black cords coil up to stay out of your way. Great for hand tools and portable appliances. Conductors are stranded copper with color-coded rubber insulation (1-black, 2-white, 3-green [ground], 4-red, 5-orange, 6-blue, 7-yellow, 8-brown, 9-gray, 10-purple). UL listed and CSA certified, unless noted.

The ***2-ft. long*** cords extend to 10 feet and ***4-ft. long*** cords extend to 20 feet.

♦ Not SVO cord. ■ Has one brown conductor instead of orange. Not CSA certified. ▲ Has two each of the first five conductor colors. Not UL listed or CSA certified. ♣ Not CSA certified. ♥ Has a red conductor instead of green. ✓ Has a yellow conductor instead of orange.

Titan Severe Duty Retracting Cords

The most abrasion- and cut-resistant self-retracting cords we offer, these are perfect for tough environments. They're also tangle resistant and have high memory retention for extreme extension conditions. Conductors are stranded copper with color-coded thermoplastic rubber insulation (1-black, 2-white, 3-green, 4-red) surrounded by a black thermoplastic rubber jacket. Temperature range is –58° to +194° F. UL listed and CSA certified.

The ***2-ft.*** cords extend to 10 feet and ***4-ft.*** cords extend to 20 feet.

Lamp Cable

Designed for lamps, radios, and small appliances. Cable has two 18 AWG stranded copper conductors with Type SPT-1 PVC insulation. Rated 10 amps @ 300 VAC. Cable is 0.21″ Wd. × 0.11″ Thick. Temperature range is –4° to +140° F. UL listed and CSA certified.

To Order: Please specify length (50, 100, or max. continuous length of 250 ft.) and color (black, brown, or white).

	Per Ft. 50-249	Per Ft. 250-Up
8104K1	$0.25	$0.19

Cable for Heat-Generating Appliances

Also known as heater cord and zip cord, this oil-resistant cable is designed for small heat-generating appliances such as coffee makers, toasters, and heat guns. Cable has two 16 AWG stranded annealed copper conductors with black Type HPN rubber insulation. Rated 15 amps @ 300 VAC. Cable is 0.300″ Wd. × 0.155″ Thick. Temperature range is –4° to +194° F. UL listed and CSA certified.

To Order: Please specify length (10, 25, 50, 100, or max. continuous length of 250 ft.).

	Per Ft. 10-249	Per Ft. 250-Up
4181T1	$1.16	$0.89

Easy-ID Low-Voltage Cable

Also known as zip wire, these two-conductor cables pull apart for quick installation. Ideal for DC applications because the red and black wires make it easy to identify polarity. Cables are made of stranded copper with PVC insulation. Temperature range is –40° to +176° F. Meet SAE J1128.

To Order: Please specify length (10, 25, 50, 100, or max. continuous length of 250 ft.).

AWG	Wd. × Thick.	VDC		Per Ft. 10-249	Per Ft. 250-Up

8/2	0.49″ × 0.25″	12	9697T6	1.79	1.56

★Amp rating is the max. value for each conductor (excluding ground) at a room temperature of 86° F. Amp rating decreases as room temperature increases, if multiple cables are bundled, or if inserted into conduit.

For information about cord type, see page 808. For information about AWG, see page 800.

Service Cords

Commonly used with portable equipment, these cords make a great power cord. Conductors are stranded copper with color-coded insulation (1-black, 2-white, 3-green, 4-red, 5-orange, 6-blue, 7-white with black tracer, 8-red with black tracer, 9-green with black tracer, 10-orange with black tracer). Rated for indoor and outdoor use, unless noted. UL listed and CSA certified, unless noted.

Neoprene rubber-jacket cords are more flexible than thermoplastic rubber-jacket cords. They have EPDM-insulated conductors. ***Thermoplastic rubber-jacket*** cords are more flexible than PVC. They have TPE-insulated conductors. ***PVC-jacket*** cords have PVC-insulated conductors.

To Order: Please specify length (10, 25, 50, 100, or max. continuous length of 250 ft.).

★Amp rating is the max. value for each conductor (excluding ground) at a room temperature of 86°F. Amp rating decreases as room temperature increases, if multiple cables are bundled, or if inserted into conduit.

Heat-Shrink Tubing Material Selection Guide

Heat-shrink tubing is designed to provide tight-fitting protective insulation for electrical connections, yet it's also great for bundling items, protecting surfaces, and identifying circuits.

Tubing comes stretched to its "ID before shrinking" to fit over your connection. When heat is applied, it shrinks to its "ID after shrinking." The overall length will also shrink slightly (usually less than 15%). The shrink ratio shows the relationship between the "before" and "after" sizes.

Moisture-seal heat-shrink tubing has an adhesive lining that sticks to the connection surface, preventing liquids from penetrating the ends of tubing.

Material	Resistance to Low/High Temp.	Flexibility	Abrasion Resistance	Chemical Resistance	See Page
PVC	Fair/Fair	Good	Good	Excellent	810
PVC—Moisture Seal	Fair/Fair	Fair	Good	Excellent	810
Polyolefin	Good/Good	Good	Fair	Good	810-812

Chemical-Resistant PVC Tubing

- Shrink Ratio: 2 to 1
- Shrink Temperature: 212° F
- Temperature Range: –4° to +221° F

PVC is more economical than polyolefin and has better chemical and abrasion resistance. It also resists sunlight.

Choose-a-Color Flame Retardant

- UL 224, VW-1
- AMS-DTL-23053/2 Class 2 (formerly MIL-DTL-23053/2 Class 2)

To Order: Please specify color: black, blue, clear, green, red, white, or yellow.

★ Sold in a pkg. of 3.

Black Flame-Retardant Assortment—Includes 100 6″ lengths in these quantities and IDs after shrinking: 25 of 1/32″, 25 of 1/16″, 15 of 1/8″, 15 of 3/16″, 10 of 1/4″, and 10 of 3/8″ (see above for ID before shrinking and wall thickness).

8061K5 ..... **Each** $45.29

Black Flame-Retardant Mini-Spool Assortment—Use rack alone or wall mount using the two 1/4″ dia. mounting holes (fasteners not included). Assortment includes five spools in these lengths and IDs after shrinking: 100 ft. of 1/32″ and 25 ft. each of 1/16″, 3/32″, 1/8″, and 3/16″ (see above for ID before shrinking and wall thickness). **Also Available:** Replacement spools. Please ask for 8061K9 and specify ID after shrinking.

8061K7 ..... **Each** $105.92

Moisture Seal

Great for outdoor applications; the adhesive lining bonds to the connection surface for excellent moisture protection. Color is black.

Yellow/Green Striped Flexible Polyolefin Tubing

- Shrink Ratio: 2 to 1
- Shrink Temperature: 248° F
- Temperature Range: –67° to +275° F
- UL recognized and CSA certified

The yellow and green stripe on this thin-wall tubing typically identifies ground wire and cable.

For information about heat-shrink tubing, see page 810.

Flexible Polyolefin Tubing

- Shrink Ratio: 2 to 1
- Shrink Temperature: 250° F
- Temperature Range: –67° to +275° F
- UL recognized and CSA certified (except clear tubing)
- AMS-DTL-23053/5 Classes 1 (color tubing) & 2 (clear tubing) (formerly MIL-DTL-23053/5 Classes 1 & 2)

Polyolefin tubing is more flexible than PVC and shrinks less lengthwise. Colored for easy identification.

To Order: Please specify color: black, blue, clear, green, red, white, or yellow.

Black 102-Piece Assortment

- Shrink Temperature: 212° F
- UL recognized and CSA certified
- AMS-DTL-23053/5 Class 1 (formerly MIL-DTL-23053/5 Class 1)

Assortment includes 102 6″ lengths in these quantities and IDs after shrinking: 30 of 3/32″, 28 of 1/8″, 20 of 3/16″, 14 of 1/4″, six of 3/8″, and four of 1/2″. Comes in a compartmented plastic box.

6363K21 ..... **Each** $67.65

Flame-Retardant Flexible Polyolefin Tubing

- Shrink Ratio: 2 to 1
- Shrink Temperature: 194° F
- Temperature Range: –67° to +275° F
- UL 224, VW-1 for flame retardance and CSA certified
- AMS-DTL-23053/5 Classes 1 & 3 (formerly MIL-DTL-23053/5 Classes 1 & 3)

Rated for flame retardance, this polyolefin tubing is more flexible than PVC and shrinks less lengthwise. Color is black.

For information about heat-shrink tubing, see page 810.

Low-Smoke Flame-Retardant Polyolefin Tubing

- Shrink Ratio: 3 to 1
- Shrink Temperature: 250° F
- Temperature Range: –67° to +221° F
- MIL-C-24643

Ideal for enclosed environments such as ships, tunnels, and mass transit vehicles, this tubing emits minimal amounts of smoke and toxic and acid gases during combustion. Also known as halogen-free tubing, it meets ABS (American Bureau of Shipping) standards. Color is black.

High-Shrink-Ratio Flexible Polyolefin Tubing

- Shrink Ratio: 4 to 1
- Shrink Temperature: 250° F
- Temperature Range: –67° to +275° F
- UL recognized
- AMS-DTL-23053/5 Class 1 (formerly MIL-DTL-23053/5 Class 1)

The high shrink ratio of this tubing enables it to fit over a wide range of cable and component diameters before shrinking, plus it is more flexible than PVC. Great for irregularly shaped objects. Color is black.

ID After Shrinking	ID Before Shrinking	Wall Thick. After Shrinking	6″ Lengths	6″ Lengths Each	48″ Lengths	48″ Lengths Each

Moisture-Seal Flexible Polyolefin Tubing

2 to 1 Shrink Ratio

- Shrink Temperature: 250° F
- Temperature Range: –67° to +230° F
- UL recognized
- AMS-DTL-23053/4 Class 2 (formerly MIL-DTL-23053/4 Class 2)

3 to 1 Shrink Ratio

- Shrink Temperature: 250° F
- Temperature Range: –67° to +230° F
- UL recognized
- AMS-DTL-23053/4 Class 3 (formerly MIL-DTL-23053/4 Class 3)

4 to 1 Shrink Ratio

- Shrink Temperature: 230° F
- Temperature Range: –67° to +230° F
- UL recognized, unless noted

4 to 1 Shrink Ratio—*High Temperature*

- Shrink Temperature: 275° F
- Temperature Range: –40° to +266° F
- UL recognized

Adhesive lining melts to bond to the underlying surfaces, preventing moisture from penetrating the ends of the tubing. Color is black, unless noted.

3 to 1 shrink ratio tubing accommodates larger size differences between cables and connectors, but is less flexible than 2 to 1 shrink ratio tubing.

4 to 1 shrink ratio tubing covers the widest range of cable and components as well as irregularly shaped objects. Not as flexible as other shrink ratios, but has better abrasion resistance. *High-temperature* tubing is better at handling heat, but it is less flexible and requires a higher shrink temperature. **To Order:** For high-temperature tubing, please specify color: black or clear (2735K23 only available in black).

Wrap-Around Moisture-Seal Polyolefin Tubing

- Shrink Ratio: 3 to 1
- Shrink Temperature: 248° F
- Temperature Range: –67° to +230° F

Use this wrap-around tubing for repairs when you can't disconnect your cable to slide on standard tubing. Just wrap it around your cable, fasten with the adhesive strip, and apply heat. Adhesive lining melts to provide increased protection from moisture. Color is black.

ID After Shrinking	ID Before Shrinking	Wall Thick. After Shrinking	8″ Lengths	8″ Lengths Each	36″ Lengths	36″ Lengths Each

For information about heat-shrink tubing, see page 810.

Moisture-Seal Abrasion-Resistant Polyolefin Tubing

An adhesive lining prevents liquids from penetrating the ends of this tubing. It also has thick walls for good abrasion resistance.

9″ and 48″ Lengths

- Shrink Ratio: 3 to 1
- Shrink Temperature: 250° F
- Temperature Range: –67° to +230° F
- UL listed and CSA certified for underground applications

High-Shrink-Ratio Abrasion-Resistant Polyolefin Tubing

- Shrink Ratio: 6 to 1
- Shrink Temperature: 248° F
- Temperature Range: –67° to +230° F

Having the highest shrink ratio allows this tubing to accommodate large size differences between cables and connectors as well as irregularly shaped objects. The thick walls provide good abrasion resistance, but limit flexibility. Color is black.

Harsh Environment FEP Tubing

- Shrink Ratio: 1.3 to 1
- Shrink Temperature: 350° F
- Temperature Range: –400° to +400° F
- AMS-DTL-23053/11 (formerly MIL-I-23053/11), unless noted

FEP (fluorinated ethylene propylene) tubing provides excellent abrasion and chemical resistance but doesn't require the high shrink temperature of PTFE. It is transparent.

Low Shrink

Maximum continuous length is 4 ft.

★ Does not meet AMS-DTL-23053/11.

For information about heat-shrink tubing, see page 810.

Harsh Environment PTFE Tubing

- Shrink Temperature: 650° F
- AMS-DTL-23053/12 (formerly MIL-I-23053/12)

PTFE (polytetrafluoroethylene) tubing has the best abrasion and chemical resistance of any tubing we offer. It is translucent.
To Order: Please specify 6″ or 48″ length.

Medium Shrink

- Shrink Ratio: 2 to 1
- Temperature Range: –454° to +500° F

Commonly used to insulate wire.

ID After Shrinking	ID Before Shrinking	Wall Thick. After Shrinking	For Wire Size (AWG)		Each 6″	Each 48″

Moisture Seal

- Shrink Ratio: See table
- Temperature Range: –400° to +400° F

Unique two-layer design—a PTFE outer layer shrinks for a tight fit and an inner layer melts to provide a moisture-proof seal.

ID After Shrinking	ID Before Shrinking	Shrink Ratio	Wall Thick. After Shrinking		Each 6″	Each 48″
0″■	0.065″	_____	0.015″	7960K21	$3.79	$20.20

■ Inner layers will melt together if no wire or object is present.

Fuel-Resistant High-Flex Tubing

- Shrink Ratio: 2 to 1
- Shrink Temperature: 347° F
- Temperature Range: –103° to +302° F
- AMS-DTL-23053/16 (formerly MIL-DTL-23053/16)

Ideal for vehicles and machines subject to harsh environments, this elastomer tubing resists aviation and diesel fuels, hydraulic fluids, and lubricating oils. The thick walls also provide good abrasion resistance while remaining flexible. Color is black.
To Order: Please specify 6″ or 48″ length.

ID After Shrinking	ID Before Shrinking	Wall Thick. After Shrinking		Each 6″	Each 48″

Ultra-Flex Neoprene Rubber Tubing

- Shrink Ratio: 2 to 1
- Shrink Temperature: 275° F
- Temperature Range: –94° to +250° F
- AMS-DTL-23053/1 Classes 1 & 2 (formerly MIL-DTL-23053/1 Classes 1 & 2), MIL-R-46846 Type I, Class 1

Maintains flexibility even at low temperatures. Tubing is black and comes in packages of five 6″ lengths.

ID After Shrinking	ID Before Shrinking	Wall Thick. After Shrinking		Per Pkg.
3/32″	3/16″	0.035″	7505K81	$6.52

3/8″	3/4″	0.057″	7505K86	11.53

High-Temperature Ultra-Flex Fluoroelastomer Tubing

- Shrink Ratio: 2 to 1
- Shrink Temperature: 347° F
- Temperature Range: –67° to +392° F
- AMS-DTL-23053/13 (formerly MIL-DTL-23053/13), MIL-R-46846 Type III, Class 1

Withstands higher temperatures than neoprene tubing and delivers better abrasion and chemical resistance while maintaining flexibility. Tubing is black and comes in 6″ lengths.

ID After Shrinking	ID Before Shrinking	Wall Thick. After Shrinking		Each
3/32″	3/16″	0.035″	7501K81	$4.08

High-Strength Harsh Environment PVDF Tubing

- Shrink Ratio: 2 to 1
- Shrink Temperature: 347° F
- Temperature Range: –67° to +347° F
- UL 224, VW-1 for flame retardance and CSA certified
- AMS-DTL-23053/18 Class 1 (formerly MIL-DTL-23053/18 Class 1) and AMS-DTL-23053/8 (formerly MIL-DTL-23053/8)

Great strength and chemical resistance at high temperatures. Tubing is transparent, allowing for visual inspection.

ID After Shrinking	ID Before Shrinking	Wall Thick. After Shrinking	6″ Lengths Pkg. Qty.		Per Pkg.	48″ Lengths	Each
1/32″	1/16″	0.010″	—		—	7478K79	$3.38

Low-Shrink-Temperature Harsh Environment Kynar (PVDF)/Polyolefin Tubing

- Shrink Ratio: 2 to 1
- Shrink Temperature: 302° F
- Temperature Range: –67° to +275° F
- UL recognized and UL VW-1 for flame retardance
- AMS-DTL-23053/18 Class 2 (formerly MIL-DTL-23053/18 Class 2)

Constructed from a blend of Kynar (PVDF) and polyolefin, this flame-retardant tubing is nearly as strong and abrasion resistant as FEP and Kynar, but shrinks at a lower temperature. Plus, it's more flexible than polyolefin. **To Order:** Please specify color: clear or black.

ID After Shrinking	ID Before Shrinking	Wall Thick. After Shrinking	Pkgs. of 5 6″ Lengths		Per Pkg.	48″ Lengths	Each
3/32″	3/16″	0.010″	6823K66	$6.20	6823K29	$6.44

For information about heat-shrink tubing, see page 810.

Sure-Grip Fabric Heat-Shrink Tubing

- Shrink Ratio: 2 to 1
- Shrink Temperature: 230° F
- Temperature Range: –40° to +257° F
- UL recognized

Get the flexibility of fabric sleeving with the grip and protection of heat-shrink tubing. The polyethylene/polyester woven fabric shrinks when heat is applied for a secure grip on your cable and hose. It provides abrasion resistance, resists trapping water, and suppresses noise and rattle. Color is black.

EPDM Rubber No-Heat Shrink Tubing

Get a permanent, durable environmental seal and complete insulation of your connection without the use of a heat gun or wand. To form a seal, just position the tubing (furnished in its expanded size) and pull out the removable spiral-wound core to shrink tubing. Tubing will insulate wire and cable splices rated to 1000 volts. It resists fungus, acids, alkalies, ozone, and ultraviolet light; the resiliency and grip pressure stay strong even after years of exposure. Tubing can also be buried and submerged. Made of waterproof EPDM rubber with no chlorides or sulfurs. Color is black. Meets ANSI C119.1 water seal requirements. CE approved.

ID After Shrinking	ID Before Shrinking	Max. Length Covered	Length Before Shrinking		Each

Radiant Heat-Shrink Wand

Within seconds, this wand reaches its operating temperature of 1500° F to create a circle of heat for shrinkable tubing, plastic tubing, and solder sleeves. Use as a hand-held portable tool or mount on your bench with the included stand. Wand is 7½″ Lg.×1½″ Wd.×1¾″ Ht. and operates on 115 VAC, 60 Hz. Has a three-prong plug with a 6-ft. cord. CE approved.

Heating elements (sold separately) are required for proper operation. Designed for intermittent use (heating intervals of less than two minutes), they are quartz encapsulated and specially plated to reflect and focus heat. Optional ***wire guards*** (sold separately) protect user from direct contact with elements.

Heat-Shrink Wand and Stand

7498K21	Each	$778.08

Components

Heat-Shrink Tubing Adhesives

For an easy, effective, and economical moisture seal, use this adhesive with your heat-shrink tubing. It wraps like tape around the ends of even irregularly shaped objects. Just slide your tubing over and heat to melt the adhesive. Comes on a strip with a peel-off liner.

0.026″ thick adhesive is thermoplastic, just like the adhesive found on the inside of most moisture seal tubing. Temperature range is –67° to +248° F and color is translucent yellow.

0.062″ thick adhesive seals larger gaps, making it ideal for irregular shapes. Made of butyl. Temperature range is –40° to +194° F and color is gray.

0.026″ Thick

EMI/RFI-Shield Tubing

- Shrink Ratio: 2 to 1
- Shrink Temperature: 194° F
- Temperature Range: –67° to +275° F

A layer of cloth shielding protects your unshielded wire or cable from EMI/RFI. Use on shielded wire or cable for added protection or for coverage at the terminal where an existing shield has been stripped back for the connector. Tubing is black polyolefin. Note: For proper grounding, a conductive wire (see pages 800-802) or braid strip (see page 930) should be wound around the outside of wires or attached by solder or conductive epoxy (see page 3407) prior to shrinking.

Electrical Insulating Resins and Large Cable Jacket Repair Kits

Jacket Repair Kit (Resin Sold Separately)

Insulate electrical connections and repair the insulating jacket on service cable. Rated to 194° F.

Permanent 1000 Max. Voltage Resin— This two-part polyurethane resin bonds to most modern cable jackets. It has a low viscosity, so it flows well prior to setting and fills the closure to eliminate voids. Gels in 18 minutes at 73° F; reaches full strength in 24 hours. Color is green.

Permanent 8000 Max. Voltage Resin— Two-part epoxy resin bonds to most modern cable jackets and is oil resistant. Gels in 16 minutes at 73° F; reaches full strength in 24 hours. Color is black.

Permanent Flame-Retardant 1000 Max. Voltage Resin— Polyurethane like the 1000 max. voltage above, but less viscous. Gels in 15 minutes at 73° F; reaches full strength in 24 hours. Color is black.

Re-enterable 1000 Max. Voltage Resin— Soft, two-part polybutadiene resin is for splices that may be accessed later for repair or reconfiguration. Gels in 62 minutes at 73° F; reaches full strength in 36 hours. Color is amber.

Jacket Repair Kits— Contents include reusable wrap-around mold and most materials needed to make 10 jacket repairs and splices of large cable. Insulating resin not included (we recommend the permanent flame-retardant 1000 max. voltage resin described above).

	Size		Each

For information about heat-shrink tubing, see page 810.

Moisture-Seal Heat-Shrink End Caps

Seal off cylindrical objects and crimped connections from moisture with these polyolefin end caps. When heated, the adhesive lining bonds to the cable jacket to form a seal. Shrink temperature is 257° F and temperature range is –67° to +230° F. Color is black. Sizes up to 0.09″ ID after shrinking are UL recognized.

Moisture-Seal Heat-Shrink Cable Splitters

Three-Way Splitter

Insulate and seal cables where the jacket is removed to route individual conductors. Use on armored cable, sheathed cable, and conduit ends. Made of flame-retardant cross-linked polyolefin with an adhesive lining, these splitters provide excellent electrical and mechanical protection. Shrink temperature is 250° F and temperature range is –67° to +275° F. Color is black.

Spiral Bundling Wrap-Around Sleeving

Reusable and flexible, this easy-to-use spiral wrap installs like tape around bundles of wire, tube, and hose. Wrap also permits access anywhere along its length.

Polyethylene— Comes on a spool. Temperature range is –76° to +190° F. Sleeving is abrasion and solvent resistant and is UL recognized. **To Order:** Please specify length from those listed in the table. *Clear* wraps are for indoor use. *Ultraviolet-resistant* wrap is black and ultraviolet-stabilized for outdoor use in direct sunlight. *Choose-a-color* wraps are for indoor use. **To Order:** Please specify blue, green, orange, red, white, or yellow.

Self-Extinguishing Nylon— Self extinguishing, and doesn't produce any toxic or irritating byproducts even if exposed to an open flame or high temperatures. Lightweight and highly abrasion resistant. Temperature range is –40° to +250° F. Comes on a spool. UL recognized. **To Order:** Please specify black or clear and length from those listed in the table. Black wrap is ultraviolet-stabilized for outdoor use in direct sunlight.

PTFE— Chemically inert and meets UL 94V0 for flammability resistance. Temperature range is –454° to +500° F. UL listed. **To Order:** Please specify black or translucent.

Easy-Open Polyester Wrap-Around Sleeving

Self-wrapping design keeps this sleeving closed around your cable or bundle of wires without the need for an adhesive strip, tie wraps, or special tools, yet sleeving opens and closes easily for maintenance. Made of black polyester.

Braided

Braided sleeving is UL recognized and CSA certified. Temperature range is –103° to +257° F.

ID	Bundle Dia. Range	Wall Thick.	3-ft. Lengths	Each	25-ft. Lengths	Each

Woven

Woven sleeving provides better abrasion resistance and is flame retardant. Meets ASTM E162. Temperature range is –58° to +257° F.

Expandable Mesh Sleeving

Sleeving expands to several times its diameter for easy installation, then tightens around your bundle of wire, cable, or tubing (except for easy-install wrap-around sleeving). Durable braided construction provides flexibility, prevents condensation, and permits heat and moisture dissipation. Sleeving also provides good resistance to abrasion and chemicals. Cut sleeving with a hot knife to prevent fraying, unless noted (see page 2361 for hot knives). Temp. range is –103° to +257° F, unless noted. UL recognized and CSA certified except super duty nylon.

Choose-a-color polyester is available in seven colors for color coding your wire bundles. **To Order:** Please specify color: black, blue, green, orange, red, white, or yellow.

Flame-retardant polyester meets UL VW-1 and FR1 as well as MIL-STD-202 for flammability. Color is black with white strand.

Easy-cut polyester has tighter braiding than other sleeving to resist fraying when cut with scissors. Color is black.

Heavy duty polyester is braided from heavier duty monofilament, giving it higher resistance to cuts and abrasion. Great for protecting wire, cable, and tubing that comes in contact with rough surfaces. Color is black.

Super duty nylon is braided with flat, thicker filaments for the best abrasion resistance. Good for hose applications as well as wire, cable, and tubing. Temperature range is –49° to +302° F. Color is black.

Easy-install wrap-around polyester has secure hook-and-loop closure, so there's no need to disconnect wire or cable to install—just wrap the sleeving around them for access anywhere along its length. Color is black.

Flame-Retardant Plenum-Rated Expandable Mesh Sleeving

Greatly reduce the danger of flame spread and smoke with this braided Halar (ethylene chlorotrifluoroethylene [ECTFE] copolymer monofilament) sleeving. It withstands high temperatures, so it's great for plenum applications and confined spaces. Plus, it resists corrosive chemicals and organic solvents. Temperature range is –94° to +302° F. Color is black with a white strand. UL 2024 and NFPA 262 rated for use in plenums. UL 224 VW-1 rated for flame retardance.

					Per Ft.

High-Temperature Expandable PEEK Mesh Sleeving

Great for use in extreme environmental conditions as hot as 500° F. This tough braided PEEK (polyetheretherketone) sleeving is lightweight and highly flexible, and the open weave construction allows sleeving to expand to fit different applications and sizes while remaining resistant to trapping water, heat, and humidity. Great for protecting cable assemblies, hose, and wire harnesses from abrasion, chafing, and cutting. Color is black. Temperature range is –94° to +500° F. Meets UL VW-1 for flame retardance.

					Per Ft.	
ID	Bundle Dia. Range	Wall Thick.	Roll Lg., ft.		Partial Roll	Full Roll

Harsh-Environment Expandable PTFE Mesh Sleeving

Braided PTFE construction stands up to the most hostile environments and makes this the toughest expandable sleeving we offer. Its monofilaments are heavier than PEEK, giving it better abrasion and chemical resistance. Temperature range is –94° to +482° F. Color is clear.

Chemical-Resistant Polyvinyl Chloride (PVC) Sleeving

PVC protects your cable from heat, abrasion, and many chemicals, oils, and acids. Temperature range is –4° to +221° F. Color is black. UL listed and passes UL 224 VW-1 for flame retardance. **To Order:** Please specify length (10, 25, 50, or 100 ft.).

Abrasion-Resistant Nylon Fabric Sleeving

Sleeving is woven from nylon into a highly abrasion-resistant fabric sleeve. Great for protecting painted finishes on chains, cables, and springs. Slip over wire, cable, hose, and more—just secure with nylon cable ties to complete installation (ties not included; see pages 1516-1522). Temperature range is –40° to +250° F. Color is black. MSHA (Mine Safety and Health Administration) approved. Maximum continuous length is 100 ft.

Chemical-Resistant Polyester Wrap-Around Sleeving

Just wrap this sleeving around your cable or bundle of wires and close with the adhesive strip for more permanent protection than helical and hook-and-loop mesh sleeving. It has a vinyl coating to resist mild chemicals, solvents, and abrasion. Temp. range is –4° to +212° F. Color is black. UL recognized. Meets UL 224 VW-1 for flame retardance and MIL-C-43006E, Type II, Class 1. Roll length is 25 ft.

ID	Bundle Dia. Range	Flat Wd.	Wall Thick.		Per Ft. Partial Roll	Per Ft. Full Roll

EMI/RFI-Shield Polyurethane Wrap-Around Sleeving

The aluminum foil shield bonded to the inside of this polyurethane sleeving gives it excellent protection against electromagnetic and radio-frequency interference (EMI and RFI). It also includes a braided tin-coated copper grounding strap. Sleeving is easy to install and more permanent than helical and hook-and-loop mesh sleeving—just wrap it around your cable or bundle of wires and close with the adhesive strip. It provides good abrasion resistance and excellent solvent resistance. Temperature range is –40° to +225° F. Color is black. UL recognized and meets UL 224 VW-1 for flame retardance. Roll length is 25 ft.

Super-Abrasion-Resistant Expandable Metallic Mesh Sleeving

Both strong and flexible, this braided metallic sleeving protects wire, cable, and hose in highly abrasive environments. Sleeving expands for installation—just pull it tight around the bundle for a secure fit. Color is silver. Maximum continuous length is 100 ft.

Tinned copper sleeving works well in EMI shielding and grounding applications. Cut with scissors. ***Stainless steel*** sleeving is Type 304 and corrosion resistant. Cut with sheet metal snips (see page 2346).

♦ Prices are approximately 25% lower when you order the maximum continuous length of 100 ft.

Super-Abrasion-Resistant Ballistic Nylon Wrap-Around Sleeving

If this sleeving were any tougher, it would be made of metal. It is made of woven ballistic nylon, similar to that found on high-quality soft luggage, so it's built for abrasion resistance and flexes easily. Hook-and-loop closure makes it easy to install. Temperature range is –60° to +180° F. Color is black. Roll length is 25 ft.

High-Temperature Fiberglass Sleeving

Sleeving made from plastics won't last in these temperatures. Cut this sleeving with scissors.

1000° F

Good for general heat protection, this braided sleeving resists alkalies, water, solvents, and oil. Temperature range is –40° to +1000° F. Color is white. **To Order:** Please specify length (5, 10, 25, 50, or maximum continuous length of 100 ft.).

Heat-Dissipating Fiberglass Sleeving

Put a layer of protection between personnel and hot hoses and piping. The silicone rubber coating over this thick braided fiberglass sleeving allows heat to dissipate. It can reduce the outer temperature of a 380° F steam hose to 130° F. Temperature range is –60° to +600° F. Color is blue. **To Order:** Please specify length (1, 5, 10, 25, or maximum continuous length of 50 ft.).

Spark-Resistant High-Temperature Fiberglass Sleeving

Made of fiberglass with a silicone rubber coating, this sleeving sheds sparks and molten metal splash. Exposure to a torch will char the coating but won't scorch the fiberglass inner layer. Sleeving resists hydraulic fuels and lubricating oils. Temperature range is –65° to +500° F. Color is orange. **To Order:** Please specify length (1, 5, 10, 25, or maximum continuous length of 50 ft.).

Standard

Sleeving is knitted.

Spark-Resistant High-Temperature Fiberglass Wrap-Around Sleeving

Similar to the standard spark-resistant sleeving on this page, but this sleeving has a hook-and-loop strip so you can wrap it easily around your cable, hose, or bundle of wires without disconnecting. Sleeving is braided with a silicone rubber coating. Temperature range is –76° to +500° F. Color is orange. Maximum continuous length is 50 ft.

Heat-Reflective Fiberglass Wrap-Around Sleeving

Protect your critical components with this sleeving. Made of woven fiberglass and laminated with aluminum foil, it withstands ambient heat up to 392° F as well as radiant heat. It also offers good fluid and chemical resistance and maintains a circular profile when flexed. The wrap-around design makes it easy to install over existing wires. Temperature range is –40° to +392° F. Meets ASTM D350 requirements as self extinguishing. Sold in 3-ft. lengths.

Electrical-Insulating Fiberglass Sleeving

Silicone Rubber Coated

An excellent secondary insulator for individual wires and bundles of wire, this sleeving remains highly flexible while providing increased temperature and abrasion resistance. Insulates up to 7000 volts. All are UL recognized and CSA certified.

***Vinyl Coated*—**Resists waxes, alcohols, petroleum solvents, esters, and many alkalies and acids. Temperature range is –4° to +266° F. Color is black. Meets UL VW-1 for flame retardance.

***High Flex Acrylic Coated*—**The acrylic resin insulation makes this sleeving more flexible than silicone rubber. Resists corrosion and many acids and organic solvents. Temperature range is –13° to +311° F. Color is tan.

***High Temperature Silicone Rubber Coated*—**Resists ozone and weathering and will self extinguish, leaving a nonconductive white ash. Maintains excellent flexibility throughout its temperature range of –94° to +392° F. Meets UL VW-1 for flame retardance. **To Order:** Please specify color: black or white.

***Expandable Rubber Coated*—**Expands to twice its relaxed size, providing the flexibility needed to snugly fit over irregularly shaped objects. Has excellent abrasion, chemical, and moisture resistance. Temperature range is –67° to +392° F. **To Order:** Please specify color: black or white.

Ultra-High-Temperature Silica Sleeving

1800° F

Silica withstands higher temperatures than fiberglass. Cut with scissors. Color is white. **To Order:** Please specify length (1, 5, 10, 25, or maximum continuous length of 50 ft.).

1800° F sleeving has braided continuous fibers for superior strength and abrasion resistance. It has 98% silica content. Sleeving is coated to aid in installation; the coating then decomposes when used in high-temperature applications. Resists acids, grease, alcohol, solvents, petroleum, and molten metal splash. Temperature range is –100° to +1800° F. ***2300° F*** sleeving is woven and has 98% silica content. Resists alkalies, water, detergents, petroleum, UV, flame, and salt. Temperature range is –40° to +2300° F.

Ultra-High-Temperature Ceramic Sleeving

1100° F

2600° F

Ceramic will not burn, and it resists molten metal splash, abrasion, acids, alkalies, water, ammonia, alcohol, solvents, and petroleum. Expands slightly for easy installation. Not rated for low-end temperature. Cut with scissors. Color is white. Meets MIL-I-24244B. **To Order:** Please specify length from those listed in the table.

***1100° F*—**Braided from calcium aluminum silicate.

***2600° F*—**Braided from alumina, boria, and silica fibers with a high aluminum content (96%) for additional strength, flexibility, and temperature resistance.

High-Strength Abrasion-Resistant Nomex Sleeving

Get strength and abrasion resistance unmatched by fiberglass, silica, and ceramic. Nomex sleeving, knitted from Aramid fiber, doesn't irritate the skin like fiberglass and silica. It resists most acids and alkalies, water, hydraulic fluid, alcohol, solvents, waxes, petroleum, UV, flame, and salt. Temperature range is –320° to +400° F. Color is white.

To Order: Please specify length (5, 10, 25, 50, or maximum continuous length of 100 ft.).

High-Temperature Abrasion-Resistant Kevlar-Reinforced Fiberglass Sleeving

Kevlar protects police officers from bullets—imagine the protection it could provide in your application. Get strength, flexibility, and better abrasion resistance than plain fiberglass and silica sleeving with this braided sleeving. It resists acids, alkalies, water, waxes, UV, and flame. Maximum temperature is 650° F. Not rated for low-end temperature. Color is light yellow. **To Order:** Please specify length (5, 10, 25, 50, or maximum continuous length of 100 ft.).

Heat-Reflective Easy-Install Convoluted Sleeving

Install this sleeving easily over your bundles of wire, cable, tube, and hose to protect them from ambient heat up to 257° F. Made of nylon copolymer with a highly reflective aluminum surface that resists fluids such as gasoline, oil, brake fluid, and antifreeze. Temperature range is –40° to +257° F. Color is silver. Sold in 3-ft. lengths.

ID	Wall Thick.		Each

Heat-Reflective Flex-and-Stay Convoluted Sleeving

Often used in engine applications, this flexible, crush-resistant sleeving reflects radiant heat and holds its shape when bent, making it great for routing and protecting wire, cable, and hose. Made of aluminum bonded with woven fiberglass. Temperature range is 0° to 900° F. Color is silver. Max. continuous length is 15 ft.

Easy-Install Convoluted Sleeving

No need to disconnect your wires and cable for insertion—this conduit-like sleeving spreads open for easy installation. Sleeving won't gap when you bend it, making it a great choice for wire and cable routing. It is also solvent and acid resistant.

Polyethylene provides good abrasion resistance. Temperature range is –40° to +200° F. *Black* and *choose-a-color* are UV-stable for outdoor use. **To Order:** For choose-a-color, please specify color: blue, orange, or red. *Flame retardant* meets UL 94V2. Color is gray.

Nylon offers a higher maximum temperature than polyethylene and has excellent abrasion resistance. Temperature range is –40° to +300° F. Color is black with a gray stripe.

High-Temperature Chemical-Resistant PTFE Sleeving

Also known as spaghetti tubing due to its small size, this sleeving is flexible, chemically inert, and resistant to melt-off by soldering irons. PTFE (polytetrafluoroethylene) is ideal for electrical insulation as well as transporting chemicals. Tubing also has a smooth, friction-resistant surface. Temperature range is –454° to +500° F. Color is white. Meets AMS 3655, UL 94V0 for flame resistance, and is CSA certified. **To Order:** Please specify length (10, 25, 50, or maximum continuous length of 100 ft.).

Choose-a-Color Flexible PVC Conduit (ENT) and Fittings

Commonly used in wall, floor, slab, and ceiling applications, this lightweight conduit comes in a variety of colors to easily identify different runs of wire. Temperature range is –4° to +140° F. UL listed and CSA certified. *Note:* Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit. For threaded fittings, trade size also designates the NPT (National Pipe Tapered) thread size of the threaded end.

Conduit

Also known as ENT (electrical nonmetallic tubing), this pliable conduit is easy to install. Made of PVC. **To Order:** Please specify color (blue, yellow, or red) and length (10-, 25-, 50-, 100 ft., or max. continuous length listed in table).

Trade Size	ID	OD	Bend Radius	Max. Cont. Lg., ft.		Per Ft.♦

1″	1″	1.31″	6″	100	8067K13	1.91

♦ Prices are approx. 15% lower for the max. continuous length.

Fittings

Fittings are thermoplastic and have tabs that snap in and hold firmly against the ribs in flexible PVC conduit (ENT). Color is blue. UL listed and CSA certified.

Threaded connectors have NPT male threads. For locknuts, see 7945K series on page 826. ***Snap-in connectors*** snap into holes in enclosures and other applications.

♦ Prices are approx. 15% lower for 10 or more of the same size.

Continuous-Flex Nylon Conduit and Fittings

Protect moving and stationary electrical wires and cable on machinery—even through millions of bending cycles. This highly flexible conduit is perfect for robotics, material handling, and other continuous-motion applications. Conduit and fittings are made of polyamide nylon, which is resistant to solvents, fuels, and hydraulic and lubricating oils. Also UV resistant. Color is black.

Conduit

Support Clip

Temperature range is –40° to +203° F. ***Conduit*** is UL recognized, CSA certified, and CE approved. ***Support clips*** hold conduit stationary where needed. All require one M6 screw, except 3185K78, which requires one M5 screw. Mounting hardware not included.

♦ Prices are approximately 15% lower for 10 or more of the same size.

Fittings

Straight Connector

90° Elbow Connector

90° Elbow Flanged Connector

A reinforced locking system resists pull-out from conduit, yet makes these connectors easy to install and remove. The locking system also allows the connector to remain stationary while the conduit pivots and swivels. Temperature range is –40° to +221° F. With an IP66 rating, fittings are resistant to dust and water jets.

Threaded fittings are offered with NPT (National Pipe Tapered) male threads or PG threads (European standard). UL recognized, CSA certified, and CE approved. ***Flanged*** fittings are unthreaded and can be bolted to machinery or electrical boxes. UL recognized and CE approved. ***90° elbow connectors*** have a slim profile for use in tight areas. ***Locknuts*** secure threaded connectors in place. (For NPT locknuts, see 7945K on page 826.)

Continuous-Flex Liquid-Tight Flexible Nonmetallic Conduit (Type A) and Fittings

Note: Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit. For threaded fittings, trade size also designates the NPT (National Pipe Tapered) thread size of the threaded end.

Conduit

Rated for continuous flexing applications while remaining liquid tight, this conduit resists crushing, abrasion, oil, and sunlight. It has a heavy duty PVC inner core with a nylon-reinforced PVC cover. Temperature range is –4° to +140° F. Color is orange. UL listed (Type A) and CSA certified.

Trade Size	ID	OD	Bend Radius	Max. Cont. Lg., ft.		Per Ft.♦

Liquid-Tight Flexible Nonmetallic Conduit and Fittings

Use this flexible nonmetallic conduit with these fittings to get a liquid-tight seal for damp applications. They resist sunlight and corrosion from water, oil, and many acids. *Note:* Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit. For threaded fittings, trade size also designates the NPT (National Pipe Tapered) thread size of the threaded end.

Conduit

Cuts cleanly with no jagged edges and has a smooth interior that makes wire pulling easy. **To Order:** Please specify length from those listed in the table.

Super flex is a very limber, helical PVC conduit with a tight bend radius—ideal for intricate wire routing. Temperature range is 0° to 158° F. Color is black. UL recognized, except ¼″ trade size.

Super tough is also known as Type B conduit. It is more crush and abrasion resistant than Super Flex. Made of a PVC spiral core surrounded by PVC. To cut, we recommend a tube cutter (8336A on page 2338). Temperature range is 0° to 154° F. Color is gray. UL (Type B) listed. CSA certified.

♦ Prices are approximately 20% lower for the max. continuous length (last length listed).

Fittings

Fittings are UL listed when used with Super Tough (Type B) liquid-tight flexible nonmetallic conduit.

Standard connectors are made of nylon and have a maximum temperature of 194° F. All have NPT male threads, unless noted. They include steel locknuts, are C-UL listed, and insert into conduit and fasten, unless noted. **To Order:** For standard connectors, please specify black or gray, unless noted. ***Multiangle*** style can change from a straight fitting to a 90° angle fitting, or any angle in between. For the ½″ and ¾″ sizes, simply loosen the center nut, swivel fitting to desired angle, and retighten the nut. The 1″ size swivels to the desired angle and holds in place without a nut.

Twist-in connectors are easy to install; they twist directly into conduit. They are made of nylon with NPT male threads and zinc locknuts. Maximum temperature is 194° F. CSA certified. **To Order:** Please specify black or gray. ***Twist-in couplings*** connect two pieces of conduit. They are made of PVC and have a maximum temperature of 176° F. Color is gray. C-UL listed.

● Locknut is nylon. CSA certified; not C-UL listed.

Standard 90° Elbow Connector

Standard Multiangle Connector

Twist-In Straight Connector

Flexible Metal Conduit and Fittings

Here's a flexible solution for tight spaces where it's difficult to install rigid conduit. *Note:* Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit. For threaded fittings, trade size also designates the NPT (National Pipe Tapered) or NPSM (National Pipe Straight Mechanical) thread size of the threaded ends.

Conduit

Galvanized steel has a heavy zinc coating that makes it a popular choice in corrosive environments. UL listed.

Aluminum is lighter than galvanized steel conduit and has good corrosion resistance. Commonly used to hook up motors and light fixtures. UL listed.

Twist-In Connector

Twist-In Coupling

Stainless Steel Flexible Metal Conduit and Fittings

Stainless steel construction provides superior corrosion resistance for harsh environments. *Note:* Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit. For threaded fittings, trade size also designates the NPSM (National Pipe Straight Mechanical) thread size of the threaded ends.

Conduit

Made of Type 305 stainless steel. **To Order:** Please specify length: 2 ft., 5 ft., 10 ft., or maximum continuous length of 25 ft.

Trade Size	ID	OD	Bend Radius		Per Ft. ♦
3/8″	0.44″	0.61″	1 1/8″	3994K11	$2.50

Specialty Flexible Metal Conduit Fittings

A **B** **C** **D** **E** **F** **G**

Connect flexible metal conduit and armored and metal-clad cable to boxes and enclosures. All are CSA certified. *Note:* Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit. For threaded fittings, trade size also designates the NPSM (National Pipe Straight Mechanical) thread size of the threaded ends.

A&B Straight Connectors*—**To install, insert into knockout, fasten the included locknut, and tighten screw onto conduit. They have NPSM male threads and are made of die cast zinc. UL listed. ***Style B allows you to connect two pieces of conduit to one knockout.

C-F Snap-In Straight Connectors*—**Snap securely into knockouts without locknuts or tools. Made of die cast zinc. UL listed. ***Style C provides the fastest installation time. Just snap conduit into connector. ***Styles D-F*** secure conduit with a screw after snapping in. *Styles D* and *F* allow you to connect two pieces of conduit to one knockout.

***G Protective Bushings*—**Also known as antishort bushings, these insert into conduit ends to protect cables from abrasion. Made of red thermoplastic.

Liquid-Tight Flexible Metal Conduit and Fittings

Used together, conduit and fittings seal out liquids and most vapors. Installs easily even in tight areas. *Note:* Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit. For threaded fittings, trade size also designates the NPT (National Pipe Tapered) thread size of the threaded end.

Conduit

Conduit is covered with a flexible jacket that resists sunlight. Jacket is PVC, except extreme high/low temperature standard flex, which has a thermoplastic rubber jacket. **To Order:** Please specify length: 5 ft., 10 ft., 20 ft., 25 ft., or any length up to the maximum continuous length listed in the table.

Standard flex (not UL listed) is an all-purpose galvanized steel conduit. Temperature range is –4° to +140° F. Color is gray.

Standard flex (UL listed) is a great all-purpose zinc-plated steel conduit that may be used underground. All except 1 1/2″ and 2″ sizes have a built-in copper ground. Temperature range is –4° to +140° F. CSA certified. **To Order:** Please specify blue or gray, unless noted (blue is typically used for data lines).

Liquid-Tight Flexible Metal Conduit and Fittings *(Continued from previous page)*

Conduit (Cont.)

To Order: Please specify length: 5 ft., 10 ft., 20 ft., 25 ft., or any length up to the maximum continuous length listed in the table.

Oil-resistant standard flex (UL listed) has an oil-resistant jacket to provide superior resistance to cutting fluids and corrosive materials. All except 1½″ and 2″ sizes have a built-in copper ground. May be used underground. Temperature range is –4° to +140° F. Color is gray. CSA certified.

Ultra flex (not UL listed) bends and twists to fit in the most space-restricted areas. Temperature range is –4° to +140° F. Color is black.

High/low temperature standard flex (UL listed) withstands severe temperatures (–51° to +221° F). All except 1½″ and 2″ sizes have a built-in copper ground. May be used underground. Color is gray.

Extreme high/low temperature standard flex (not UL listed) handles extreme temperatures (–76° to +302° F). Color is black.

Fittings

Fittings have NPT male threads. UL listed and CSA certified.

Light Duty— Fittings are die cast zinc and include a locknut. ***Heavy Duty—*** Include a locknut. *Straight* fittings are steel. *45°* and *90° elbow* fittings are malleable iron. ***Heavy Duty Corrosion Resistant—*** Made of Type 304 stainless steel for the most demanding environments. ***Heavy Duty with Grounding Lug—*** For external grounding applications. All include a locknut. *Straight* fittings are steel, unless noted. *45°* and *90° elbow* fittings are malleable iron. ***Heavy Duty with Wire-Mesh Grip—*** Provide strain relief and added protection against conduit pullout. All have stainless steel mesh and include a locknut. For cord grip fittings, see pages 839-842. *Straight* fittings are steel. *45°* and *90° elbow* fittings are malleable iron.

Also Available: Heavy duty straight and 90° elbow fittings in 2½″, 3″, and 4″ trade sizes (made of malleable iron). Please ask for 7119K888 and specify straight or 90° and trade size.

PVC Conduit, Fittings, and Access Ports

When used together, these easy-to-install conduit and fittings provide a lightweight, corrosion resistant, nonconductive alternative to steel. They're also resistant to sunlight, so they can be used above ground as well as in buried and concrete encasement applications.

Note: Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit. For threaded fittings, trade size also designates the NPT (National Pipe Tapered) thread size of the threaded ends.

PVC cement is required for conduit, untreaded fittings, and access ports (see page 3421).

Conduit

Also known as PVC Schedule 40 conduit. Both ends are unthreaded; one side has an expanded female end for joining with another piece of conduit. Color is gray. UL listed, except 8-ft. lengths, which are cut from UL listed material and can be shipped via small-parcel carrier.

Trade Size	ID	OD	8-ft. Lengths Each	10-ft. Lengths Each ♦

♦ Prices are approx. 15% lower for 10 or more of the same size.

Fittings

Can be used with PVC Schedule 40 and Schedule 80 conduit. The ends are unthreaded, unless noted. Color is gray. All are UL listed except locknuts, which are UL recognized.

Couplings—Connect two pieces of conduit.

Expansion Couplings—PVC expands and contracts with temperature changes … these couplings consist of two sections to compensate for length changes up to 4" on 7945K51-K55 and up to 8" on 7945K56-K59.

Female and Male Adapters—Have NPT threads on one end to connect fittings, boxes, and metallic systems that have threads.

Box Adapters—Connect conduit to an electrical enclosure (flange installs inside enclosure).

90° Long Elbows—Connect two pieces of conduit at a 90° angle.

Reducing Couplings—Connect two different sized pieces of conduit.

Locknuts—Secure female and male adapters to an enclosure or an outlet box. Work with NPT or NPSM (National Pipe Straight Mechanical) threads.

Access Ports

Also known as outlet bodies, these ports provide access to wires inside conduit for pulling, splicing, and maintenance. Use with PVC Schedule 40 and Schedule 80 conduit. Hubs are unthreaded. Furnished with a cover and a gasket. Color is gray. UL listed and CSA certified.

Thin-Wall Steel Conduit (EMT) and Fittings

These general purpose conduit and fittings are UL listed, unless noted. *Note:* Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit. For threaded fittings, trade size also designates the NPT (National Pipe Tapered) or NPSM (National Pipe Straight Mechanical) thread size of the threaded ends.

Conduit

Also known as EMT (electrical metallic tubing), this thin-wall untreaded conduit is made of galvanized steel. Bend it easily using a conduit bender (see pages 2333-2335). Can also be cut with a hacksaw. ***5-ft. lengths*** are cut from UL listed material and can be shipped via small-parcel carrier. **To Order:** For choose-a-color conduit, please specify color: black, blue, red, or white.

Thin-Wall Steel Conduit (EMT) and Fittings *(Continued from previous page)*

Straight Fittings

Designed for use with thin-wall steel conduit (EMT).

Die cast zinc are for light duty applications and are CSA certified. ***Raintight die cast zinc*** fittings meet UL raintight standard when used with EMT conduit and have a plastic O-ring that prevents water from entering conduit. ***Steel*** are for heavy duty applications and are C-UL listed, unless noted.

Connectors— Connect conduit to an electrical box. Locknut included. *Die cast zinc* and *raintight die cast zinc* have NPSM threads; *steel* have NPT threads. *Insulated* connectors have a plastic insert that protects wire from abrasion when being pulled.

Couplings— Join two pieces of conduit.

Specialty Fittings

For use with thin-wall steel conduit (EMT). CSA certified, except space-saver connectors.

Space-Saver Connectors— Screw into themselves without the need for a locknut to provide more room inside your box by keeping threads outside your box. Made of zinc-plated steel. C-UL listed.

Set Screw Snap-Tight Connectors— Connect conduit to an outlet box or enclosure without a locknut. As screw tightens, connector secures onto conduit and locks into the knockout. Made of zinc-plated steel.

Set Screw Offset Connectors— Connect conduit to an outlet box or enclosure where an offset is needed. Connectors have NPSM threads and include a locknut. Made of die cast zinc.

90° Set Screw Pulling Elbows— A removable cover allows for easy wire pulling at a 90° angle. Made of die cast zinc.

90° Compression Connectors— Connect conduit to an outlet box or enclosure at a 90° angle. Connectors include locknut and have NPSM threads. Made of die cast zinc.

90° Long Elbows— Connect two pieces of conduit at a 90° bend and avoid bending conduit. Made of galvanized steel.

Press-Fit Protective Bushings— Slide onto conduit ends to protect cables from abrasion when being pulled. Made of polypropylene. Some bushings (as noted) can also be used with medium-wall (IMC) and thick-wall (rigid) metal conduit.

Thin-Wall (EMT) Rigid-to-Flexible Metal Conduit Couplings

7984K2 and K3

Just slip on these couplings and tighten the screws to join thin-wall steel conduit (EMT) to flexible metal conduit. Made of die cast zinc. UL listed and CSA certified.

Note: Trade size refers to an industry designation for conduit fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit.

Trade Size: Thin-Wall Conduit (EMT)	Trade Size: Flexible Metal Conduit		Each 1-9	Each 10-Up

Medium-Wall (IMC) and Thick-Wall (Rigid) Steel Conduit and Fittings

Stronger walls mean better protection in heavy duty applications. All are UL listed, unless noted.

Note: Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit. For threaded fittings, trade size also designates the NPT (National Pipe Tapered) or NPSM (National Pipe Straight Mechanical) thread size of the threaded ends.

Conduit

This galvanized steel conduit has NPT male threads on both ends and a coupling threaded onto one end. ***5-ft. lengths*** are cut from UL listed material and can be shipped via small-parcel carrier.

Medium Wall— Also known as IMC (intermediate metallic conduit), it's a lightweight substitute for thick-wall conduit with just as much strength. This conduit has a slightly larger ID than thin-wall (EMT) conduit and has a lubricating coating for easier wire pulling.

Thick Wall— Also known as rigid conduit, it's impact and crush resistant.

Fittings

Threaded Couplings— Connect two pieces of conduit. Made of galvanized steel and have NPSM threads.

Three-Piece Couplings— The two outer pieces turn independently to connect two pieces of conduit when they can't be turned. Made of zinc-plated steel and malleable iron. Have NPT threads.

Slip-On Couplings— Connect two pieces of conduit in tight spaces when they can't be turned. Made of zinc-plated malleable iron, unless noted. Have NPSM threads. CSA certified.

Compression Couplings— Connect two pieces of unthreaded conduit. Made of zinc-plated steel and malleable iron. CSA certified.

Compression Connectors— Connect conduit to a box or enclosure. Made of zinc-plated steel and malleable iron and have NPSM threads. Locknut included. CSA certified.

Box Adapters— Also known as conduit nipples and chase nipples. Connect threaded conduit to a box or enclosure. Can also be used with a locknut to provide a short raceway between boxes or enclosures. Made of die cast zinc and have NPSM threads. CSA certified.

90° Pulling Elbows— Have a removable cover for wire pulling. Made of die cast zinc and have NPSM threads. CSA certified.

90° Short Elbows— Join conduit in tight spaces where it can't be bent. Made of malleable iron and have NPSM threads. 7513K74-K78 are CSA certified.

90° Long Elbows— Connect two pieces of conduit at a 90° angle. Made of galvanized steel and have NPT threads. CSA certified.

Reducing Bushings— Connect two different sizes of conduit. Made of zinc-plated steel and have NPSM threads.

Reducing Washers— Reduce the knockout size in an outlet box or enclosure (two washers are required per knockout). Made of galvanized steel. Package quantity is 10. CSA certified.

Nipple Extensions— Extend the length of conduit or connect two boxes or enclosures. Made of zinc-plated steel and have NPT threads. CSA certified.

Medium-Wall (IMC) and Thick-Wall (Rigid) Steel Conduit and Fittings

(Continued from previous page)

Hubs—Use to connect conduit to a threadless opening in a box or enclosure. They have an insulated throat to protect wires from abrasion when being pulled. Use in wet or dry locations. Made of die cast zinc and have NPT threads on conduit end and NPSM threads on enclosure end. CSA certified.

Offset Nipples—Use as an offset connector between enclosures. Offset is ¾″. Made of die cast zinc and have NPSM threads. CSA certified.

Threaded Bushings—Connect to the end of conduit or a connector to protect wires from abrasion when being pulled. Made of polypropylene and have NPSM threads. CSA certified.

Grounding Bushings—For grounding conduit. Compatible with copper and aluminum conductors, and insulated to protect wires from abrasion when being pulled. Set screw included. Made of die cast zinc and have NPSM threads.

Stainless Steel Conduit and Fittings

Need to run wires through a corrosive environment? You can do it with this conduit. All are UL listed. *Note:* Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a fitting, match the trade size of the conduit. For threaded fittings, trade size also designates the NPT (National Pipe Tapered) or NPSM (National Pipe Straight Mechanical) thread size of the threaded ends.

Conduit

All conduit is Type 304 stainless steel. ***Thin wall (EMT)***, also known as electrical metallic tubing, does not have threads. ***Thick wall (rigid)*** is impact and crush resistant. It has NPT threads with a coupling threaded onto one end.

Also Available: Thick-wall (rigid) conduit in Type 316 stainless steel. Please ask for 5150K9 and specify trade size and length (5 ft. or 10 ft.).

Thin Wall (EMT)

Thick Wall (Rigid)

Fittings

All are Type 316 stainless steel. ***Thin-wall (EMT) compression connectors*** connect conduit to a box or enclosure. They have NPT threads on one end. ***Compression couplings*** connect two pieces of unthreaded conduit. They do not have threads.

Thick-wall (rigid) couplings connect two pieces of conduit and have NPSM threads. ***90° long elbows*** connect two pieces of conduit at a 90° angle. They have NPT threads. ***Hubs*** have NPT threads on one end to connect conduit to a threadless opening in a box or enclosure.

Also Available: Thick-wall (rigid) fittings in Type 304 stainless steel. Please ask for 3403K9 and specify trade size and fitting type.

Metal Conduit Access Ports

Also known as outlet bodies, these ports provide access to wires inside conduit for pulling, splicing, and maintenance. All include a cover and neoprene gasket. Ports provide easy connection to medium-wall (IMC) and thick-wall (rigid) metal conduit. Also compatible with thin-wall steel conduit (EMT) when used with a compression connector, unless noted (see 7150K on page 827). UL listed.

Note: Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting an access port, match the trade size of the conduit. Trade size also designates the NPT (National Pipe Tapered) or NPSM (National Pipe Straight Mechanical) thread size of the threaded hubs of the ports.

Die cast aluminum ports are corrosion resistant and have NPSM threads.

Die cast aluminum ports with set screw allow you to connect thin-wall steel conduit (EMT) without using a compression connector. They have NPT threads and are CSA certified. UL listed rain-tight for thick-wall (rigid) conduit; concrete-tight for thin-wall conduit (EMT).

Zinc-plated cast iron ports offer durability and corrosion resistance. They have NPT threads and are CSA certified.

Stainless steel ports are Type 316 for the best corrosion protection. They have NPT threads.

Metal Conduit Fitting Locknuts

Standard

Sealing

Secure threaded conduit fittings to a knockout. Compatible with NPT (National Pipe Tapered) and NPSM (National Pipe Straight Mechanical) threads, these locknuts are made of zinc-plated steel. UL listed and CSA certified.

Note: Trade size is an industry designation for conduit and fittings and is not an actual measurement. When selecting a locknut, match the trade size of the fitting.

Sealing locknuts have a PVC molded sealer for moisture protection.

♦ Prices are approx. 15% lower for 10 or more pkgs. of the same size.

Multiconductor Building Cable Connectors

Screw Connector

Snap-In Connector

Locking Snap-In Connector

Use to connect multiconductor jacketed building cable (also known as Romex cable) to enclosures and outlet boxes. UL listed and CSA certified. *Note:* Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a connector, match the fitting trade size that corresponds to the knockout trade size of your box or enclosure. Then, make sure your cable diameter will fit in the connector. For screw connectors, trade size also designates the NPSM (National Pipe Straight Mechanical) thread size of the threaded ends.

Screw Connectors— Secure connector into a knockout with the included locknut. Then, insert cable through connector and tighten the two screws. Made of die cast zinc.

Snap-In Connectors— Just push the connector into a knockout and insert cable. Made of PVC.

Locking Snap-In Connectors— Push into a knockout, insert cable, and secure the wedge in the connector with pliers—the wedge clamps onto cable for a strong grip. Made of PVC.

Steel Outlet/Switch Boxes with Knockouts and Covers

Boxes and covers are galvanized steel. Boxes have multiple knockouts to connect fittings. Attach covers using screws.

Note: Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. For example, a 1/2″ trade size fitting will fit into a 1/2″ trade size knockout. A 1/2″ trade size knockout is actually 7/8″ dia.; 3/4″ is 1 3/32″ dia.; 1″ is 1 3/8″ dia.

Note: The capacity shown for the boxes (cu. in.) refers to the total volume of space inside the box, and varies depending on the depth of the box. Use extension rings to increase depth.

Blank Plate (1 Gang)

One Toggle Switch and One Duplex Receptacle Combination Plate (2 Gang)

Nylon plates are self extinguishing, mar resistant, and have a matte finish. **To Order:** Please specify brown, ivory, or white. Ground fault circuit interrupter (GFCI) plates also come in gray. ***Aluminum*** plates have a satin finish and are lacquered for corrosion resistance.

Stainless steel plates provide excellent corrosion resistance and have a brushed finish.

Ground fault circuit interrupter (GFCI) receptacle plates are also known as Decora plates.

Outlet Boxes with Hubs and Covers

Aluminum Single-Device (1 Gang) Box with One Hub

PVC Two-Device (2 Gang) Box with Two Hubs

Aluminum Single-Device (1 Gang) Box with Three Hubs

Hubs allow secure connections to your conduit without using fittings. UL listed. *Note:* Trade size refers to an industry designation for conduit and is not an actual measurement. When selecting a box, match the trade size of the conduit.

Single-device (1 gang) boxes hold one switch, GFCI, or duplex receptacle; ***two-device (2 gang)*** boxes hold two.

PVC boxes are gray and have unthreaded hubs for attaching PVC Schedule 40 rigid conduit with PVC cement (see page 3421). All have four 0.20″ dia. mounting holes. *Single-device boxes* are 2 7/8″ Ht. × 5 11/16″ Wd. × 2 5/16″ Dp. (19 cu. in.). *Two-device boxes* are 4 5/8″ Ht. × 4 5/8″ Wd. × 2″ Dp. (32 cu. in.). ***Polycarbonate covers*** for PVC boxes are gray. They include mounting screws and are CSA certified. Receptacle covers have a hinged lid, unless noted. *Single-device covers* are 3 3/16″ Ht. × 4 3/4″ Wd., unless noted. *Two-device covers* are 4 11/16″ Ht. × 4 11/16″ Wd.

Aluminum boxes have NPT female threaded hubs. They don't have mounting holes, unless noted. All are 2 7/8″ Ht. × 4 5/8″ Wd. × 2″ Dp. (18 cu. in.). ***Aluminum covers*** include mounting screws. 7169K53 and K52 are 2 1/2″ Ht. × 4 5/8″ Wd.; K49 is 2 13/16″ Ht. × 4 9/16″ Wd.

♦ Prices are approximately 15% lower for 10 or more of a single item.

Weatherproof Boxes and Covers

Rain and snow won't hurt these corrosion-resistant boxes, covers, and extension rings. Also ideal for use indoors in wet conditions, they have a gray powder coating. UL listed and CSA certified.

Note: Trade size refers to an industry designation for conduit and fittings and is not an actual measurement. When selecting a box, match the trade size of the conduit.

Boxes

Single Device (1 Gang)

Two Device (2 Gang)

Round

Boxes are aluminum and have NPSM (National Pipe Straight Mechanical) threaded hubs in the back and sides for secure connection to conduit and fittings. They come with closure plugs for unused hubs, a grounding screw, and attachable mounting lugs. Boxes may be mounted horizontally and vertically.

Single-device (1 gang) boxes hold one toggle switch, GFCI, duplex receptacle, or other electrical device; ***two-device (2 gang)*** boxes hold two.

Weatherproof While-in-Use Covers

Polycarbonate Two-Device (2 Gang) Duplex Receptacle and GFCI Receptacle

Aluminum Single-Device (1 Gang) Duplex Receptacle (Horizontal)

Protect outlets from the elements, even while in use. Covers completely shield the outlet and plug when closed. They're corrosion resistant and can withstand rain and snow; also ideal for use in wet locations indoors. All come with sealing gaskets and zinc-plated steel mounting hardware, and have a locking hasp for OSHA lockout/tagout requirements. Comply with NEC requirements for plugs in wet locations and NEMA 3R rated for falling liquid. UL listed.

Polycarbonate covers are translucent. They include adapter plates for configurations listed in the table, plus adapter plates for circular receptacles. *Two-device* cover also includes adapter plates for 16 additional configurations.

Aluminum covers are suitable for use in heavy duty or severe environments. They resist cracking and breaking and include adapter plates for configurations listed in the table. CSA certified. *One-device* covers also include an adapter plate for circular receptacles. *Two-device* cover includes adapter plates for 6 additional configurations including circular receptacles.

Floor Outlet Box

Made of stamped steel, this concrete-tight floor box is fully adjustable—external leveling screws allow 1 1/4" adjustment before concrete pour; internal screws allow 0.38" adjustment after pour. Also good for carpeted and tile floors. Box has 1/2" trade size knockouts (six on the sides; three on the bottom) and four 3/4" trade size knockouts on the side. Has a zinc coating. UL listed and CSA certified.

Duplex cover and ***carpet flange*** are brass.

Single-Channel Surface-Mount Indoor Raceway

PVC w/Snap-On Cover

Steel w/ Snap-On Cover

Steel

With a low profile and easy installation, this raceway is ideal for running power, data, or communications wiring where you can't get inside the walls. All are compatible with Wiremold raceway of the same size. Color is ivory (can be painted for a custom look). Raceway and components are UL and C-UL listed. ***Wire retention clips*** hold your wires in place along the raceway. ***Outlet boxes*** accept any standard wall plate (see page 832).

PVC raceway resists denting and scratching. Has an adhesive backing for installation in applications less than 50 volts. For applications up to 600 volts, fasten the raceway with screws (not included). Each raceway section consists of a base and a snap-on removable cover and can be cut with a hacksaw or shears.

Steel raceway is a rugged alternative to PVC and is great for small amounts of electrical or datacom wiring. It is 0.040″ thick and has a scratch-resistant finish. Each raceway section consists of a base and cover and can be cut with a hacksaw. Install by fastening a ***wall hanger*** to the wall and just snap the raceway onto the hanger (hanger has a 3/16″ dia. hole—screw not included), except *raceway with snap-on cover*, which provides easier access and has 9/32″ dia. mounting holes (screws not included).

Indoor Steel Raceway (NEMA 1)

Raceway Section without Knockouts

Connector

90° Elbow

T-Junction

End Flange

End Cap

6″ to 4″ Reducer

Also known as wireway and wire trough, use raceway and fittings to protect and route electrical wiring, cables, and hoses. Made of gray 16-ga. steel. UL listed, CSA certified, and meet NEMA 1 standards for indoor use.

Raceway sections have four 1/4″ dia. mounting holes (10-ft. lengths have six) for wall or ceiling mounting. The cover is secured to the body with screws (included). *10-ft. raceway section* has two overlapping covers. **To Order:** Please specify raceway with or without knockouts; those with knockouts have combination 1/2″ and 3/4″ trade size and combination 1″ and 1 1/4″ trade size knockouts.

A ***connector*** is required to join components except the end flange. Each connector has a swing gate for easy access and includes connecting hardware. ***90° elbow*** and ***T-junction*** have removable covers. ***End flange*** creates a secure raceway connection to an enclosure or wall. ***End cap*** terminates a raceway or fitting (connecting hardware included). It has a combination 1 1/4″ and 1 1/2″ trade size knockout.

Connector

Wall Hanger

6″ to 4″ Reducer

Ideal for food processing and pharmaceutical environments, raceway and fittings are made of 18-ga. Type 304 stainless steel for great corrosion resistance. All are UL listed and include connecting hardware, except the wall hanger.

Raceway sections have a cover with a 1/4-turn latch that locks it firmly in place. Mount using the ***wall hanger***, which has two 1/4″ dia. mounting holes.

90° elbow with connector and ***T-junction with connector*** have removable covers. ***End flange*** creates a secure raceway connection to an enclosure or wall. ***End cap*** terminates a raceway or fitting.

Multichannel Surface-Mount Indoor PVC Raceway

Three-Channel Raceway

Two-Channel Raceway

With more than one channel, raceway and fittings let you separate power and data wiring to prevent interference. It's easy to install and is perfect for areas where you can't get inside the walls. Designed for use with Category 5, 5E, and 6 data wires, it also meets the 1¼″ bend radius required for fiber optic cable. Components are made of impact- and corrosion-resistant PVC and are flame retardant. Use in applications up to 600 volts. Color is off-white (can be painted for a custom look). UL listed and CSA certified.

Raceway and Accessories

Three Channel— Often used as a main distribution raceway. Raceway section has a snap-on cover for easy access and is 4.5″ Wd. × 1.63″ Dp. If larger channels are needed, just remove the dividers. It must be securely fastened with screws (not included).

Two Channel— Often used for branch circuits in conjunction with the three-channel raceway. Raceway section has a hinged cover for easy access to wiring and is 2.12″ Wd. × 1.04″ Dp. It has an adhesive backing for easy installation in low-voltage applications (less than 50 volts). For applications up to 600 volts, fasten with screws (not included).

Security straps provide support to keep raceway covers closed. ***Wall box adapter*** allows access to single-device (1 gang) outlet boxes that are already in your wall. ***Outlet boxes*** provide easy access to wiring. ***Raised outlet boxes*** accommodate a variety of receptacles and hold them away from the raceway channels for maximum wiring capacity.

4″ Wd. × 4″ Dp. Raceway Section

Connector

90° Elbow

T-Junction

End Cap

Overhead Hanger

Wall Hanger

Constructed from 14-ga. Type 304 stainless steel with oil-resistant gaskets, this raceway is the one to install in environments exposed to washdowns, chemicals, and corrosion. Use to protect and route electrical wiring, cables, and hose. Components are UL listed, CSA certified, and meet NEMA 4X standards for indoor and outdoor protection against corrosion and water projected from a hose.

2½″ Wd. × 2½″ Dp. raceway section has a cover secured by heavy duty hinges on one side and ¼-turn latches on the top to lock it firmly in place. Gaskets are rubber. ***4″ Wd. × 4″ Dp. raceway section*** has a cover secured with heavy duty hinges on one side and screw clamps on the other. Gaskets are polyurethane.

Fittings and Accessories— All include connecting hardware. A *connector* is required to join all components. *End cap* terminates a raceway or fitting. *Overhead* and *wall hangers* can be mounted to the raceway flange in various configurations. *2½″ Wd. × 2½″ Dp. overhead* and *wall hangers* have 25/64″ dia. mounting holes. *4″ Wd. × 4″ Dp. overhead* and *wall hangers* have 9/32″ dia. mounting holes.

Low-Voltage Rollout Raceway

Keep those low-voltage wires (up to 90 VAC/VDC) out of sight the easy and economical way. This raceway comes flat on a roll, ready to be cut to length and easily folded. It has an adhesive backing and is paintable.

Small channel raceway is good for hiding small-gauge wires. It snaps closed and is made of PVC. Color is white. Meets UL 94V0 for flame retardance. ***Large channel raceway*** is good for hiding multiple cables and cords behind workstations and under desks. One surface has an additional adhesive strip for closing. Made of polypropylene. **To Order:** Please specify black or white.

Small Channel Raceway

Large Channel Raceway

Fish Tape

Stainless Steel and Nylon

Pancake

Fish tapes make the job of pushing and pulling wire through conduit much easier. Just attach your wire and "fish" it through.

Steel tape is flat, corrosion-resistant plated steel coiled on a tough plastic reel that has a large handle.

Stainless steel tape is flat and will not rust or corrode, ideal for damp conditions. Comes on a plastic reel with a large handle.

Super flex stainless steel tape is flexible enough for pulling through multiple bends, yet it's stiff enough to push through tough runs without backing up. Tape is stranded, round, and surrounded by a hard nylon jacket. Has an impact-resistant plastic reel with a handle.

Nonconductive nylon tape is safer to use around energized equipment. Use for pushing wire only. Tape is round nylon but has a metal tip. Has a heavy duty plastic reel with a handle.

Pancake steel tape is flat and great for fishing short runs under carpet, down walls, and over ceilings. Small enough to fit in a tool case, the reel is plastic and has a handle with a winding knob.

Length, ft.	Tape Width	Tape Thick.		Each
Steel

Cable Rope Feed Line

Unlike fish tape, this pulling line is lightweight enough to be inserted into your conduit with a blower or vacuum so you can easily guide your pulling rope through. *Note:* Not for directly pulling wire or cable.

1000-ft. roll is made of nylon and has a breaking strength of 85 lbs. Color is white. ***6500-ft. bucket*** has a handle and center hole for easy dispensing. Rope is made of polypropylene and has a breaking strength of 210 lbs. Line is mildew resistant so you can leave it there for future use. Color is white with a blue marking strand.

1000-ft. Roll	5043K3	Each	$22.04
6500-ft. Bucket	5043K2	Each	$45.78

Sure-Clamp Wire and Cable Grips

Standard

Tough with Latch

Pull wire and cable and maintain tension until the line can be permanently anchored. Grips are made of steel. ***Warning:*** Do not use as an anchor.

Standard grips (often used with bare wire) have a smooth jaw that won't dig into and damage wire. Jaws are spring loaded to provide extra tension.

Tough grips provide a more secure grip for wire, cable, and wire rope in applications where marring can be tolerated. Grips ***with latch*** prevent cable from slipping out of the jaws.

Cable Dia. Range	Jaw Length (A)	Work Load Limit, lbs.		Each
Standard				
0.08″-0.2″	3″	1,500	7285K1★	$87.11

★ Knurled on one side.

Fish Tape Leaders

Flexible Leader

Leaders make guiding your steel fish tape and pulling wires through conduit bends easier.

Flexible leader handles up to six 10 AWG bare wires. Use with flat fish tape.

Multi-loop leader has multiple staggered eyelet loops to prevent bunching and hang-ups in tight bends. Use with flat and round fish tape.

	Length		Each
Flexible Leader	12″	6611K62	$16.03
Multi-Loop Leader (4 Loops)	10″	6611K63	16.77
Multi-Loop Leader (6 Loops)	11 1/8″	6611K64	19.26

Fish Tape Puller

The two-piece hinged design allows you to use both hands for twice the pulling force. It also prevents tape kinking, and is safer than using pliers for pulling tasks. Overall length is 11 3/4″.

4861K66 ..... **Each** $35.62

Wire and Cable Push-Pull Rod

Route wire and cable outside of conduit in drop ceilings, attics, crawl spaces, and floors with this adjustable length glow-in-the-dark rod. It is made of nonconductive fiberglass and consists of three 6-ft. threaded sections and two 3-ft. threaded sections. Includes bullet nose eyelet and hook ends for handling wire and cable.

O'all Lg.	Diameter		Each
24 ft.	1/4″	4078K11	$77.99

Cable-Pulling Grips

Standard Duty Single Weave

Midcable Heavy Duty Double Weave

Use these grips to pull one or more cables through conduit. Galvanized steel wire mesh works like a Chinese finger trap, adjusting its grip to the load. The eye flexes to follow the line of pull. For more than one cable, measure the circumference of the bundle and divide by 3.14 to determine the cable diameter range you need. CSA certified.

Can't get at the end of a cable? Just lace on a ***midcable*** pulling grip using the included lacing wire and start your pull.

Light Duty Cable Protectors

Protector with Multipurpose Fitting

Flexible and durable PVC cable protectors protect wire, cord, and cable from foot, cart, and other light traffic. They have a tapered profile that lies flat. Just thread your cable through the channel or slit the underside of the protector with a utility knife and insert the cable. Includes tape with adhesive on both sides for easy installation. For indoor and outdoor use. Not load rated.

Multipurpose fitting fits all sizes and serves as a tee, riser, "L," 4-way, or terminal box. Made of PVC.

To Order: For protectors and multipurpose fitting, please specify beige, black, brown, gray, or yellow.

Heavy Duty Cable Protectors

With aluminum construction and a textured surface, these cable protectors are perfect in environments with heavy pedestrian and equipment traffic. Use in factory, warehouse, and office environments, indoors and out.

Standard protectors have serrations for slip resistance. Work load limit is 10,000 lbs.

Large channel protectors easily span large hose, wire, pipe, and cable. They have a diamond tread surface for safe crossing. Work load limit is 2,000 lbs.

Connectable Cable Protectors

You can make these modular, interlocking protectors as long as needed—simply snap one piece onto another to span sidewalks, roads, and plant floors. Components resist weather and abrasion.

Single Channel

Made of polyurethane with a tread pattern that improves traction.

Medium duty protectors are good for pedestrian and light vehicle traffic. **To Order:** Please specify black or red.

Heavy duty protectors have high work load limits, allowing them to stand up to heavy pedestrian and vehicle traffic. Color is orange.

Drop-over style has an open bottom so it can be dropped right over your cable for fast installation. Lay-in style flexes to allow you to lay your cable into the channel, keeping it off the floor.

PVC Wire Duct

Use for shorter runs of wire and cable, such as those found within electrical enclosures and control panels. A great alternative to cable ties, this PVC duct comes with a cover and meets UL 94V0 for flame retardance. UL recognized, CSA certified, and CE approved, unless noted.

To Order: Please specify length from those listed in the table.

Snap-on Cover

Slotted Duct

Narrow Slotted Duct

Solid Duct

Slotted duct has "fingers" that allow you to direct wires in and out of the duct (just remove them to enlarge the opening size). Has 0.2″ dia. mounting holes. **To Order:** Please specify color: gray or white, unless noted.

Narrow slotted duct is similar to slotted but with smaller slots. Has 0.2″ dia. mounting holes. **To Order:** Please specify color: gray or white.

Solid duct is excellent for continuous runs of wire. Color is gray.

● Available in gray only. ★ Not CSA certified. ■ Length is 6 ft. Not CE approved.

Hinged Cover

Slotted Duct

Solid Duct

Save time when you need frequent access to your wires. The hinged construction also prevents cover loss and secures the sidewalls, making it sturdier than duct with a snap-on cover. Color is gray.

Slotted duct has "fingers" that allow you to direct wires in and out of the duct (just remove them to enlarge the opening size). Has 0.2″ dia. mounting holes. ***Solid*** duct is excellent for continuous runs of wire.

Flexible Polypropylene Wire Duct

If you're tight on space or have a labyrinth of wires, get the duct flexible enough for your needs. The overlapping slotted "fingers" form a cover and allow you to direct wires in and out, so there's no actual cover to remove for access. Duct has an adhesive backing, plus 10 slots for screw mounting. Made of gray polypropylene. Sold in 19 3/4″ lengths.

O'all Size, Wd.×Ht.	Mtg. Hole Dia.		Each

Cable-Support Grips

Grips relieve tension and absorb vibration from vertical, straight runs of cable, rod, and tubing. CSA certified, except optional safety springs.

Single-loop grips are galvanized steel and made for smaller-diameter cable. *Closed-mesh* grips can be supported by a hook. *Closed-mesh grips with locking loop* wrap around a beam or pipe and tighten by the weight of your cable or by manual adjustment. ***Optional safety springs (for single-loop grips)*** relieve tension from sudden strains (and reduce work load limit).

Double-loop grips are tinned bronze. When the loops are equally supported, the load is balanced. Slip *closed-mesh* grips over the end of a cable when accessible. Use *midcable* grips when the end of a cable is not accessible.

Just wrap the mesh around a continuous length of cable and lace it closed with the included lacing wire.

Also Available: Type 302/304 stainless steel double-loop grips. Please ask for 70095K888 and specify closed mesh or midcable grip and cable dia. range.

Cord Grips

As you tighten these fittings, they compress to grip your cord, preventing pull out. All include an outer locknut, a nylon inner ring and a neoprene bushing except ***standard straights***, which do not include a locknut. Temperature range is –30° to +225°F. All are UL listed and CSA certified. Choose from aluminum, zinc-plated steel, and nylon cord grips. **To Order:** Please specify material.

Steel 90° elbows have zinc-plated malleable iron bodies and zinc-plated steel outer locknuts. ***Nylon*** grips are gray. ***Liquid-tight*** cord grips also have a zinc-plated steel locknut and a metal-clad neoprene O-ring for the threaded end to seal panel connections. Rated IP66 and NEMA 4X and 13 for washdowns, corrosion, oil, and coolant resistance.

Note: Trade size is an industry designation for fittings, not an actual measurement. It also designates the NPT (National Pipe Tapered) thread size of the threaded end. When selecting a fitting, match the trade size of your knockout.

Also Available: Additional standard cord grips. Please ask for 7529K888 and specify straight or 90°, trade size, cord diameter range, and material.

Also Available: Locknut/washer kits for standard fittings. Please ask for 7466K88 and specify NPT trade size.

Nylon Liquid-Tight Cord Grips (NEMA 6)

Prevent soggy circuits with these black nylon fittings. The Buna-N rubber bushing and O-ring provide liquid-tight entry for cable, wire, and tubing. Fittings include nylon locknuts, unless noted. Temperature range is –40° to +212°F. Rated NEMA 4X for corrosion protection and NEMA 6 and IP68 for temporary submersion. UL listed (except for 1/4″ and 3/8″ sizes, which are UL recognized), CSA certified, and CE approved. ***Flex*** fittings prevent cable kinking.

Note: Trade size is an industry designation for fittings, not an actual measurement. It also designates the NPT (National Pipe Tapered) thread size of the threaded end. When selecting a fitting, match the trade size of your knockout.

♦ Prices are approximately 15% lower for 10 or more of the same item. ♠ Fits 1/4″ NPT threads. ★ Locknuts are zinc-plated steel.

Nylon Liquid-Tight Cord Grips with Mesh

Nylon construction, a nitrile/PVC bushing, and a neoprene O-ring provide a liquid-tight seal and corrosion resistance. All include a zinc-plated steel locknut. The mesh is nylon and prevents cable kinking. Temperature range is –40° to +221°F. Color is gray. UL listed and CSA certified.

Note: Trade size is an industry designation for fittings, not an actual measurement. It also designates the NPT (National Pipe Tapered) thread size of the threaded end. When selecting a fitting, match the trade size of your knockout.

Nickel-Plated Brass Liquid-Tight Cord Grips

Straight Flex

Use these nickel-plated brass fittings in up to 300 feet of water, underground, and in other locations where protection from corrosion is a must. Fittings have a Buna-N seal and O-rings for a liquid-tight connection and include a nickel-plated brass locknut. Temperature range is –40° to + 212° F. Rated IP68 for protection from water submersion. UL listed, unless noted. CSA certified and CE approved.

Note: Trade size is an industry designation for fittings, not an actual measurement. It also designates the NPT (National Pipe Tapered) thread size of the threaded end. When selecting a fitting, match the trade size of your knockout.

EMI-proof cord grips are for use with cables that have braided shields to protect wires from electromagnetic interference (EMI). ***Flex*** cord grips have a dome nut with a spring extension to provide additional strain relief and to prevent the cable from kinking.

PG- and Metric-Thread Liquid-Tight Cord Grips

Polyamide

Nickel-Plated Brass

Offered with PG (European standard) or metric male threads, these liquid-tight fittings have neoprene bushings and Buna-N O-rings. All are CE approved.

Polyamide cord grips are flame retardant, self extinguishing, and resistant to salt water, oil, and grease. They are gray and include a polyamide locknut. Temperature range is –4° to +176° F. UL listed, unless noted. CSA certified.

Nickel-plated brass cord grips are IP68 rated for protection from water submersion. They include a nickel-plated brass locknut. Temperature range is –22° to +212° F. Cord grips with *metric threads* are UL and C-UL listed.

Aluminum Liquid-Tight Cord Grips with Stainless Steel Mesh

Straight 90° Elbow

Bring on your toughest cord bending and tugging applications. These aluminum fittings have a corrosion-resistant stainless steel mesh to provide additional strain relief by controlling the arc of the cable bend. They also have O-rings made of neoprene clad with zinc-plated steel and include a zinc-plated steel locknut. All meet Class I, Div. 2; Class II, Div. 1 and 2; and Class III, Div. 1 and 2 standards for use in hazardous locations. Temperature range is –30° to +225° F. UL listed and CSA certified.

Note: Trade size is an industry designation for fittings, not an actual measurement. It also designates the NPT (National Pipe Tapered) thread size of the threaded end. When selecting a fitting, match the trade size of your knockout.

Stainless Steel Liquid-Tight Cord Grips

Straight Straight with Mesh

Made of Type 304 stainless steel for use outdoors and in other corrosive environments, these fittings provide a seal against dirt, moisture, coolant, and corrosive fumes. All include a neoprene bushing, Buna-N O-ring, and zinc-plated steel locknut (Type 304 stainless steel locknuts are sold separately). Temperature range is –30° to +240° F. Rated IP67 for temporary water submersion. Cord grips are UL listed.

Note: Trade size is an industry designation for fittings, not an actual measurement. It also designates the NPT (National Pipe Tapered) thread size of the threaded end. When selecting a fitting, match the trade size of your knockout.

Straight cord grips with mesh have Type 302 stainless steel mesh to provide additional strain relief by controlling the arc of the cable bend.

★ Comes with a zinc-plated locknut.

High-Temperature Liquid-Tight Cord Grips

If you're running cords in a hot, wet environment, choose one made of chemical-resistant PVDF to withstand temperatures from –31° to +302° F. Fittings include a nickel-plated brass locknut and fluoroelastomer rubber bushing and O-ring. Color is white. They meet IP68 for protection from water submersion. UL listed, unless noted. CSA certified and CE approved.

Note: Trade size is an industry designation for fittings, not an actual measurement. It also designates the NPT (National Pipe Tapered) thread size of the threaded end. When selecting a fitting, match the trade size of your knockout.

● UL recognized; not UL listed.

Multidiameter Liquid-Tight Cord Grips

Get the perfect fit for a variety of cord diameters. Each hole in the special EPDM rubber insert has layers that you can peel away to custom fit each cord. The insert is split into upper and lower halves, so you can install your cords even if they already have connectors attached. Maximum panel thickness is 0.16″. Temperature range is –40° to +176° F. All meet IP67 for temporary water submersion and NEMA 4X and 13 for washdowns, corrosion, and oil and coolant protection. UL listed.

Replacement inserts make it easy to change cord sizes and configurations.

Circular

For Four Cords

Save space and simplify installation. To install, just thread the outer housing into a 2.5″-2.52″ diameter knockout, pull your cords through, then add the insert, adapting each hole in the insert to the cords. Fittings accommodate cords in the diameter ranges listed.

Nickel-plated brass fittings include a nickel-plated brass locknut. ***Type 316 stainless steel fittings*** include a Type 316 stainless steel locknut.

Rectangular

For 10 Cords

Rectangular yet well-rounded, these multicord fittings give you the most versatility. To install, mount the frame into a 7.36″ Lg.×2.80″ Wd. cutout in your panel, pull your cords through, then adapt each hole in the insert to the cords. Overall size is 9.21″ Lg.×3.66″ Wd.×1.65″ Dp. They have an NBR rubber gasket.

Low Moisture-Absorption Liquid-Tight Cord Grips

Low moisture absorption plus good chemical resistance make these liquid-tight fittings a great choice for outdoor, abusive environments. They are made of black thermoplastic polyester and include a neoprene bushing, zinc-plated steel locknut, and Buna-N O-ring. Temperature range is –30° to +240° F. Rated IP68 for protection from water submersion. UL listed and CSA certified.

Note: Trade size is an industry designation for fittings, not an actual measurement. It also designates the NPSM (National Pipe Straight Mechanical) thread size of the threaded end. When selecting a fitting, match the trade size of your knockout.

Wide Range Heat Shrink-Sealed Liquid-Tight Cord Grips

Adhesive-lined, heat-shrinkable polyolefin on the cable-entry side provides a liquid-tight, fume-tight seal on a wider cord range than other grips. Just apply heat using a heat gun to seal. Shrink temperature is 250° F. Fittings screw into themselves for quick fastening to your enclosure. Made of black plastic. Temperature range is –67° to +194° F.

Snap-In Cord Grips

Quickly relieve cord strain in applications that don't require a moistureproof seal. To install, just snap these black nylon fittings onto your cord and push into your panel. Installation pliers (sold separately) make it easier to insert the cord grip into the panel. Maximum temperature is 221° F. UL recognized and CSA certified.

Flex fittings prevent your cord from kinking and further reduce strain by controlling the arc of the cable bend.

Liquid-Tight Cord Grips for Multiconductor Building Cable

A Buna-N bushing with an oval slot provides liquid-tight entry for both Romex-jacketed cable (NEC Type NM-B) and Romex-jacketed underground feeder cable (NEC Type UF-B). These black nylon fittings resist corrosion and are suitable for direct-burial installations. Both include a Buna-N O-ring and nylon locknut. Temperature range is –40° to +212° F. Rated IP68 for protection from water submersion. UL recognized and CSA certified.

1/2″ NPT size fits NM-B Romex 14/2, 14/3, 12/2, and 12/3 AWG cable, and UF-B Romex 14/2, 12/2, and 10/2 AWG cable.

3/4″ NPT size fits NM-B Romex 12/2, 12/3, and 10/2 AWG cable, and UF-B Romex 14/3 and 12/3 AWG cable.

Note: Trade size is an industry designation for fittings, not an actual measurement. It also designates the NPT (National Pipe Tapered) thread size of the threaded end. When selecting a fitting, match the trade size of your knockout.

Trade Size, NPT	Slot Size		Each 1-9	Each 10-Up
1/2″	0.24″×0.55″	7935K11	$4.21	$3.49
3/4″	0.24″×0.55″	7935K12	5.51	4.57

Metric-to-NPT Thread Adapters

Here's the solution when you want to install an NPT-threaded connector into a metric-threaded hole. Adapters are made of nickel-plated brass with a Buna-N O-ring. Temperature range is –40° to +212° F.

Thread Size Metric Male	Thread Size NPT Female	Metric Thread OD		Each 1-9	Each 10-Up
M16×1.5	1/2″	0.63″	7537K1	$8.46	$7.19

About NEMA and IP Enclosure Ratings

NEMA Ratings— NEMA (National Electrical Manufacturers Association) has a standard, NEMA 250-2003, to designate the degree of protection provided by electrical enclosures.

Environments:	NEMA 1	NEMA 3R	NEMA 4	NEMA 4X	NEMA 5	NEMA 6	NEMA 6P	NEMA 7	NEMA 9	NEMA 12	NEMA 13
Indoor use only	✓				✓		✓	✓	✓	✓	
Indoor and outdoor use		✓	✓	✓		✓	✓				
Falling liquids and light splashing		✓	✓	✓		✓	✓			✓	✓
Nonhazardous dust, lint, fibers			✓	✓	✓	✓	✓			✓	✓
Washdowns and splashing water			✓	✓		✓	✓				
Oil and coolant seepage										✓	✓
Oil and coolant spraying and splashing											✓
Corrosive agents				✓			✓				
Occasional temporary submersion						✓	✓				
Occasional prolonged submersion							✓				
Prevention of external hazard from internal explosion								✓			
Prevention of combustible dust ignition									✓		

IP Ratings— The IEC (International Electrotechnical Commission) developed their own IP (Ingress Protection) Standards, IEC 60529, for the degree of protection provided by enclosures. IEC designations consist of the letters "IP" followed by a two-digit number:

First Digit— Protection from entry of solid foreign objects:

1— Protection from solid objects greater than 50 mm dia.
2— Protection from solid objects greater than 12.5 mm dia.
4— Protection from solid objects greater than 1 mm dia.
5— Protection from dust that would interfere with equipment operation
6— Dust tight

Second Digit— Protection from harmful entry of water:

0— No protection
2— Protection from vertically dripping water
4— Protection from splashed water
5— Protection from water projected from a nozzle
6— Protection from heavy seas or power jets of water
7— Protection from temporary submersion
8— Protection from continuous submersion

Indoor Steel Enclosures with Hinged Cover (NEMA 1)

If you need to enclose components indoors where dust and oil aren't an issue, these enclosures have got it covered—complete with steel hinges and a 1/4-turn coin-slot latch. Made of 16-ga. steel, unless noted. UL listed and CSA certified. For outlet and switch boxes, see pages 830-831.

Standard

All have four 1/4″ dia. mounting holes, unless noted. Working depth (area available for component mounting) is approximately 1/2″ less than overall depth. Opening size is approximately 1″ less than overall height and width.

To Order: For choose-a-color enclosures, please specify black, blue, white, or yellow.

Panels are for mounting components inside and are made of steel.

Indoor Steel Enclosures with Lift-Off Cover (NEMA 1)

Versatile and economical, these are great for indoor applications that don't require dust- or oil-tight enclosures. No need for special tools to punch holes—knockouts in the top, bottom, and sides save you time. Plus, the quick-access cover comes off without removing the screws—just slide it off the keyhole shaped slots. All are 16-ga. steel, unless noted, and have four ¼″ dia. mounting holes. Color is gray. UL listed and CSA certified. For outlet and switch boxes, see pages 830-831.

● 14-ga. steel.

Oil-Spray-Tight Indoor Steel Enclosures (NEMA 13)

Enclosures are rated NEMA 13 for indoor use to provide protection from dust, dirt, and splashing and spraying oil/coolant. Made of 14-ga. steel with gray powder-coated finish, unless noted. They are also known as JIC (Joint Industrial Council) boxes, unless noted. UL listed.

With Lift-Off Cover

The cover has a nitrile/PVC gasket and is secured with screw clamps on one side; good where frequent access isn't required. Enclosures have four 5/16″ dia. mounting holes. Working depth (area available for component mounting) is approximately ½″ less than overall depth. Opening size is approximately ¾″ less than overall height and width. CSA certified.

Panels are for mounting components inside and are made of steel.

♣ Does not meet JIC requirements. ♠ 16-ga. body and 14-ga. cover.

With Hinged Cover

Standard with Screw Clamps

Standard with Quick-Release Latch

Large with Screw Clamps

A continuous steel hinge on the cover makes these enclosures ideal when you need frequent access. Covers have a neoprene gasket. ***Panels*** are for mounting components inside and are made of steel.

Standard enclosures have a working depth (area available for component mounting) of approximately 0.5″ less than the overall depth. Opening size is approximately 1.2″ less than overall height and width. All have four 5/16″ dia. mounting holes. *Standard with quick-release latch* provide quick, convenient access because there are no screws or clamps to unfasten.

Large enclosures have a rolled lip around three sides of the cover and all sides of the enclosure opening to keep liquids and contaminants out. The cover is removable. Enclosures have a hasp for padlocking (padlock not included; ⅜″ max. shackle dia.) and four 7/16″ dia. mounting holes. Working depth (area available for component mounting) is approximately 2.1″ less than the overall depth. Opening size is approximately 1.8″ less than overall height and width. CSA certified.

Rain-Tight Outdoor Steel Enclosures (NEMA 3R)

Much like the roof of your house, the drip-shield top keeps rain out, as well as dirt and light splashing. No gasket required. They have a gray powder-coated finish. UL listed and CSA certified, unless noted.

With Lift-Off Cover

Enclosures have knockouts on the bottom for attaching conduit and cord-grip fittings. Unless noted, all can be secured with a padlock (not included; 3/8" max. shackle dia.). They have two screws to hold the cover in place, unless noted. Opening size is 1 1/8" less than overall height and width. All are 16-ga. steel and have four 1/4" dia. mounting holes, unless noted.

Overall Size, Ht. × Wd. × Dp.	Knockout Style (No.)		Each	Overall Size, Ht. × Wd. × Dp.	Knockout Style (No.)		Each

★ Not UL listed and cannot be secured with a padlock. Has one cover screw and two mounting holes.

With Hinged Cover

A continuous steel hinge provides easy access to the inside of these enclosures, where you'll find a removable inner panel for mounting components. They have 5/16" Ht. × 9/16" Wd. mounting slots (those with knockouts have four; those without have six).

Enclosures with knockouts let you attach conduit and cord grip fittings to the bottom. Enclosures have a quick-release padlockable latch (padlock not included; 5/16" max. shackle dia.). Working depth (area available for component mounting) is approximately 1/2" less than the overall depth, opening size is approximately 1 5/8" less than overall height and 1 1/8" less than overall width, and panel height and width are 1 3/4" less than overall height and width. Made of 16-ga. steel.

Enclosures without knockouts have two screws to secure the cover. Hasp accommodates a padlock (padlock not included; 7/16" max. shackle dia.). Working depth is approximately 1" less than the overall depth, opening size is approximately 2 3/4" less than overall height and width, and panel height and width are 3" less than the overall height and width. Made of 14-ga. steel.

Contemporary Washdown Indoor/Outdoor Steel Enclosures (NEMA 4)

Make your enclosures stand out or blend in, indoors or out. Smooth lines and a choice of colors make these great for high-traffic areas. Rated NEMA 4 and 12 for protection from dust, splashing water, washdowns, and oil/coolant dripping. Made of 16-ga. steel with concealed steel hinges, unless noted. Cover has a polyurethane-foam gasket and a 1/4-turn coin-slot latch. Working depth is 1.2" smaller than overall depth and opening size is approximately 1.6" less than overall height and width, unless noted. Enclosures have four 1/2" dia. mounting holes, unless noted. UL listed and CSA certified.

To Order: For choose-a-color enclosures, please specify black, blue, white, or yellow.

Panels are for mounting components inside and are made of steel.

Optional locking handles replace the 1/4-turn coin-slot latch and include two keys.

■ Working depth is 0.5" smaller than overall width, opening size is 0.7" less than overall height and width, and has 1/4" mounting holes. ♠ 16-ga. body and 14-ga. cover. ● 14-ga. steel.

Washdown Indoor/Outdoor Steel Enclosures with Window (NEMA 4)

Lose the X-ray goggles and see inside these enclosures through their polycarbonate window. Use them indoors and out; rated NEMA 4 and 12 for protection against dust, splashing water, washdowns, and oil/coolant dripping. Enclosures are made of gray powder-coated 16-ga. steel, unless noted. They have a urethane-gasketed cover with a 1/4-turn coin-slot latch and concealed stainless steel hinges. Working depth (area available for component mounting) is approximately 1" less than overall depth. Opening size is approximately 1 5/8" less than overall height and width. All have four 1/2" square mounting holes.

Panels are for mounting components inside and are made of steel. *Swing panels* are hinged for easy access to internally mounted equipment. They allow 4" to 6" depth adjustment and secure with included 1/4-turn fasteners.

Washdown Indoor/Outdoor Steel Enclosures with Hinged Cover (NEMA 4)

Standard

Large

Hinged to allow frequent access and rated NEMA 4 and 13 to shut out dust, splashing water, washdowns, and oil/coolant spraying, these enclosures are for use indoors and out. They have a continuous hinge and a gray powder-coated finish. Cover has a neoprene gasket and secures with stainless steel screw clamps on three sides. Made of 14-ga. steel, unless noted. UL listed and CSA certified.

Standard enclosures have a steel hinge. Working depth (area available for component mounting) is approximately 0.5″ less than overall depth and opening size is approximately 1.2″ less than overall height and width. They have four 5/16″ dia. mounting holes.

Large enclosures have a removable cover with a stainless steel hinge. Also known as JIC (Joint Industrial Council) boxes, unless noted. They have a padlockable hasp (padlock not included; 5/16″ max. shackle dia.). Working depth (area available for component mounting) is approximately 0.9″ less than overall depth and opening size is approximately 1.8″ less than overall height and width. Enclosures have four 7/16″ dia. mounting holes.

Panels are for mounting components inside and are made of steel.

♦ 16-ga. steel. ♥ 16-ga. body and 14-ga. cover. Does not meet JIC requirements.

Washdown Indoor/Outdoor Steel Enclosures with Lift-Off Cover (NEMA 4)

For occasional access but 'round-the-clock protection from dust, splashing water, washdowns, and oil/coolant spraying, these NEMA 4 and 13 rated enclosures are your best choice, indoors and out. Also known as JIC (Joint Industrial Council) boxes, they have a gray powder-coated finish and a cover with a urethane gasket that secures with stainless steel screw clamps on all four sides. Made of 14-ga. steel, unless noted. Working depth (area available for component mounting) is approx. 0.5″ less than overall depth and opening size is approx. 0.75″ less than overall height and width. They have four 5/16″ dia. mounting holes. UL listed and CSA certified.

Panels are for mounting components inside and are made of steel.

Washdown Stainless Steel Enclosures (NEMA 4X)

If your components must battle dirt, washdowns, corrosion, or oil/coolant dripping, stainless steel is the weapon of choice—and these enclosures are stainless steel all the way down to their hinges. They're rated NEMA 4X and 12 for use indoors and out and are UL listed.

Panels are for mounting components inside and are made of steel.

With Flat Top

Standard Large

Also known as JIC (Joint Industrial Council) boxes, their cover secures on three sides with screw clamps. CSA certified. ***Standard*** enclosures are made of 16-ga. Type 304 stainless steel and have a neoprene-gasketed cover. Working depth (area available for component mounting) is 1/2″ less than overall depth and opening size is 3/4″ less than overall height and width. They have four 5/16″ dia. mounting holes. ***Large*** enclosures are made of 14-ga. Type 304 stainless steel and have a polyurethane-gasketed cover. Working depth is 1″ less than overall depth and opening size is 2 3/4″ less than overall height and width. They have four 7/16″ dia. mounting holes.

With Sloped Top—NSF Certified

A 20° sloped top and door edge allows washdown solutions to run off, eliminating standing water to meet NSF criteria C-2 certification. They also meet IP66 for protection from power jets of water. Made of 14-ga. Type 304 stainless steel. Cover is removable and has a polyurethane gasket and stainless steel 1/4-turn coin-slot latches. Working depth (area available for component mounting) is 1″ less than overall depth and opening width is approximately 2.8″ less than overall width. Enclosures have four 1/2″ dia. mounting holes. C-UL listed.

Standoff kit includes four standoffs that create space between the enclosure and wall to allow for more thorough washdowns.

For information about NEMA and IP enclosure ratings, see page 843.

Tamper-Resistant Washdown Stainless Steel Enclosures (NEMA 4X)

Keep your indoor and outdoor components away from the wrong hands, as well as from dirt, washdowns, corrosion, oil/coolant dripping, and power jets of water. Key-operated pin locks prevent unauthorized entry. All have one lock (unless noted) and are furnished with one key (all open with the same key). Rated NEMA 4X and 12, as well as IP66. Enclosures are made of 16-ga. Type 304 stainless steel (unless noted) and have a urethane-gasketed removable cover with stainless steel hinges. They have four 1/2″ dia. mounting holes with sealing washers. Working depth (area available for component mounting) is 15/16″ less than overall depth. Opening size is approximately 2 7/16″ less than overall height and width. A steel inner panel is included (panel height and width are approximately 1 13/16″ less than enclosure height and width). UL listed and CSA certified.

Contemporary Washdown Stainless Steel Enclosures (NEMA 4X)

Smooth lines and Type 304 stainless steel construction provide the perfect combination of beauty and brawn. These enclosures protect contents indoors and out from dirt, washdowns, and corrosion (rated NEMA 4X), as well as power jets of water (rated IP66). Covers have polymide hinges and a 1/4-turn coin-slot latch. All have a urethane gasket and are made of 16-ga. stainless steel, unless noted. They have four 1/4″ dia. mounting holes (unless noted) and four mounting feet with 9/32″ Ht. × 27/32″ Wd. mounting slots. UL listed and CSA certified.

Enclosures up to and including 14″ wide have a working depth (area available for component mounting) of 0.2″ less than overall depth and an opening size of 0.7″ less than overall height and width. Enclosures 16″ and wider have a working depth of 0.3″ less than overall depth and an opening size of approximately 2.5″ less than overall height and width. ***Panels*** are for mounting components inside and are made of steel.

Also Available: Type 316 stainless steel enclosures. Please ask for 6942K888 and specify the part number of the corresponding enclosure from the listing below.

■ Mounting hole dia. is 1/4″. Mounting bosses for DIN rail have M6 threads.

Contemporary Corrosion-Resistant Washdown Fiberglass Enclosures (NEMA 4X)

Streamlined to blend in well in the office or the plant, these gray enclosures are stronger than polycarbonate, but not as strong as stainless steel. They protect contents from dirt, water, corrosion, and oil/coolant dripping both indoors and out (rated NEMA 4X and 12). Enclosures have a polyurethane-gasketed cover. Screws, hinges, and latches are stainless steel. Working depth (area available for component mounting) is approximately 0.7″ less than overall depth. Opening size is approximately 0.5″ less than overall height and width. Enclosures have four 1/4″ dia. mounting holes (or choose the optional flange-style mounting feet, sold separately, to aid installation). UL and C-UL listed. CSA certified.

Lift-Off Cover — Four captive screws hold cover in place. ***Hinged Cover with Padlockable Latch*** — Have a hasp that accommodates 3/8″ max. shackle dia. (padlock not included). ***Hinged Cover with 1/4-Turn Latch*** — Latch is coin-slot style. ***Hinged Cover with Window*** — Have two captive screws for closing. Window is acrylic.

Panels are for mounting components inside and are aluminum.

For information about NEMA and IP enclosure ratings, see page 843.

Corrosion-Resistant Washdown Fiberglass Enclosures (NEMA 4X)

Not as strong as stainless steel, yet stronger than polycarbonate, these fiberglass enclosures protect contents from dirt, water, and corrosion both indoors and out. ***Panels*** are for mounting components inside.

Without Window

You'll have plenty of room for mounting larger instruments and controls, plus you'll get protection from oil/coolant dripping (rated NEMA 4X and 12). The cover has a polyurethane gasket, stainless steel hinges and twist latches, and a padlock hasp (padlock not included; 1/4″ max. shackle dia.). Enclosures have four 1/2″ dia. mounting holes with flange-style mounting feet. Working depth (area available for component mounting) is approx. 1.6″ less than overall depth. Opening height is approx. 6″ less than overall height and width is approx. 5″ less than overall width. Color is gray. UL and C-UL listed.

Panels are aluminum.

With Window

Standard w/ Twist Latch

Standard w/Padlockable Latch

Large with Optional Mounting Feet

A window in the cover makes it easy to check equipment and take meter readings without sacrificing protection from oil/coolant spraying (rated NEMA 4X and 13), unless noted. The cover has a polyurethane foam gasket and the window is polycarbonate, unless noted.

Standard enclosures have stainless steel hinges and four 5/16″ dia. flanged mounting holes. Working depth (area available for component mounting) is approx. 0.8″ less than overall depth. Opening size is approx. 1.3″ less than overall height and width. Color is gray. UL listed and CSA certified (unless noted). Choose from enclosures with a smooth-closing twist latch or a latch for padlocking (padlock not included; 3/8″ max. shackle dia.). *Panels* are aluminum. **To Order:** For enclosures, please specify twist or padlockable latch.

Large enclosures provide extra space for components. Cover has zinc-plated steel hinges and a 1/4-turn slotted latch. Working depth (area available for component mounting) is approximately 1″ less than overall depth. Opening size is approximately 2″ less than overall height and width. Color is beige. Enclosures have four 1/4″ dia. mounting holes (or choose the optional flange-style mounting feet, sold separately, to aid installation). UL and C-UL listed. *Panels* are steel.

Mtg. Feet for Large Enclosures (Set of 4) 2258K88 **Per Set** $38.20

★ Rated NEMA 12 for protection from oil/coolant dripping. Has an acrylic window. UL and C-UL listed.

Corrosion-Resistant Washdown Polycarbonate Enclosures (NEMA 4X)

Impact and corrosion resistant, these polycarbonate enclosures resist chipping and cracking. They're used as insulated electrical junction boxes, terminal wiring boxes, instrument housings, and electrical control boxes. They have internal studs for mounting DIN rail. All have a gray body. UL listed. ***Panels*** are for mounting components inside and are made of steel.

With Lift-Off Cover

Style 1 w/ Opaque Cover

Style 2 w/ Transparent Cover

Style 3 w/ Opaque Cover

Enclosures have a polyurethane gasket, four 3/16″ dia. mounting holes, and corrosion-resistant polyamide cover screws, unless noted. Back panel is steel. Working depth (area available for component mounting) is approximately 0.5″ less than overall depth. Opening size is approximately 0.5″ less than overall height and width.

To Order: Please specify opaque gray or transparent cover, unless noted.

■ Has stainless steel cover screws. ▲ Offered with opaque gray cover only. ● Gasket is TPE.

(Continued on following page)

Corrosion-Resistant Washdown Polycarbonate Enclosures (NEMA 4X)

(Continued from previous page)

With Lift-Off Cover and Knockouts

Knockouts allow for fast and easy connections into these enclosures. Cover has polyamide screws and a thermoplastic elastomer (TPE) gasket. Working depth (area available for component mounting) is approximately 0.5″ less than overall depth. Opening size is approximately 0.5″ less than overall height and width. They have four 3/16″ dia. mounting holes. C-UL listed. **To Order:** Please specify opaque gray or transparent cover.

With Hinged Cover

Offered with a padlockable latch (padlock not included; 3/8″ max. shackle dia.) or a 1/4-turn key lock (includes one key), these enclosures are rated NEMA 13 for protection from oil/coolant spraying. All have a polycarbonate hinge and EPDM cover gasket. Working depth (area available for component mounting) is approximately 0.5″ less than overall depth. Opening size is approximately 0.5″ less than overall height and width. They have four mounting holes with M6 threads.

To Order: Please specify opaque gray or transparent cover.

See-Thru Corrosion-Resistant Washdown Polycarbonate Enclosures (NEMA 4X)

Get a quick inspection of all sides of your installed components with these transparent blue polycarbonate enclosures. They are rated NEMA 4X and 13 for protection from dirt, water, corrosion, and oil/coolant spraying, as well as IP65 for protection from water projected from a nozzle. They also meet UL 94V2 for flame retardance. Enclosures have a lift-off cover with stainless steel screws and a silicone gasket. Opening size is approximately 0.3″ less than overall height and width. They have four 3/16″ dia. mounting holes. UL listed.

Corrosion-Resistant Washdown PVC Enclosures (NEMA 4X)

Protect indoor and outdoor contents from dirt, washdowns, and corrosion—even UV radiation. Also rated NEMA 13 for protection from oil/coolant spraying. All have a PVC-gasketed lift-off cover that's secured by four captive brass screws. Enclosures also include mounting feet, which are removable except on 8261K21 and K24. Color is gray. UL listed, C-UL listed, and CSA certified.

The 4″ and 5″ high enclosures have two 1/4″ dia. mounting holes. Opening size is approximately 0.4″ less than overall height and width.

The 6.9″ high and larger enclosures have four 1/4″ dia. mounting holes. Opening size is approximately 1″ less than overall height and width.

Corrosion-Resistant Washdown ABS Enclosures (Not NEMA Rated)

Protect your indoor components from corrosion and washdowns the economical way. Cover lifts off and has a polyurethane gasket and four polyamide screws. Enclosures have internal bosses for mounting DIN rail. Working depth (area available for component mounting) is approximately 0.5″ less than overall depth. Color is gray. ***Panels*** are for mounting components inside and are made of steel.

Style A have an opening size of approximately 0.8″ less than overall height and width. They have four 3/16″ dia. mounting holes. ***Style B*** have an opening size of approximately 1″ less than overall height and width. They have four 1/4″ dia. mounting holes.

For information about NEMA and IP enclosure ratings, see page 843.

Submersible Indoor/Outdoor Enclosures (NEMA 6 and 6P)

Tested to withstand periodic submersion in water, these enclosures are ready for your wet environment. NEMA 6P enclosures are also rated NEMA 4X for corrosion resistance.

Contemporary Corrosion-Resistant Fiberglass (NEMA 6P/12)

With Screw Cover

With Padlockable Latch

With Twist Latch

With a choice of colors, you can make these fiberglass enclosures stand out or blend in. They're also rated NEMA 12 for protection from oil/coolant dripping. All have polyurethane-gasketed covers with stainless steel hinges. Working depth (area available for component mounting) is approximately 0.8″ less than the overall depth. Opening size is approximately 2″ less than overall height and width. They have four 5/16″ dia. flanged mounting holes. UL and C-UL listed. CSA certified.

To Order: For choose-a-color enclosures, please specify black, blue, red, white, or yellow.

Enclosures with screw cover have two stainless steel captive screws for closing. ***Enclosures with padlockable latch*** have a stainless steel hasp for padlocking (padlock not included; 3/8″ max. shackle dia.). ***Enclosures with twist latch*** have a stainless steel quick-closing latch.

Panels are for mounting components inside and are made of aluminum.

Corrosion-Resistant Fiberglass w/Raised Cover (NEMA 6P/12)

With Twist Latch

Similar to the fiberglass enclosures above but with a raised cover for additional depth. They are also rated NEMA 12 for protection from oil/coolant dripping. All have polyurethane-gasketed covers with stainless steel hinges. Working depth (area available for component mounting) is approximately 0.8″ less than overall depth. Opening size is approximately 2″ less than overall height and width. They have four 5/16″ dia. flanged mounting holes. Color is gray. UL and C-UL listed. CSA certified.

To Order: Please specify latch type: stainless steel padlockable latch (padlock not included; 3/8″ max. shackle dia.) or quick-closing twist latch.

Panels are for mounting components inside and are aluminum.

Steel (NEMA 6/13)

With Flat Cover

Compact design is great for use as a junction box, instrument box, or wiring box. They're also rated NEMA 13 for protection from oil/coolant spraying. Enclosures have a flanged lift-off neoprene-gasketed cover with screws that thread outside the gasket line to prevent leakage. All are made of 16-ga. steel with smooth corners and no welds. Opening size is approximately 0.6″ less than overall height and width, unless noted. They have four 3/16″×1/4″ slotted mounting holes. Color is gray. UL listed and CSA certified.

Enclosures with ***raised cover*** offer additional depth.

Hazardous-Location Aluminum Enclosures (NEMA 7/9)

Engineered to handle indoor and outdoor hazardous locations, these enclosures meet NEMA 7 (Class I, Group B, C, D), and 9 (Class II, Group E, F, G). Also rated NEMA 4 for washdowns. Cover lifts off and includes aluminum screws. Working depth (area available for component mounting) is 6″, unless noted. Opening size is approximately 4.8″ less than overall height and width and wall thickness is 1/2″, except 16.4″ high enclosures, which have an opening size of 5″ less than overall height and width and a wall thickness of 3/4″. All have four 1/2″ Lg.×9/16″ Wd. mounting slots, unless noted. UL listed and CSA certified.

Panels are for mounting components inside and are made of aluminum.

Submersible Polycarbonate Enclosures with Versa-Mount System (NEMA 6P)

For easy and flexible component installation, just mount DIN rails to the internal mounting bosses in these enclosures. The mounting bosses accept No. 10 self-tapping screws. Enclosures also let you adjust the mounting depth with the optional back panel adjustment mounting pads, sold separately below.

Enclosures resist dirt, washdowns, corrosion, oil/coolant spraying, and even periodic submersion in water (rated NEMA 4X, 6P, and 13). They're made of impact-resistant polycarbonate that withstands chipping under tough conditions, indoors and out. Cover has polycarbonate hinges, a neoprene gasket, and four captive screws. Enclosures include four mounting brackets with hardware. Working depth (area available for component mounting) is 1″ less than overall depth. Opening size is approximately 0.5″ less than overall height and 1.5″ less than overall width. All have four 3/16″ dia. mounting holes. Color is gray. UL and C-UL listed.

Panels are for mounting components inside and are made of aluminum. ***35 mm DIN rail*** is cut to size for mounting components inside and includes mounting screws.

Back panel adjustment mounting pads lets you adjust the depth of your back panel to fit the depth of the components you are using (adjusts to nearly the entire depth of the enclosure). You'll get four mounting pads that slide on the T-shaped rails and are held in place by a set screw. Pads have threaded brass inserts for attaching to the panel. Mounting hardware included. Add the ***quick-release latch*** for easy opening and closing. Reduces the NEMA rating to 4X, making it great for washdown environments but not submersion. Made of stainless steel. Mounting hardware included.

Also Available: Pole-mount adapter. Please ask for 5376K9 and specify enclosure part number and pole diameter (2″, 3″, or 4″).

EMI/RFI Shielded Steel Enclosures

Protect equipment from electromagnetic interference (EMI) and radio frequency interference (RFI). Enclosures are rated NEMA 13 for indoor use to provide protection from dust, dirt, and oil/coolant spraying. Also known as JIC (Joint Industrial Council) boxes, they have a cover with a continuous steel hinge and a neoprene gasket covered with a plated steel mesh. Enclosures secure on three sides with screw clamps. Working depth (area available for component mounting) is approximately 1/2″ less than the overall depth. Opening size is approximately 5/8″ less than overall height and width. Made of 14-ga. steel, unless noted. Enclosures have four 5/16″ dia. mounting holes. All have a gray zinc plated finish. UL listed and CSA certified.

Panels are for mounting components inside and are made of steel.

Create-a-Box Custom Aluminum Enclosures

Choose an enclosure body from the sizes listed and two matching end panels to make your own dust-tight or water-tight enclosure. Enclosure bodies are aluminum and can be cut along (C) dimension (drilling and tapping new holes on one end is required for water-tight bodies). Integral guide rails make these enclosures great for printed circuit boards.

End panels require four mounting screws for securing to the enclosure body. *Dust-tight* panels are aluminum and provide IP40 dust-tight protection. Panels for 2.6″ Ht. enclosures require M3 × 6 mm self-tapping flat head screws. Panels for 3.8″ Ht. and 6.3″ Ht. enclosures require M4 × 16 mm flat head screws. Mounting screws are not included. *Water-tight* panels are die cast aluminum. They include four mounting screws and a neoprene gasket to provide IP65 protection against water projected from a nozzle.

Extra-Large Floor-Mount Steel Enclosures

These 12-ga. steel enclosures have heavy duty lifting eyes, a neoprene gasket, a steel continuous hinge, and a welded-on 12″ high floor stand. Working depth is approximately 1″ less than overall depth. Color is gray. UL listed and CSA certified.

Oil-tight indoor (NEMA 12) enclosures have a key-locking handle and two keys.

Washdown indoor/outdoor (NEMA 4) enclosures have stainless steel clamps on each door to ensure a water-tight seal and a hasp for padlocking (padlock not included; 5/16″ max. shackle dia.).

Panels are for mounting components inside and are made of steel.

Steel Wiring Trough Enclosures

Oil Tight

Rain Tight

Built to house runs of control and power cable, these enclosures have a gray powder-coated finish. All have four 1/4″ dia. mounting holes. UL listed and CSA certified.

Oil-tight indoor (NEMA 12) enclosures are made of 14-ga. steel and protect from oil/coolant dripping. They're also rated IP55 for protection from water projected from a nozzle. Cover has a neoprene gasket and steel hinges and secures with screw clamps. ***Rain-tight indoor/outdoor (NEMA 3R)*** enclosures are made of 16-ga. galvanized steel, unless noted. Cover lifts off and has steel screws.

Slant-Top Steel Enclosures

With Optional Pedestal and Base

Mount these enclosures on either of two sides, creating a 30° or 60° slanted surface. Install on the floor using the optional pedestal and base, or directly onto a desktop or wall. Rated NEMA 12 for protection from oil/coolant dripping and IP65 for water projected from a nozzle. Made of 14-ga. steel with a gray powder-coated finish. They have a neoprene-gasketed screw-down cover with a continuous steel hinge. UL listed and CSA certified.

Optional ***pedestal*** is 14-ga. steel with mounting flanges, mounting hardware, and gasketed access plate. Optional ***pedestal base*** is 7-ga. steel with leveling screws and four 5/16″ dia. holes for bolting to the floor.

Push-Button Slant-Top Enclosures

Two Holes (2×1)

10 Holes (5×2)

With Optional Pedestal and Base

Just like the Slant-Top Steel Enclosures on this page, mount these console-style steel enclosures at a 30° or 60° angle, plus they have holes for push-buttons, switches, and indicating lights. Install on the floor using the optional pedestal and base, or directly onto a desktop or wall. Rated NEMA 13 for indoor protection from oil/coolant spray when used with NEMA 13 rated switches. Cover lifts off and has a neoprene gasket and captive screws. Enclosures are 14-ga. steel with a gray powder-coated finish and have four 3/16″×1/4″ slotted mounting holes. UL listed and CSA certified.

Optional ***pedestal*** is 14-ga. steel with mounting flanges, mounting hardware, and gasketed access plate. Optional ***pedestal base*** is 7-ga. steel with leveling screws and four 5/16″ dia. holes for bolting to the floor.

Push-Button Enclosures

Steel Six Holes (2×3)

Fiberglass Three Holes (1×3)

Holes are already cut for easy switch installation. The cover lifts off and has captive screws, unless noted. NEMA ratings apply when used with equivalently rated switches.

Oil-tight steel enclosures (NEMA 13) provide protection indoors from dust, light splashing, and oil spray. Made of 14-ga. steel with a gray powder-coated finish, unless noted. Units with *22 mm (0.89″) dia. holes* have nitrile/PVC-gasketed covers and are UL listed and CSA certified. Units with *30 mm (1.20″) dia. holes* have polyurethane-gasketed covers and are UL and C-UL listed. ***Corrosion-resistant stainless steel enclosures (NEMA 4X)*** are rated for washdowns and corrosion, indoors and out. Made of Type 304 stainless steel. 14-ga., unless noted. Cover has a neoprene gasket. UL listed and CSA certified. ***Corrosion-resistant fiberglass enclosures (NEMA 4X/6P/12)*** protect from washdowns, corrosion, oil/coolant dripping, and periodic submersion in water, indoors and out. Made of fiberglass-reinforced polyester. Cover has a polyurethane gasket. Color is gray. UL and C-UL listed.

★ 16-ga. steel. ▲ Has a hinged cover. ♦ Cover is 16 ga.

For information about NEMA and IP enclosure ratings, see page 843.

Oil/Water-Tight Hole Plugs (NEMA 4/13)

An oil-resistant gasket provides a tight seal for unused push-button holes or knockouts to protect against dust, dirt, oil, and water. Use on walls up to 0.31″ thick. All are rated NEMA 13 for protection from oil/coolant spray. UL recognized and CSA certified.

Galvanized steel plugs are 16-ga. with a gray powder-coated finish and neoprene gasket. They're suitable for washdown-rated (NEMA 4) enclosures. ***Type 304 stainless steel*** plugs are 16-ga. with an EPDM gasket. Suitable for corrosion-resistant (NEMA 4X) enclosures.

Corrosion-Resistant Fiberglass Hole Plugs (4X/6P)

For your outdoor enclosures and boxes, as well as those in washdown and corrosive environments, use these fiberglass plugs to seal knockouts and holes. They meet IP68 for protection against continuous submersion and provide superior corrosion and UV resistance. A reducer bushing lets you use the plug in various trade sizes while an EPDM gasket protects against dust and submersion. Use on walls up to 1/4″ thick. Color is gray. UL recognized.

Enclosure Vents

7066K1 ***7066K2*** ***7066K3*** ***7066K4***

Sometimes damage doesn't come from the outside ... make your enclosure a safe environment for your components. Vents are gray. All except 7066K2 are rated NEMA 4X for washdowns and corrosion and are UL recognized.

Breather vents allow sealed enclosures to breathe, thereby preventing pressure from building up or dropping inside. They thread into themselves, so there's no need for mounting hardware. *Circular* vents are rated IP66 for protection from power jets of water. Use on panels up to 1/2″ thick. Gasket is NBR rubber. CE approved. *Rectangular* vent is for use on panels up to 1/4″ thick. Gasket is EPDM.

Drain vent mounts to the outside of your enclosure to prevent unwanted moisture from building up inside. To install, drill ventilation holes and mounting holes into enclosure. Gasket is EPDM and mounting screws are included.

Style	Material	Panel Cutout Dia.	Depth In Enclosure		Each
Breather Vents

Underground Enclosures

Get easy access to underground services such as electric, water, and telephone. Lighter than all-concrete enclosures, these are made of polymer concrete reinforced with fiberglass. For use in sidewalk and ground/grass applications, enclosures withstand freeze/thaw conditions and occasional vehicular traffic (see load rating below). All are impact and corrosion resistant and nonconductive. The bottom is open to allow for water drainage. You can stack multiple enclosures in deep holes with only one cover (sold separately). Color is gray. UL listed.

Covers include two bolts for attaching to enclosure.

Cover hook makes it easier to lift cover; it's 7″ long and made of electroplated steel.

Overall Size, Lg.×Wd.×Ht.	Inside Size, Lg.×Wd.×Ht.	Load Rating, lbs.	Enclosures	Each	Covers	Each

ABS Electronics Enclosures with Battery Holder and Protective Boot

Enclosure with Optional Protective Boot

Want to enclose electronic instruments that require a power source? These black ABS plastic enclosures have holders for one 9-volt battery (battery not included). Cover lifts off and is secured with included zinc-plated steel screws.

Optional ***protective boots*** are TPE with a built-in stand to protect the enclosure from damage and allow it to stand upright; great if you're using it as an instrument holder. **To Order:** For protective boots, please specify color: black, light blue, dark blue, orange, red, or yellow.

Hand-Held Enclosures

9215K11 and K12

9215K13, K14, and K15

Unique impact- and water-resistant hand-held enclosures are used in many control applications such as mobile control, wireless communication, hand-held lasers, and remote switch controls. Enclosures meet IP65 for protection against water projected from a nozzle. Housing is yellow and made of glass-filled polyamide. The removable front panel is black polyester and has a neoprene gasket. They include wall-mount brackets, mounting screws, and a cord-grip fitting with M20 threads for strain relief (accepts 0.24″ to 0.47″ dia. cord).

Steel Electronics Cabinets

Perfect for housing modem racks, fax and file servers, and other data and networking equipment, these cabinets have vertical rails spaced 19″ apart with holes to accommodate standard 19″ wide components. Cabinets have a lockable rear door, a lockable front door with clear glass window, a roof cable access panel, removable locking sidewalls, and an open base for cable exit as well as ventilation. They have two sets of depth adjustable mounting rails and four leveling feet for uneven floors. Overall capacity is 882 lbs. All are made of steel. Color is light gray.

Shelves can be mounted at any level using the included mounting hardware. Size is 16″ Wd.×20″ Dp. Capacity is 110 lbs.

Telescopic slide makes a shelf fully extendable.

Overall Size, Ht.×Wd.×Dp.	Cabinets	Each	Shelves	Each
47¼″×31½″×31½″	46365T23	$1,301.85	46365T52	$275.94
78¾″×23⅝″×31½″	46365T21	1,340.89	46365T51	277.60
Telescopic Slide	46365T77	Each $137.61		

Dual-Access Easy-View ABS Instrumentation Enclosures (NEMA 12)

These wall-mount indoor enclosures have a cover on the lower chamber for fast access to wiring connections, without having to disturb instrumentation that you install in the upper section (such as an automated boiler control, flowmeter, or irrigation system meter). Enclosures are rated NEMA 12 for protection from oil/coolant dripping and IP65 for protection from water projected from a nozzle.

The upper section has a clear polycarbonate cover that makes it easy to view instrumentation. Cover size is the same as the panel size shown in the table. Housing and hinge are ABS plastic. Enclosures have a push-button latch for easy access and a neoprene-gasketed cover. All are gray and have three 3/16″ mounting holes.

The lower chamber has one PG-9 (9/16″ dia.) and one PG-13.5 (13/16″ dia.) knockout on the bottom and multiple PG-11 (3/4″ dia.) knockouts on the bottom and back, except 9230K16, which has one PG-11 (3/4″ dia.) and one PG-16 (7/8″ dia.) knockout on the bottom and multiple PG-13.5 (13/16″ dia.) knockouts on the bottom and back.

Panels are for mounting instrumentation inside the front of the enclosure and are made of aluminum.

Overall Size, Ht.×Wd.×Dp.	Enclosures	Each	Panels: Ht.×Wd.		Each
6.3″× 6.5″×3.7″	9230K11	$49.28	3.9″× 6.3″	9230K31	$11.76

19″ Wide Steel Electronics Racks

Floor Mount *Wall Mount*

Also known as relay racks, these racks provide easy access to your data communication components. Use where your equipment doesn't need to be enclosed. Racks have rails spaced 19″ apart for mounting standard 19″ wide components. Rails are 11-ga. steel with 10-32 threads (rack screws are included). Racks have a black finish.

Floor-mount racks have an overall capacity of 1600 lbs. *Utility shelf for floor-mount racks* has a vented pattern for air circulation. Capacity is 60 lbs.; size is 5¼″ Ht.×17¾″ Dp. *Optional support base for floor-mount racks* adds stability when heavy equipment is installed in racks.

Wall-mount rack is 18″ deep and has a swinging-gate design so you can access the rear of the rack. Hook-and-loop cable hoops are included for mounting components. Overall capacity is 100 lbs.

Overall Ht.	Usable Mtg. Ht.		Each
Floor-Mount Racks			
72″	66½″	18505T15	$272.18

Steel Electronics Enclosures

Rails to accept standard 19″ wide components and racks are on both the front and back of these 16-ga. steel enclosures. Overall capacity is 800 lbs. They include handles, rubber feet, and 10-32 clip nuts for mounting components. 10-32 screws included. Color is light gray.

Optional aluminum ***solid rear panels*** allow access for repairs and maintenance. Optional aluminum ***front panels*** let you cover up the front area where no components are present. All panels are 1/8″ thick.

Overall Size, Ht.×Wd.×Dp.	Enclosures	Each	Solid Rear Panels	Each

10½″×19″	7648K65	35.15	7648K67	34.74

About Choosing an Electrical Switch

An electrical switch is used to turn power to a device on and off. This occurs when the switch closes or opens a set of contacts within an electrical circuit. The contacts act like a bridge that closes to allow electricity to pass through the circuit.

Switch Style— Choose the style that's right for your application. The following pages include push-button, toggle, rocker, foot switch, limit switch, and relay styles, among others.

Industry Designation— A standard naming convention that describes the contact for each switch.

Number of Poles: Determine the number of circuits you'll need to switch. Each circuit requires at least one set of contacts or "poles." The number of poles on a switch is indicated by the first two letters of the contact type (SP for single pole, DP for double pole, etc.).

A *single throw (ST)* switch is designed to be either open (off) or closed (on) before switching. A switch designed to be open is called normally open (NO), while a switch designed to be closed is normally closed (NC).

A *double throw (DT)* switch can be wired to be normally open or normally closed, offering greater flexibility. Another advantage of a double throw switch is that it can shift power between devices.

For example, in the diagrams at right, **SPST-NO** shows a single circuit that controls one device (a light bulb) and requires a single pole switch. **SPDT** shows a single pole double throw switch used to switch power between two lights. **DPST-NO** shows two circuits that power two light bulbs and require a double pole switch.

Switch Action— Decide if you want the switch to stay on only while you press it, such as your car horn (momentary), or if you want the switch to stay on when released, as with most light switches (maintained). Momentary switches "spring back" and maintained switches "stay switched."

Amp or Load Rating— You need to know how much electrical current will flow through the switch at the voltage of your circuit. You can compute this current if you know the amount of power required by the device you want to control.

For example, you have a 60 watt bulb powered by a 120 volt AC power supply. Use the formula **Current (amps) = Power (watts) ÷ Voltage (volts)** to calculate that the light bulb will draw 0.5 amps of current. You must select a switch with an amp rating higher than 0.5 amps at 120 volts AC. Remember, the required amp rating may change when there is a change in voltage.

Control Voltage— Some switches are activated by pressing a button (physical force), while other switches, such as relays, are activated by applying a voltage (electrical force). Relays need a control voltage (also known as an input or coil voltage) to operate. If your switch requires electrical activation, make sure your system can supply the appropriate voltage. If you need to use multiple relays, you may also want to look at power consumption (the amps or volt-amps drawn by the coil of the relay) to ensure your system can supply the required amount.

Industry Designation (● = Terminal)	No. of Circuits	Before Switching, Circuit Is	No. of Terminals
SPST-NO—Single Pole Single Throw, Normally Open	1	Off	2
SPST-NC—Single Pole Single Throw, Normally Closed	1	On	2
SPDT—Single Pole Double Throw, Can Be Wired Normally Open or Normally Closed	1	1 Off or 1 On	3
 **DPST-NO—**Double Pole Single Throw, Normally Open	2	2 Off	4
 **DPST-NO/NC—**Double Pole Single Throw, 1 Normally Open and 1 Normally Closed	2	1 Off and 1 On	4
 **DPST-NC—**Double Pole Single Throw, Normally Closed	2	2 On	4
 **DPDT—**Double Pole Double Throw, Can Be Wired Normally Open or Normally Closed	2	2 Off or 2 On	6

30 mm Panel Cutout Metal Push-Button Switches

Their durable construction withstands abuse in demanding environments. Body is metal; button is plastic. Switches mount in a 30 mm (1 3/16″) dia. panel cutout and have screw terminal connections. Depth behind panel is 1 3/4″. Rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. UL listed and CSA certified. For replacement contacts and accessories, see 65575K on page 857.

Washdown switches are rated NEMA 4 and 13 for splashing water and oil/coolant spraying.

Corrosion-resistant washdown switches are oil- and watertight as well as rated NEMA 4X for protection from corrosion.

To Order: Please specify button color where necessary.

For information about choosing an electrical switch, see page 855.

30 mm Panel Cutout Premium Metal Switches

Sealed to keep out dirt and other contaminants, these switches have a long operating life. Body is metal; button is plastic (except key switches, which are all metal). Switches mount in a 30 mm (1 3/16″) dia. panel cutout and have screw terminal connections. Depth behind panel is 1 13/16″. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. They're oil- and watertight, meeting NEMA 4, NEMA 13, and IP66. UL listed, CSA certified, and CE marked.

Two-position lever and ***key*** switches prevent the switch from being caught between two positions. Key switches are opened with the same key (keyed alike) and include two keys; turn left to remove. ***Three-position*** switches are off in the center position. ***Illuminated lever*** switches have an input voltage of 120 AC.

To Order: Please specify color where necessary: black, green (Grn), red, or yellow (Yel). For illuminated push-button switches, also specify input voltage: 24 AC/DC, 120 AC, or 240 AC/DC.

Switch labels are black plastic with white letters, unless stated otherwise. **To Order:** Please specify message: Blank (black), Blank (red), Open, Close, Up, Down, Forward, Reverse, On, Off (red with black letters), Off-On, Hand-Off-Auto, Jog, Reset, Run, Start, Start-Stop, Stop (red with black letters), or Emergency Stop (red with black letters).

Palm-Button Switches

With Optional Ring Guard

Designed for machine actuation and other heavy duty applications, these rugged switches are easy to operate, even while wearing gloves. They have spring back (momentary) switch action and screw terminal connections. Rated 6 amps @ 120 volts AC and 2.2 amps @ 120 volts DC with a maximum voltage of 600 AC and 250 DC. Body is metal. Mushroom button is plastic; flat button is metal. Depth behind panel is 1 1/16″. Switches have a 4 5/16″×2 13/16″ plate for mounting on single-device outlet boxes (see 7169K on page 832). They meet NEMA 13 and IP65 for oil and water resistance. UL listed, CSA certified, and CE marked.

Optional ring guards surround the switch to protect the actuator and reduce the chance of accidental actuation.

30 mm Panel Cutout Metal Switch Components

Build the right switch for your environment with an ***actuator*** and a ***contact*** (each sold separately). They mount in a 30 mm (1 3/16″) dia. panel cutout. Rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. UL listed and CSA certified.

Actuators

All have a threaded locknut for panel mounting. **To Order:** Please specify button color where necessary. ***Washdown*** actuators are rated NEMA 4 and 13 for splashing water and oil/coolant spraying. *Key* actuators open with the same key (keyed alike) and include two keys. ***Corrosion-resistant washdown*** actuators are oil- and watertight as well as rated NEMA 4X for protection from corrosion.

For information about choosing an electrical switch, see page 855.

30 mm Panel Cutout Flush-Mount Plastic Push-Button Switches

Shown Installed

Easy to clean and hard to damage, these switches mount flush in a 30 mm (1 3/16″) dia. panel cutout and have screw terminal connections. Depth behind panel is 3 1/16″. Rated 6 amps @ 230 volts AC and 10 amps @ 24 volts DC with a maximum voltage of 500 AC and 110 DC. Switches are oil- and watertight, meeting NEMA 4, 13, and IP65. UL listed and CSA certified. To illuminate your switch, add an incandescent bulb (sold separately).

To Order: Please specify button color.

8230K21

8230K22

Perform multiple switching functions while saving panel space. Switches have a 1 1/2″ square face with plastic buttons and a metal body. They mount in a 30 mm (1 3/16″) dia. panel cutout and have screw terminal connections. Depth behind panel is 4″, except 8230K24 is 2 1/4″. Rated 6 amps @ 120 volts AC and 5.7 amps @ 24 volts DC with a maximum voltage of 600 AC and 250 DC. Switches resist corrosion and are oil- and watertight, meeting NEMA 4X and 13. UL listed and CSA certified.

Multifunction with Indicating Light—Motor Run is illuminated in red. **To Order:** Please specify input voltage: 24 AC or 120 DC.

Heavy Duty Metal Emergency Stop Switches

Panel Mount

Panel Mount with Lockout

Box Mount with Lockout

Push the button to immediately break the circuit and cut off electrical power. All switches have a red plastic mushroom-style button, metal body, and screw terminal connections. UL listed and CSA certified.

Panel Mount and ***Illuminated Panel Mount***—Switches mount in a 30 mm (1 3/16″) dia. panel cutout. Pull to reset. Depth behind panel is 1 13/16″. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. They're oil- and watertight, meeting NEMA 4, NEMA 13, and IP66.

To Order: For illuminated switch, please specify input voltage: 24 AC/DC or 120 AC/DC.

Panel Mount with Lockout and ***Box Mount with Lockout***—Switches latch when you depress the button and can be locked in that position using a lockout or padlock with a 5/16″ shackle dia. (not included). Rated 6 amps @ 120 volts AC and 2.2 amps @ 125 volts DC. They meet NEMA 13 and IP65 for oil and water resistance.

Panel-mount switch mounts in a 30 mm (1 3/16″) dia. panel cutout. Pull to reset. Depth behind panel is 1 7/8″. Maximum voltage is 600 AC and 150 DC.

Box-mount switch has a 4 5/16″×2 13/16″ faceplate that mounts on a single-device outlet box (see 7169K on page 832). Push to reset. Maximum voltage is 600 AC and 250 DC.

22 mm Panel Cutout Metal Switches

Made of metal for long life, these include everything you need to assemble a complete switch. They mount in a 22 mm (7/8″) dia. panel cutout and have screw terminal connections. Depth behind panel is 1 13/16″. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC. Switches are oil- and watertight, meeting NEMA 4, 13, and IP66. UL listed, CSA certified, and CE marked. For replacement contacts, see 9209K accessories on this page.

To Order: Please specify color where necessary. For illuminated switches, also specify input voltage: 24 AC/DC or 120 AC.

22 mm Panel Cutout Plastic Switch Components

Contact Block | Contact Retaining Clip | Locking Ring (Included with Actuator) | Panel Cutout | Switch Label | Actuator

Select an ***actuator*** and a ***contact block kit*** (each sold separately) to build a custom corrosion-resistant switch. They mount in a 22 mm (7/8″) dia. panel cutout and are oil- and watertight, meeting NEMA 4X, NEMA 13, and IP66 (unless stated otherwise).

Actuators

Push-Button: Flush; Flush with Transparent Boot; Projecting; Mushroom; Triangular Mushroom; Twin Start-Stop

Lever: Short; Long

Key

All have a plastic button and body. UL recognized. *Key-to-reset* actuators include two keys.
Illuminated actuators require a contact block kit with LED bulbholder.
Push-button actuators with transparent boot are rated IP67 for temporary water submersion.
Key actuators open with the same key (keyed alike) and come with two keys. Two-position actuator key is removable in the left position. Three-position actuator key is removable in the center position.
To Order: Please specify color where necessary: black, green, red, white (Wh), or yellow (Yel).

22 mm Panel Cutout Plastic Switch Components *(Continued from previous page)*

Accessories (Cont.)

Padlockable cover prevents unauthorized use.

Switch labels are black plastic. *Black* and *red inserts* are engraved with your choice of message (letters are white). **To Order:** Please specify message: Blank, Open, Close, Up, Down, Forward, Reverse, On, Off, Off-On, Hand-Off-Auto, Jog, Reset, Run, Start, Stop, Stop-Start, or Emergency Stop. *Transparent inserts* let you write or print message on a 3/8″×1″ card.

Also Available: Custom labels. Please ask for 7550K97 and specify color (black or red) and message. They have a maximum of two lines, 13 characters per line.

Mounting tool makes it easy to install a 22 mm or 30 mm switch in a crowded panel.

22 mm Panel Cutout Plastic Switches

Made of corrosion-resistant plastic, these complete switches include everything you need. They mount in a 22 mm (7/8″) dia. panel cutout and have screw terminal connections. Depth behind panel is 1 11/16″. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. Switches are oil- and watertight, meeting NEMA 4X, 13, and IP66. UL listed, CSA certified, and CE marked. ***Three-position*** switches are off in the center position.

For accessories, see 22 mm Panel Cutout Plastic Switch Components on this page.

To Order: Please specify color where necessary: black, green, red, white (Wh), or yellow (Yel). For illuminated switches, also specify input voltage: 24 AC/DC or 120 AC.

Mushroom with Guard

The integral contact block in these one-piece plastic switches extends just 1″ behind your panel, saving valuable space. They are NEMA 4X rated for washdowns and corrosion resistance and have an internal PTFE-coated seal to keep dirt and moisture away from the contacts. Switches mount in a 22 mm (7/8″) dia. panel cutout and have screw terminal connections. You can add up to three contacts (sold separately) to control a maximum of eight circuits. Rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 AC and 250 DC. UL and C-UL listed, CSA certified, and CE marked. *Note:* When installing, ensure the panel gaskets are behind the panel.

To Order: Please specify color: black, green, red, or yellow.

22 mm Panel Cutout Emergency Stop Switches

Plastic Pull-to-Reset

Plastic Key-to-Reset

Plastic Turn-to-Reset

High-Vibration Turn-to-Reset

Metal Pull-to-Reset

Pull-to-Reset with Lockout

Metal Turn-to-Reset

Immediately cut power with a single push. These switches meet EN 418 for compliance with European machine directives for emergency stop applications. All stay switched (maintained) and have a red plastic button and screw terminal connections. They mount in a 22 mm (7/8″) dia. panel cutout. Depth behind panel is 1 13/16″. UL listed and CSA certified.

Plastic— Switches are oil- and watertight and corrosion resistant, meeting NEMA 4X, 12, and 13. CE marked.

Standard switches are rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. They also meet IP66. Key-to-reset switches open with the same key (keyed alike) and include two keys.

High-vibration switches have a single-piece construction that prevents the contact from separating from the actuator in high-vibration applications. Rated 3 amps @ 220 volts AC and 1.1 amps @ 110 volts DC with a maximum voltage of 600 AC. They also meet IP65. Illuminated switches have a 24-volt LED bulb.

Metal— Switches are rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC. They're oil-tight, meeting NEMA 13. NEMA 4 and IP65 rated for washdowns, except pull-to-reset with lockout is IP65 rated only. **To Order:** For illuminated switches, please specify input voltage: 24 AC/DC or 120 AC.

Also Available: Emergency stop switch labels. Please ask for 6741K7 and specify switch part number. Labels are yellow plastic.

Also Available: Replacement contacts. Please ask for 6741K8 and specify switch part number.

22 mm Panel Cutout Plastic Knob Selector Switches

Set switches to either spring back (momentary) or stay switched (maintained). They mount in a 22 mm (7/8″) dia. panel cutout and have a 13/16″ dia. selector knob and screw terminal connections. Depth behind panel is 2 13/16″ except 6299T12 is 1 3/4″. Rated 6 amps @ 120 volts AC and 3 amps @ 24 volts DC with a maximum voltage of 500 AC and 250 DC. NEMA 4X and IP66 rated for washdowns and corrosion resistance. UL listed, CSA certified, and CE marked.

Also Available: Replacement contacts. Please ask for 6299T88 and specify normally open or normally closed.

	No. of Circuits	Switch Position: Left	Center	Right	No. of Terminals	Industry Designation

Switch Label (Blank)							6299T17	1.19

For information about choosing an electrical switch, see page 855.

16 mm Panel Cutout Plastic Switches

Mount these corrosion-resistant switches in a 16 mm (5/8″) dia. panel cutout. For removal tools and mounting wrench, see 16 mm Panel Cutout Plastic Switch Components on this page.

Push-Button and ***Illuminated Push-Button***—Switches don't project from panel, protecting them from damage. They have solder terminal connections. Depth behind panel is 1 3/16″. Rated 0.1 amps @ 42 volts AC and DC. *Illuminated* switches have a 2.2-volt DC LED bulb.

Emergency Stop Push-Button, Lever, and ***Key***—Switches are oil- and watertight, meeting NEMA 4, 13, and IP65. Depth behind panel is 1 11/16″. Rated 2.5 amps @ 125 volts AC and 6 amps @ 24 volts DC with a maximum voltage of 250 AC. UL recognized, CSA certified, and CE marked. Three-position switches are off in the center position.

Emergency stop push-button switches meet EN 418 directive for emergency stop applications. They have screw terminal connections.

Lever switches have 0.11″ quick-disconnect/solder terminal connections. To illuminate, add an incandescent bulb up to 60 volts AC (sold separately). **To Order:** For bulb, please specify voltage: 6.3, 14, 28, 48, or 60 AC.

Key switches open with the same key (two included). They have 0.11″ quick-disconnect/solder-terminal connections.

To Order: Please specify button color.

16 mm Panel Cutout Plastic Switch Components

Custom build a plastic switch by selecting an actuator and contact block (each sold separately). They mount in a 16 mm (5/8″) dia. panel cutout and are oil- and watertight, meeting NEMA 4 and 13 and IP65. Rated 2.5 amps @ 125 volts AC and 6 amps @ 24 volts DC with a maximum voltage of 250 AC. UL recognized, CSA certified, and CE marked.

Push-Button Actuators

Square

Rectangular

Round

Actuators can be permanently converted to stay switched (maintained) from springs back (momentary) action. To illuminate, add an incandescent bulb up to 60 volts AC (sold separately).

To Order: Please specify button color: black, green, red, white, or yellow.

Small Square (11/16″ × 11/16″)	65645K13	$15.98
Large Square (15/16″ × 15/16″)	65645K11	16.21

Finger-Touch Switches

An infrared light beam senses the lightest finger contact to switch a circuit on or off. These switches do not require any pressure to operate, easing stress caused by repetitive motion. They stay switched only when touched (momentary), mount in a 30 mm (1 3/16″) dia. panel cutout, and have LEDs that indicate "power on" and "output activated." Housing is sealed, impact-resistant black plastic and has a guard to prevent accidental activation. Overall size is 1 7/16″ Ht. × 2 3/8″ Wd. × 1 11/16″ Dp. Meet NEMA 4X, NEMA 13, and IP66 for use in wet and corrosive environments. UL listed, CSA certified, and CE marked. Rated 7 amps @ 120 volts AC except 72025K94, which has a 150-mA NPN transistor output and is typically used with a programmable logic controller (PLC).

Switches with ***5-pole male connector*** allow you to quickly change out and repair. They have a single-keyway male receptacle with external threads to accept 0.55″ face dia. female plugs with internal threads.

With 6-ft. Cable

Replacement Guard					72025K71	17.17

For information about choosing an electrical switch, see page 855.

Two-Hand Safety Switch System

Simultaneous two-hand touch operation promotes safety when starting machinery. For a complete system, you'll need a safety relay, two palm switches, and two electrical boxes (sold separately).

Palm switch meets OSHA requirements and ANSI standards for machine operator safety. It's plastic with a 2⅜″ dia. gray flat-head button. Depth behind panel is 1¾″. Rated 1 amp @ 250 volts AC and 90 volts DC. It switches two circuits, one from off to on and one from on to off (DPST-NO/NC). Contacts stay switched only when switch is touched (momentary). Operates on 120 volts AC. IP64 rated for protection from splashing water. UL listed and CSA certified.

Safety relay controls the two palm switches. It sends an output when both switches are activated within 0.5 seconds of each other. Self-monitoring circuitry offers double protection—if any part of the system fails, the entire system shuts down until repaired. It switches two circuits from off to on or on to off (DPDT) and is rated 4 amps @ 230 volts AC and 2 amps @ 24 volts DC. It has screw terminal connections, mounts on a 35 mm DIN rail, and operates on 115 volts AC. Overall size is 4½″ Ht.×⅞″ Wd.×3⅞″ Dp. UL listed and CE marked.

Switch guard protects against damage and accidental actuation. You'll need one per switch.

Electrical boxes have a drilled hole for the palm switch and two 5⁄16″ dia. mounting holes (hardware included).

Palm Switch	65945K11	$391.69
Safety Relay	65945K21	309.52
Switch Guard	65945K31	73.71
Electrical Box with One ¾″ Conduit Hub	65945K33	60.45
Electrical Box with Two ¾″ Conduit Hubs	65945K34	63.64

Flush-Mount Stainless Steel Push-Button Switches

Mount flush to your panel for protection against damage. Switches are stainless steel and have 0.11″ quick-disconnect terminals. Depth behind panel is 1 5⁄16″. IP67 rated for temporary water submersion. Rated 5 amps @ 125 volts AC and 24 volts DC with a maximum voltage of 250 AC and DC.

Panel Cutout	Dia.	No. of Circuits	Before Switching, Circuit Is	Switch Action	No. of Terminals	Industry Designation		
16 mm (5⁄8″)	¾″	1	Off or On	Springs Back (Momentary)	3	SPDT	6023T12	$15.38
19 mm (¾″)	⅞″	1	Off or On	Springs Back (Momentary)	3	SPDT	6023T13	16.06
22 mm (⅞″)	1″	1	Off or On	Springs Back (Momentary)	3	SPDT	6023T14	18.01

Compact Harsh Environment Push-Button Switches

Sealed for protection from moisture and debris, these switches also take up less space in your panel than 16 mm switches.

Style A are IP67 rated for temporary water submersion. Rated 6 amps @ 125 volts AC and 6 amps @ 30 volts DC with a maximum voltage of 600 AC and 30 DC. Button and body are black plastic.

Style B have a stainless steel and plastic housing that protects the internal mechanism. IP68 rated for continuous submersion, so they're good for marine applications. Rated 5 amps @ 120 volts AC and 28 volts DC. Button is black plastic.

Styles C and ***D*** are IP67 rated for temporary water submersion. Rated 0.5 amps @ 48 volts AC and 0.2 amps @ 50 volts DC with a maximum voltage of 250 AC and 50 DC. Button and body are plastic; bezel is metal. 6915K23 is illuminated with a red LED. **To Order:** Please specify button color: black or red.

For information about choosing an electrical switch, see page 855.

Low-Voltage Metal Push-Button Switches

Operate doorbells, buzzers, and other low-voltage circuits. Switches spring back (momentary), switch one circuit from off to on (SPST-NO), and have two screw terminals. Button is plastic. 69755K67 is UL recognized.

Styles A-C are panel mount. *Style A* snaps into a panel; *Styles B* and *C* have a hex nut. ***Styles D-F*** are surface mount. *Styles D* and *F* include mounting hardware; *Style E* has a 1/2″ trade size NPT threaded female hub and two 1/4″ dia. mounting lugs.

A **B** **C** **D** **E** **F**

★ Has one input terminal and three output terminals. ■ Body and button are brass. ▲ Button is rubber.

Touch-Sensor Flush-Mount Switches

Whether you create a single switch or a large panel of switches, it's easy to build your own finger-touch sensor switch. The adhesive front of the switch mounts behind a piece of plastic or glass, which you can customize with labels or graphics. Switches are momentary, switch one circuit from off to on, and have solder connections. Operate on 5 volts DC and have a 1 mA output rating.

Illuminated switches have a green LED.

For plastic mounting, choose a material with a maximum thickness of 0.078″ (5/64″). If you need plastic sheets, see 8574K on page 3565 and 85815K on page 3568.

For glass mounting, choose a material with a maximum thickness of 0.157″ (5/32″). If you need glass sheets, see 8476K on page 3622.

Note: Maximum thickness includes anything applied to the plastic or glass.

One Switch (Front)

(Back)

No. of Switches	Size	Nonilluminated		Illuminated	
For Plastic Mounting					
One	1 13/32″ × 1 13/32″	2792K11	$26.65	2792K15	$28.21

22 mm Panel Cutout Indicating Lights

Metal Bezel

Plastic

A great replacement for incandescent lights, these long-lasting LEDs mount in a 22 mm (7/8″) dia. panel cutout and have screw terminal connections. UL listed, CSA certified, and CE marked.

Metal Bezel— Provide durability for longer life. Depth behind panel is 1″. Oil- and watertight rated NEMA 4 and 13.

Plastic— Depth behind panel is 1 3/4″. Resist corrosion and are oil- and watertight, meeting NEMA 4X and 13.

To Order: Please specify color: blue, clear (plastic only) green, red, white, or yellow.

Voltage	Lens Dia.	Indicating Lights		Replacement Bulbs	
Metal Bezel with LED Bulb					
6V AC/DC	1 1/16″	5453T11	$44.97	5453T15	$14.53

240V AC	1 3/16″	7380K5	17.76	7557K97	14.57

30 mm Panel Cutout Indicating Lights

Metal

Plastic

Mount in a 30 mm (1 3/16″) dia. panel cutout. Lights have screw terminal connections. UL listed.

Metal indicating lights have a durable construction for long-term operation. Lens dia. is 1 1/16″. Depth behind panel is 2 3/16″. NEMA 4 and 13 rated to be oil- and watertight. CSA certified.

Plastic indicating light resists corrosion. Lens dia. is 1 5/8″. Depth behind panel is 2 1/16″. Meets NEMA 4X for washdown environments. C-UL listed. *Note:* When bulb burns out, the entire light must be replaced.

To Order: For indicating lights, replacement LED bulbs, and replacement lenses, please specify color: green, red, or yellow.

22 mm and 30 mm Panel Cutout Plastic Indicating Light Components

Lens Cap

LED Bulbholder

Label

Select a lens cap and LED bulbholder (each sold separately) to build a custom indicating light. All components are made of plastic. Assembled lights resist corrosion and are oil- and watertight, meeting NEMA 4X, 12, and 13, and IP65. CSA certified and CE marked.

Lens caps are UL recognized for use with LED bulbholders. **To Order:** Please specify cap color: blue, clear (30 mm light only), green, red, white (22 mm light only), or yellow.

LED bulbholders have screw terminal connections and include a clip for attaching a lens cap. UL listed. **To Order:** Please specify bulb color: blue, green, red, white, or yellow.

Optional ***labels*** make it easy to identify function. Message is printed in white. **To Order:** Please specify message: Blank, Open, Close, Up, Down, Forward, Reverse, On, Off, Off-On, Hand-Off-Auto, Jog, Reset, Run, Start, Stop, Stop-Start, or Emergency Stop.

16 mm Panel Cutout Plastic Indicating Lights

Incandescent Round

Incandescent Square

LED

Mount these compact indicating lights in a 16 mm (5/8″) dia. panel cutout.

Incandescent lights are NEMA 4, 13, and IP65 rated to be oil- and watertight. They have 0.11″ quick-disconnect/solder terminals. Depth behind panel is 1 9/16″. UL recognized, CSA certified, and CE marked. Lights require a 28-volt miniature bulb (sold separately).

LED light resists corrosion and is oil- and watertight, meeting NEMA 4X, 13, and IP65. It has screw terminal connections. Depth behind panel is 2 1/8″. UL and C-UL listed and CE marked. *Note:* When bulb burns out, the entire light must be replaced.

To Order: Please specify lens color: blue (LED only), green, red, white, or yellow.

LED

Standard with Quick-Disconnects

Standard with Wire Leads

Watertight Dome

Watertight Conical

Sunlight Visible and Waterproof

LED lights offer years of bulb life. They're made of plastic. CE marked. *Note:* When bulb burns out, the entire light must be replaced.

Standard lights are UL recognized and CSA certified. Lights with quick-disconnects have a chrome bezel. Lights with wire leads have a stainless steel bezel.

Watertight lights resist corrosion and meet NEMA 4X and 13. UL and C-UL listed.

Sunlight visible and waterproof lights can be used outdoors and still be seen. They have a chrome bezel. Rated IP67 for washdown applications. UL recognized and CSA certified.

To Order: Please specify color.

For information about choosing an electrical switch, see page 855.

Enclosure-Mounted Switches

Housed in a steel enclosure, these switches have contacts rated 3 amps @ 120 volts AC with a maximum voltage of 600 AC. Buttons switch one circuit and spring back (SPDT momentary) and have two screw terminal connections. Enclosure has 1/2″ and 3/4″ trade size conduit knockouts. NEMA 1 rated for indoor use. UL listed and CSA certified.

★Switches one circuit (SPST). ■Stays switched (maintained).

Corrosion-Resistant Washdown Enclosure-Mounted Switches

Whether you select one of our styles or design your own, you'll get a switch that's ready to install and meets NEMA 4X for washdown and corrosion protection. Buttons switch one circuit (SPST) and have two screw terminal connections. Enclosure has 1/2″ trade size conduit knockouts except 7546K32-K45 has PG-13.5 knockouts. UL listed, CSA certified, and CE marked.

Switches with plastic enclosure also meet NEMA 13 for oil protection. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC except 7546K32-K45, which are rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 AC and 250 DC.

Switches with aluminum enclosure are rated 10 amps @ 120 volts AC and 4 amps @ 24 volts DC with a max. voltage of 600 AC and DC.

Design Your Own Enclosure-Mounted Switch

Customize your own switch with plastic enclosure. All meet NEMA 4X for corrosion and washdown protection.
To Order: Please ask for 7546K888 and select from the options listed below. Indicate selections for each button from top to bottom.

- Panel Cutout: 22 or 30 mm
- No. of Buttons: 1, 2, or 3
- Button Style: flush, projecting, mushroom, lever, or key
- Contact Block: 1 Circuit Off to On (SPST-NO), 1 Circuit On to Off (SPST-NC), 1 Circuit Off to On or On to Off (SPDT), or 2 Circuits Off to On or On to Off (DPST)
- Switch Action: Springs Back (Momentary) or Stays Switched (Maintained)
- Button Color: black, green, red, or yellow
- Switch Label: Forward, Reverse, Up, Down, Open, Close, Auto, Stop, or Emergency Stop

Enclosure-Mounted Electrical Switches

For information about choosing an electrical switch, see page 855.

Emergency Stop Corrosion-Resistant Washdown Enclosure-Mounted Switches

Plastic Enclosure Pull-to-Reset

Plastic Enclosure Pull-to-Reset with Indicator

Aluminum Enclosure Turn-to-Reset

Mounted in an enclosure with a yellow cover, these switches conform to EN418 for machine safety. They have a 1 9/16″ dia. red mushroom button except switches with indicator, which have a 2 1/8″ dia. button. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. UL listed, CSA certified, and CE marked.

With Plastic Enclosure— All have 1/2″ trade size conduit knockouts. Meet NEMA 4X and 13 and IP66 for washdown, oil, and corrosion protection. *Key-to-reset* switches stay locked out until switch is reset with a key. They include two keys. Switches *with indicator* alert you from the front and sides when the switch has been actuated.

With Aluminum Enclosure— All have 0.89″ (PG-16) knockouts. Meet NEMA 4 and 13 and IP66 for washdown and oil protection.

Replacement contact blocks switch one circuit from on to off (SPST-NC).

Stainless Steel Corrosion-Resistant Washdown Enclosure-Mounted Switches

Two Button, One Flush/ One Projecting

Protected by a tough stainless steel enclosure that stands up to abuse, these switches meet NEMA 4X for washdown and corrosion resistance. Rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. Buttons have screw terminal connections and each switches two circuits: one from off to on and one from on to off (DPST-NO/NC). Start buttons are black (except 6758K35 is green); stop buttons are red. Enclosure has 7/32″ dia. mounting holes. UL listed and CSA certified.

Hazardous-Location Enclosure-Mounted Switches

Two Button

Enclosed in corrosion-resistant cast aluminum alloy, these switches meet NEMA 7 and 9 for use in hazardous locations Class 1, Groups C and D; Class 2, Groups E, F, and G; and Class 3. Rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 volts AC and DC. Buttons have screw terminal connections and each switches two circuits: one from off to on and one from on to off (DPST-NO/NC). Start buttons are black; stop buttons are red. 6883K53 has a black lever with white insert. Enclosure has 3/4″ trade size knockouts and 3/8″ dia. mounting holes. UL listed and CSA certified.

	Before Switching, Circuit Is	Industry Designation	Switch Action	Switch Label		
Single Button— *6″ Ht. × 4 5/16″ Wd. × 4 7/8″ Dp.*

Enclosure Disconnect Switches

Make sure your enclosure can't be opened unless it's safe—turn the switch to disconnect power before you open the door. Also known as door interlock disconnect switches, they are lockable in the off position using a padlock with a 5/16″ dia. shackle (not included). All switch three circuits (3PST) and have screw terminal connections. They're also 35 mm DIN-rail mountable. Switches have an 11 13/16″ long metal shaft that you can cut to fit your application and 3/16″ dia. mounting holes. Mount in a 7/8″ dia. panel cutout. Switch is yellow and red plastic. UL and C-UL listed and CE marked.

Auxiliary contact block can be used to power an indicating light; send a signal to a PLC, relay, or small motor; or to connect to another device. It switches one circuit from off to on (SPST-NO) and one circuit from on to off (SPST-NC). Rated 10 amps @ 600 volts AC.

For information about choosing an electrical switch, see page 855.

Disconnect Switches

These high-amp switches stay switched (maintained). They switch three circuits (3PST) and have six screw terminal connections except DC-rated padlockable switches, which switch two circuits (DPST) and have four screw terminal connections. Maximum voltage for AC-rated switches is 600. Maximum voltage for DC-rated 20- to 50-amp switches is 800; 63-amp switch is 650. UL listed and C-UL listed, CSA certified, and CE marked except 6759K73 is CSA certified and CE marked only.

Panel Mount—*Padlockable* and *nonpadlockable* switches are plastic and require a 3/8″ dia. panel cutout. They can also mount on a 35 mm DIN rail. *Harsh-environment padlockable* switches are stainless steel and require a 7/8″ dia. panel cutout. They're IP69K rated for high-pressure and high-temperature washdowns.

Enclosed—*Padlockable, DC-rated padlockable,* and *nonpadlockable* switches are plastic. *Padlockable* and *nonpadlockable* switches have 1.2″ (PG-21) knockouts. *Harsh-environment padlockable* switches are stainless steel and IP66 rated for washdown protection.

Padlockable switches have a dial selector knob and lock in the off position. Lock out using a padlock with a maximum shackle dia. of 5/16″ (not included). ***Nonpadlockable*** switches have a lever selector knob.

To Order: Please specify color: yellow with red knob or gray (except enclosed harsh-environment and DC-rated switches come in yellow with red knob only). Use yellow with red knob for a main disconnect switch. Gray is for other disconnect applications.

Also Available: Additional power poles, neutral poles, and terminal blocks. Please ask for 6759K88 and specify switch part number and accessory type.

♠ Has 0.87″ (PG-16) knockouts and is rated IP66 for washdown protection.

Compact Disconnect Switches

Just because your electrical load is large doesn't mean your switch needs to be. These switches are a smaller, cam-style alternative to other disconnect switches. Disconnect power to electrical panels, motors, and appliances with high amp ratings. Switches can be used in single- and three-phase applications with a maximum voltage of 600 AC and 24 DC. They stay switched (maintained) and switch three circuits (3PST). All have ground connections, eight screw terminal connections, and a red lever knob. They are marked as "Main Switch" and have a safety lockout that can be secured using a padlock with a maximum shackle dia. of 5/16″ (not included). When locked, the knob can't be turned to the on position. Enclosure is corrosion-resistant gray plastic. IP65 rated for oil and water resistance. UL recognized and CSA certified.

Panel-mount switches require a 3/8″ dia. panel cutout. ***Enclosed 12-*** to ***25-amp*** switches have four 0.87″ (PG-16) knockouts; ***50-*** and ***63-amp*** switches have six 1.14″ (PG-21) and four 1.5″ (PG-29) knockouts.

Joystick Switch Components

Assemble a complete switch with an actuator and at least one contact block (sold separately) to operate up to eight circuits. Actuators fit in a 22 mm (7/8″) dia. panel cutout and include a mounting clip that accepts two contact blocks. Depth behind panel is 2 5/8″. Made of black rubber. NEMA 4X and 13 and IP66 rated for water, oil, and corrosion resistance. UL listed, CSA certified, and CE marked.

Two-position actuators move up and down and require one to four contact blocks. ***Four-position actuators*** move up, down, left, and right and are off in the center position. Require two to four contact blocks.

Contact block switches two circuits: one from off to on and one from on to off (DPST-NO/NC). It has screw terminal connections. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and 300 DC.

Optional mounting clip connects up to four contact blocks.

For information about choosing an electrical switch, see page 855.

Heavy Duty Steel Disconnect Switches

240V AC/ 250V DC Indoor

600V AC/DC Indoor

Also known safety switches, these have spring-driven, quick-make/quick-break action to eliminate arcing and prolong switch life. All stay switched (maintained) and have wire lug connections.

Switches have two separate lockouts that prevent door access and lock the handle—secure with padlocks (not included). An interlock feature prevents opening the cover when the switch is on or from turning on the switch when the cover is open. Knockout sizes range from 1/2″ to 3″ trade size. UL listed.

Note: Fusible hp ratings are based on time-delay fuses installed.

Rain-tight outdoor enclosures are rated NEMA 3R for falling liquid and light splashing.

240V AC/250V DC Maximum Voltage Switches

Enclosure has a 3/4″ slot and 1/4″ dia. mounting holes on the back panel. Lockouts accept a padlock with a 5/16″ dia. shackle.

Fusible switches are designed with fuse holders inside the enclosure so there's no need for additional wiring for circuit protection. *Note:* If Class RK1, Class RK5, or Class T fuses are used, a rejection clip kit is required. Ask for 7524K888 and specify the McMaster-Carr switch part number and the fuse class. *DPST* switches use two fuses; *3PST* switches use three fuses (see pages 916-918).

Nonfusible switches are used where overload protection is not needed.

Pendant Switches with Cable

Already wired, these switches are ready to operate your mobile machinery. Switches spring back (momentary) except Style D, which stays switched (maintained).

(A&B) Switches are gray.

(C-J) Sealed switches withstand dirt, water, and corrosion. Color is black except Style F, which is yellow. *Styles C-E* are IP68 rated for continuous submersion in water. *Styles G-J* are IP66 and NEMA 4 rated for washdown protection. *Styles H* and *J* are labeled "Up/Down."

For information about choosing an electrical switch, see page 855.

Pendant Switches

Operate hoists, trolleys, cranes, and bridges with these handheld, multiple-button switches. All have push-buttons that spring back (momentary) and screw terminal connections. They can be wired to prevent operating two buttons simultaneously. Housing is yellow. CSA certified.

Two-speed switches have staged contacts. Push button halfway to close first contact (for slow speed) and all the way to close second contact (for high speed).

Corrosion-resistant washdown switches are polycarbonate and NEMA 4X and 12 rated for washdown, corrosion, and oil resistance. UL listed except 7161K18.

Also Available: Corrosion-resistant washdown pendant switches in other configurations. Please ask for 7161K999 and tell us what you are looking for.

Impact-tough switches are made of durable rubber.

▲Red button is 1 NC. ●Emergency stop button is 1 NC.

Easy-Grip Pendant Switches

The slim shape of these pendant switches fits comfortably in your hand. They have a mechanical interlock that prevents operating both buttons simultaneously (except 7987K32, which must be wired for this feature). Buttons spring back (momentary) and have screw terminal connections. Enclosure is yellow plastic. NEMA 4X rated for washdown and corrosion protection except 7987K31, which is NEMA 4 rated for washdowns. 7987K32 is also NEMA 6 rated for temporary submersion in water. UL listed except 7987K32. CSA certified except 7987K31 is C-UL listed.

Two-speed switch has staged contacts. Push halfway to close first contact (for slow speed) and all the way to close the second contact (for high speed).

Wireless Pendant Switch Systems

Control power from a distance without being tethered by a cord. Systems include one transmitter and one receiver. Buttons switch one circuit (SPST-NO), spring back (momentary), and are single speed. Transmitters run on two AA batteries (included); receivers have a 6-ft. cable with spade terminals. They operate on one of 38 channels, so you can use up to 38 systems in the same area. Rated 10 amps @ 250 volts AC and 24 volts DC. Housing is orange nylon. IP65 rated for washdowns.

Two-button transmitter operates up to 150 ft. away. ***Four-*** and ***six-button*** transmitters operate up to 250 feet away and have a turn-to-reset stop button and a start/on dial.

To Order: Please specify voltage: 110/220 volts AC or 12/24 volts AC and DC. For a replacement transmitter, specify the serial number. *Note:* If adding to an existing system in your facility, please advise which channels are currently in use so a different channel can be provided.

For information about choosing an electrical switch, see page 855.

Variable Output Switches

Also known as potentiometers, variable output switches fine-tune electrical current, giving you control over speed, volume, or light intensity. Select a switch and a dial (except digital switches, which include a dial or buttons) to adjust electrical current easily and accurately. For additional dials, see 3148K on page 2221.

Switches have a plastic housing and three solder lug connections except on/off control switch, which is metal with five solder terminals.

Economy switch offers good resolution at an economical price.

Standard switches have a finer resolution than economy style.

Compact switch saves valuable panel space.

High-resolution switch offers the finest resolution, plus it's built to withstand demanding environments.

Digital switches have a three-position digital display and snap into your panel. *Optional cover for digital switch with buttons* is clear rubber.

Long-life switch is metal and has ball bearings for smoother rotation. Service life is twice that of the other switches.

On/off control switch shuts off power to your device when turned all the way to the left. It switches one circuit from off to on (SPST-NO). On/off control is rated 1.5 amps @ 12 volts DC.

To Order: Please specify maximum resistance.

Dials have an unthreaded hole with set screw. *Styles J* and *K* have a locking feature that holds the dial setting. The more marks per turn, the more precise.

Heavy Duty Variable Output Switches

22 mm

30 mm

NEMA-rated for tough environments, these switches let you adjust speed, volume, or light intensity. Also known as potentiometers, they have a single-turn dial and screw terminal connections. Maximum voltage is 500 AC and DC. UL listed and CSA certified.

22 mm dia. panel cutout switch is NEMA 4X rated to protect against washdowns and corrosion. Depth behind panel is 2 1/4″. Housing is polyester; dial is 1 1/8″ dia. black plastic with a white face.

30 mm dia. panel cutout switch is rated NEMA 13 for protection against oil and coolant spray. Depth behind panel is 1 3/4″. Housing is metal; dial is 1 1/4″ dia. black plastic.

To Order: Please specify maximum resistance.

Rotary Selector Switches

13/32″ with Screw Terminals

13/32″ with Solder Lugs

1/4″

Control multiple devices with one switch. Each position closes a set of contacts in each circuit, so you can select between multiple devices on one or more circuits. Contacts stay switched (maintained).

13/32″ dia. panel cutout switches are plastic and have a 1/4″ shaft dia. Knobs not included; see page 2221.

1/4″ dia. panel cutout switches are nickel-plated brass and have a 1/8″ shaft dia. They include a black plastic knob.

For information about choosing an electrical switch, see page 855.

Key Switches

Ensure security and prevent accidental actuation. Key switches have a threaded body and stay switched (maintained). Include two keys and a hex nut for tightening the switch to a panel.

Standard—Made of die cast zinc. 65635K14 and K13 have a stainless steel face. Switches with *6″ wire leads, quick-disconnects,* and *solder lugs* are rated 4 amps @ 125 volts AC and 24 volts DC. UL recognized and CSA certified. Switches with *screw terminals* are rated 6 amps @ 120 volts AC. UL recognized and CSA certified. Switches with *10″ wire leads* are rated 7 amps @ 28 volts AC and DC.

High Security—Switches have a round key that is difficult to duplicate. Rated 7 amps @ 28 volts AC and DC. Made of die cast zinc.

High Amp—Use in high-current applications such as motor and pump loads. Rated 20 amps and 1.5 hp @ 120 volts AC. Made of plastic and steel. UL recognized.

Also Available: Replacement keys. Please ask for 7188K888 and specify the McMaster-Carr part number of your switch.

★ Springs back (momentary). ■ Can also be operated by a master key. Please ask for 7188K14.
▲ Can also be operated by a master key. Please ask for 7188K18. ♣ Includes one key; depth behind panel is 1 1/16″.

Washdown Key Switches

With a stainless steel face, dust shutter, and rubber O-ring, these NEMA 4-rated key switches are ready for washdown environments. Switches have a threaded zinc body, stay switched (maintained), and mount in a 3/4″ dia. panel cutout. They include two keys and mounting hardware. UL recognized and CSA certified.

One-circuit switches are rated 4 amps @ 125 volts AC and 28 volts DC.
Two-circuit switches are rated 10 amps @ 300 volts AC and 24 volts DC.

Sealed Touch Pad Switches

Where push-buttons or toggles won't work, try a low-profile touch pad switch. The sealed design provides water resistance; switches also resist mild acids, bases, and alcohols (but not suitable for continuous contact). Often used for machine start/stop and door opening applications, they switch one circuit from off to on (SPST-NO) and spring back (momentary). Rated 1 amp @ 28 volts AC and DC. Switches have wire leads and a black PVC housing. UL recognized. ***Optional mounting frames*** are metal and secure your switch to a wall or benchtop. Holes are 1/8″ dia. (fasteners not included).

DIN-Rail Mount Toggle Switches

Conveniently built into a terminal block, these switches mount on a 35 mm DIN rail. They have screw terminal connections and can be mounted side-by-side. UL recognized and CE marked.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

For information about choosing an electrical switch, see page 855.

Toggle Switches

With Screw Terminals

With Quick-Disconnects

With Solder Lugs

Controlling a circuit is as easy as flipping a switch. Switches have a 15/32″-32 bushing and hex nut for mounting in a 1/2″ dia. panel cutout. Maximum voltage is 250 AC and 28 DC. UL recognized and CSA certified.

Optional "Off/On" toggle switch labels and switch boots are sold on page 876. See 70205K4 boot for toggles that switch one or two circuits and 70205K75 boot for toggles that switch three or four circuits.

Two-position illuminated flat toggle switch has a 14-volt incandescent bulb.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

To Order: Please specify connections: screw terminal, 1/4″ quick-disconnect, or solder lug. For illuminated flat toggle switch, also specify green or red.

♣ Quick-disconnect connections only.

Miniature Toggle Switches

Standard with Quick-Disconnects

Standard with Solder Lugs

Mil. Spec.

Half the size of most toggle switches, you can fit more of them in your panel. UL recognized. For "Off/On" toggle switch labels, see page 876.

Standard switches include a 1/4″-40 bushing and hex nuts for mounting in a 1/4″ dia. panel cutout. Maximum voltage is 250 AC and 30 DC. CSA certified. For optional switch boot, see 70205K3 on page 876. **To Order:** Please specify connections: 1/16″ quick-disconnect or solder lug.

Mil. Spec. switches meet MIL-S-83731 to withstand splashing, dirt, and high vibration. They have a water-resistant silicone seal and solder lug connections. Mount in a 1/2″ dia. panel cutout using the included 15/32″-32 bushing and hex nuts. Maximum voltage is 125 AC and 30 DC. For optional switch boot, see 70205K4 on page 876.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

■ Not offered with quick-disconnect connections.

For information about choosing an electrical switch, see page 855.

Harsh Environment Toggle Switches

Sealed to hold up in demanding environments, these switches come with a hex nut for mounting in a 1/2″ dia. panel cutout. For "Off-On" toggle switch labels, see page 876.

Washdown switches meet IP67. They have a Buna-N rubber seal that covers the opening in the panel and an M12 mounting bushing. Maximum voltage is 250 AC and 30 DC. For optional switch boot, see 70205K26 on page 876.

Oil-tight and ***Mil. Spec. washdown switches*** have a silicone rubber seal around the toggle and a 15/32″-32 mounting bushing. UL recognized, CSA certified, and CE marked. For optional switch boot, see 70205K75 on page 876 (not for use with flat toggles). *Oil-tight washdown switches* are IP68 and NEMA 4 and 13 rated for washdown and oil spray protection. Maximum voltage is 277 AC and 28 DC. Flat toggles are high-visibility yellow. *Mil. Spec. washdown switches* meet MIL-S-3950. Maximum voltage is 125 AC and 28 DC.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

Pull-to-Unlock Toggle Switches

Prevent accidental movement—these toggles must be pulled up before they can switch a circuit. Rated IP68 and NEMA 4 and 13 for washdown and oil spray protection, they have a completely sealed switching chamber. Switches have a silicone seal, screw terminal connections, and a 15/32″-32 bushing for mounting in a 1/2″ dia. panel cutout. Maximum voltage is 277 AC and 28 DC. UL recognized, CSA certified, and CE marked. For optional switch seal, see 70205K38 on page 876.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

For information about choosing an electrical switch, see page 855.

High-Amp Toggle Switches

With Screw Terminals

With Quick-Disconnects

With Solder Lugs

Built to handle large electrical loads. Switches include an M12 metric bushing and hex nut for mounting in a ½″ dia. panel cutout. Maximum voltage is 250 AC and 30 DC. Switches with screw terminals rated 16 and 20 amps @ 125 volts AC are UL recognized and CSA certified; switches with screw terminals rated 30 and 50 amps @ 125 volts AC are UL recognized except 8001K32

Note: Switches that stay switched are also known as maintained.

Optional "Off/On" toggle switch labels and switch boots and seals are sold separately on this page. See 70205K5 seal for 8001K51-K54 and K85; see 70205K26 boot for switches with ¼″ quick-disconnect connections and solder lug connections.

♣ Has a 15⁄32″-32 mounting bushing. Maximum voltage is 250 AC/DC. ▲ Also rated 20 amps @ 250V AC.

Toggle Switch Guards and Labels

Guard

Vertical Label

Horizontal Label

Use these accessories with toggle switches that have a 15⁄32″-32 or M12 threaded bushing and mount in a ½″ dia. panel cutout.

Guard protects your two-position switch (0.69″ maximum toggle height) from accidental activation. Cover is spring loaded and stays open until you close it, returning your switch to the off position.

Labels indicate whether your switch is in the on or off position. Made of steel.

Guard	**1143T1**	$18.10
Vertical Labels (Pkg. of 5)	**9423T11**	5.96
Horizontal Labels (Pkg. of 5)	**9423T12**	5.96

Switch Boots and Seals

Protect your toggle, push-button, and rotary switches from moisture and dust by replacing your panel mounting nuts with switch boots and seals. All are high-strength silicone and include a nut. UL and C-UL recognized.

(B) Quick-install toggle boot fits over the existing mounting bushing, so you don't have to remove the switch from the panel to install.

(C) Armored toggle boot has a nickel-plated brass cap.

(G) Armored push-button boot has a stainless steel housing.

For information about choosing an electrical switch, see page 855.

Rocker Switches

For a lower profile and smoother look than toggle switches, snap these rocker switches into your panel. Maximum voltage is 250 AC except illuminated miniature are 125 AC and illuminated high-amp switches are 110 AC. Miniature and illuminated miniature switches have 3/16″ quick-disconnects; standard and illuminated standard switches have 1/4″ quick-disconnects; and all others have solder lugs. Two-position switches are UL recognized and CSA certified, unless noted. Three-position switches are UL and C-UL recognized.

Illuminated switches include a bulb. *Illuminated standard* switches stay lit regardless of switch position. *Illuminated high-amp* switch has a red square on one side of the rocker. *Three-position illuminated* switches stay lit regardless of switch position. Bulb is 28 volts and replaceable.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

♠ 0.110″ quick-disconnect connections. ★ Amp rating is @ 110V AC. ■ Includes mounting screws. Not UL recognized or CSA certified.

Heavy Duty Rocker Switches

A durable steel housing holds up in tough environments. These rocker switches have solder lug connections and stainless steel retaining clips for mounting in a 1 1/4″ Lg. × 3/4″ Wd. panel cutout. Rated 10 amps @ 125 volts AC and 6 amps @ 30 volts DC. Maximum voltage is 250 AC and 30 DC. UL and C-UL recognized.

Illuminated rocker switches are lit on each side by a separate replaceable 28-volt bulb (included) and stay lit regardless of switch position. One side of the rocker has a green lens; the other has a red lens.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

Washdown Rocker Switches

Get the dust and washdown protection you need. Switches with wire leads are rated IP67. The front side of switches with screw terminals and 1/4″ quick-disconnects is rated IP67. All are black and snap in a 1 11/32″ Lg. × 11/16″ Wd. panel cutout. Rated 15 amps @ 125 volts AC and 30 volts DC. Maximum voltage is 250 AC and 30 DC. UL and C-UL recognized.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

For information about choosing an electrical switch, see page 855.

High-Amp Rocker Switches

Designed for high currents, these switches mount in a 1 7/16″ Lg. × 15/16″ Wd. panel cutout (mounting hardware included) and have screw terminal connections. Rocker is white. UL recognized.

AC-rated switches are rated 30 amps @ 125 volts AC. Maximum voltage is 250 AC.
DC-rated switches are rated 30 amps @ 30 volts DC. Maximum voltage is 125 DC.
Note: Switches that stay switched are also known as maintained.

High-Starting Amp Rocker Switches

Horizontal Label

Vertical Label

Built to handle starting currents up to 10 times greater than their amp rating, these rockers are also known as high-inrush current switches. They are used with amplifiers, power supplies, and other high-starting amp devices. Switches snap into a 1 3/16″ Lg. × 1 3/16″ Wd. panel cutout and have solder lug connections. Rated 16 amps @ 125 volts AC and 5 amps @ 30 volts DC. Maximum voltage is 250 AC and 72 DC. UL recognized and CSA certified.

To Order: Please specify rocker color: black or red.
Note: Switches that stay switched are also known as maintained.

Push-Pull Switches

Push-pull operation lets you easily see the position of these DC switches. Made of brass, they're good for marine environments and mount in a 3/8″ dia. hole (hardware included). Maximum voltage is 24 DC. 8795T13 has a plastic-covered body for extra protection from moisture and dirt.

Three Position—Pull to the middle position to close one contact or all the way to close two contacts.
Note: Switches that stay switched are also known as maintained.

Light-Sensing Light Controls

Standard with Plastic Housing

Flush Mount

Conserve electricity with photoelectric controls that turn lights on after dark and off at daybreak. Typically used outdoors, they work with any bulb type within the specified watt rating, unless stated otherwise. All switch one circuit (single pole).

Standard controls are weatherproof and have a 1/2″ NPT male conduit fitting and 6″ wire leads. 7078K13 is ETL and C-ETL listed and CSA certified. 7078K17 is CSA certified only. 7078K15 is UL listed and CSA certified.

Swivel-head controls swivel 160° for a better sensing position. They have a weatherproof plastic housing, 1/2″ NPT male conduit fitting, and 6″ wire leads. 7677K46 is UL listed and CSA certified.

Flush-mount controls have a weather-resistant plastic housing and 6″ wire leads. A built-in delay prevents false switching due to light flashes. UL listed and CSA certified. 7000K21 mounts through an 11/16″ hole in a post or light fixture. 7000K19 mounts through a 3/8″ hole in a post or light fixture. 7000K22 mounts to an outlet box and includes a gasketed aluminum wall plate.

Socket-mount controls screw in between the bulb and socket of any medium-base incandescent or halogen fixture. They have a weather-resistant plastic housing and are designed for incandescent and halogen lighting only. ETL and C-ETL listed and CSA certified. Choose *standard-bulb* type for small enclosed fixtures and *PAR-bulb* type for floodlights.

Twist-lock controls make replacement easy. They require a twist-lock base and bracket (sold separately). Housing is plastic. Control *with timer* can be set to turn lights off for a desired period during the night to save energy.

Twist-lock base and bracket has 14″ wire leads, a square top mounting hole with a 5/16″ wide hanger notch, and a 3/8″ dia. bottom mounting hole (screws not included). Base is weather-resistant plastic and bracket is aluminum.

Light Switches

Toggle | Rocker | Key Actuated | High Security Key Actuated | Switch Lockout

Durable for use throughout your facility, these specification-grade switches work with incandescent, halogen, fluorescent, and high-intensity discharge lighting. You can also use them with AC motor loads up to 80% of the amp rating. They stay switched (maintained) and have screw terminal connections. Switches can be back- or side-wired and fit standard single-device (single-gang) wall boxes and plates. Wall plates are not included (except with high-security key-actuated switches); sold separately on pages 832 and 915. UL listed and CSA certified.

Key-actuated switches include a key that is removable in the on and off positions. The same key is provided for all switches.

High-security key-actuated switches include a hard-to-duplicate round key that's removable in the on and off positions.

Switch lockout mounts on a switch to secure it in an on or off position. Use with a 9/32″ shackle dia. padlock (not included).

To Order: Please specify color where necessary: white, ivory, brown, clear, gray, or stainless steel.

Wireless Light Switches

Turn fluorescent fixtures on and off with a wireless signal. To set up, surface mount a switch and install a control relay in the fixture. No batteries or secondary power source is necessary. CE marked.

Switches transmit a 315 MHz wireless signal up to 150 ft.

Control relays have 16″ wire leads. UL and C-UL listed. *SPST* relays switch one circuit on. Rated 5 amps @ 120/277 volts AC. *SPDT* relays switch one circuit on or off. Rated 20 amps @ 277 volts AC.

Light Dimmers

Rotary | Slide | Slide with Wall Plate | Toggle | Slide with Mini On/Off Rocker | Mini Slide with On/Off Rocker | Mini Slide with On/Off Toggle

Save energy by setting your lights at the appropriate brightness. These dimmers fit single-device (single-gang) wall boxes and plates. Wall plates are not included (unless stated otherwise); sold separately on pages 832 and 915. They have wire leads except toggle and mini slide switches have screw terminals. UL listed.

Rotary—*600-watt* dimmer pushes on and off. *1,000-, 1,500-,* and *2,000-watt* dimmers switch off when turned all the way to the left.

7083K55 and K56 can be used for three-way applications.

To Order: Please specify color where necessary.

Motion-Sensing Light Switches

When personnel enter an area, infrared sensors detect their presence and turn on the lights. Switches have a 5-minute to 30-minute user-selectable time delay to turn lights off. A manual override lets you switch lights off when area is occupied. Switches fit in a single-device (single-gang) wall box and are for incandescent and fluorescent lights. They have wire leads and include a wall plate. Incandescent watt rating is 800 @ 120 volts AC. Fluorescent watt rating is 1,200 @ 277 volts AC. UL and C-UL listed.

One Circuit—Switch one circuit from off to on (SPST-NO). **Two Circuit**—Switch two circuits from off to on (2 SPST-NO).

One Circuit

No. of Circuits	Amp Rating @ 120/277V AC	White		Ivory	
1 (Single Pole)	6.6/4.3	7704K34	$69.42	7704K33	$69.42
2 (Double Pole)	6.6/4.3	7704K64	93.82	7704K63	93.82

Slide Switches

Screw mount these compact nylon slide switches into a 1/2″ Lg.×1/4″ Wd. panel cutout. They switch two circuits from off to on and on to off (DPDT), stay switched (maintained), and have six terminals. Rated 6 amps @ 125 volts AC and 1 amp @ 125 volts DC. Mounting holes are 5/32″ dia. and 1 1/8″ center to center (screws not included). UL recognized and CSA certified.

Connections		
Solder Lugs	66065K23	$4.80
6″ Wire Leads	66065K27	6.01

For information about choosing an electrical switch, see page 855.

Motion-Sensing Light Controls

Ceiling Mount

Wall/Ceiling Mount

Fixture Mount

Fixture Mount for Wet Locations

Also called occupancy sensors, these controls turn your lights on when movement is detected and off when an area is unoccupied. They have a white plastic housing and wire leads except 7477K32 and K36 have screw terminal connections. Use indoors with fluorescent or incandescent lights. Fixture-mount controls for wet locations can also be used outdoors. UL and C-UL listed except 7477K53 and K54 are ETL and C-ETL listed.

Ultrasonic sensors respond to movement and don't require a direct view of the occupants. *Infrared sensors* detect moving heat sources and require a direct view of the occupants. *Ultrasonic/infrared sensors* minimize false activation.

Ceiling- and **fixture-mount** controls are ready to operate your 120-volt lighting circuit. Incandescent watt rating is 800 @ 120 volts AC. Fluorescent watt rating is 1,200 watts @ 277 volts AC except 7477K52 is rated 1,800 watts @ 277 volts AC. *Ceiling-mount* controls fit a 4″ outlet box. *Fixture-mount* controls have a 1/2″ NPT male connection. Improve the position of your control with a *mounting extension*, which threads onto your fixture.

Wall/ceiling mount control operates at low voltage and requires a power controller to switch a 120- or 277-volt AC lighting circuit. Mounting bracket and screws are included. *Power controller* has a relay that can switch a maximum 20 amp load.

Cable-Pull Emergency Stop Switches

One Direction

One Direction with LED

Two Direction

One-Direction Accessory Kit

Pull the cable to immediately break the circuit and cut off electrical power. All stay switched (maintained) and have screw terminal connections and a manual reset. Rated NEMA 4 for washdowns and NEMA 12 for oil protection. Enclosures are aluminum, unless stated otherwise. Mounting hardware not included.

One-direction switches have a 1/2″ NPT female threaded conduit entry and four 1/4″ dia. mounting holes. CSA certified and CE marked.

One-direction switch with LED indicator illuminates when switch has been pulled. It has a 1/2″ NPT threaded conduit entry and four 1/4″ dia. mounting holes. Enclosure is die cast zinc and a tension indicator helps you set the correct cable tension. UL listed, CSA certified, and CE marked.

Two-direction switch has a 3/4″ NPT female threaded conduit entry and two 5/16″ dia. mounting holes. When used with the tension springs in the cable accessory kit (sold separately), contacts open to stop machinery if the cable breaks. UL listed and CE marked.

Accessory kits simplify installation of a new cable-pull switch. Kits for *one-direction* switches include cable (in max. lengths shown below), tension screws, clamps, and thimbles. Kit for *one-direction switch with LED indicator* includes a J-hook turnbuckle, thimbles, clamps, and cable supports (eyebolts with hardware). For cable, see 8912T36 on page 1409. Kit for *two-direction* switch includes the same items as the one-direction kits plus eyebolts (instead of thimbles) and tension springs.

Cable-Pull Stop Switches

Turn off production lines and material handling systems. This switch mounts in any position and has a manual reset for added safety. It switches one circuit from on to off (SPST-NC) and stays switched after released (maintained). Rated 6 amps @ 120 volts AC, 3 amps @ 240 volts AC, and 0.55 amps @ 125 volts DC. Maximum voltage is 600 AC and DC. Enclosure is aluminum with a 1/2″ NPT female threaded conduit entry, screw terminal connections, and two mounting holes (fasteners included). Overall size is 6 1/2″ Ht.×5″ Wd.×3 1/4″ Dp. Meets NEMA 1 for indoor use. UL listed, CSA certified, and CE marked.

Note: Cable (not included) should be supported with eyebolts every 5 ft.

Max. Cable Length	No. of Circuits	Actuation Force		
75 ft.	1	2 to 6 lbs.	7186K53	$192.88

Overhead Rope-Pull Switches

Keep your switch out of the way. Pull the hanging rope in any direction to actuate. Switches two circuits, one from off to on and one from on to off (DPST-NO/NC). It springs back after released (momentary).

Rated 6 amps @ 120 volts AC, 3 amps @ 240 volts AC, and 0.55 amps @ 125 volts DC. Maximum voltage is 600 AC and 600 DC. Enclosure is aluminum with a 1/2″ NPT female threaded conduit entry and screw terminal connections. Overall size is 5 1/2″ Ht.×5 1/4″ Wd.×3 1/8″ Dp. Meets NEMA 4 for washdowns. UL listed, CSA certified, and CE marked.

Included Rope Lg.	No. of Circuits	Actuation Force		
15 ft.	2	5 lbs.	8488K61	$197.93

For information about electrical switches, see page 855.

About Motor Switches and Starters

Motor switches provide manual on/off control of a motor circuit. They can also be used in other circuits, including lighting and electric heat circuits. There is no overload protection.

Motor starters provide on/off control of a motor circuit with the additional benefit of overload protection. This protection monitors the current flowing to a motor and opens the circuit if the current exceeds the full-load amp rating. The full-load amp rating is the current the motor is expected to continuously draw under normal conditions. This rating is often found on the motor's faceplate.

ⓘ If the full-load amp rating is not shown on your motor's faceplate, you can estimate the amp rating (given the motor's hp and voltage) using a chart. Go to mcmaster.com and search for **7603KAC**.

Manual Motor Switches

Silver contacts dissipate heat and extend switch life. All stay switched (maintained) and have screw terminal connections. UL listed and CSA certified.

Indoor enclosure is nylon and rated NEMA 1.

Rain-tight enclosure is aluminum and rated NEMA 3R.

Washdown enclosure is polyester and rated NEMA 4X. It can also be used as a motor disconnect switch.

Hazardous-location enclosure is aluminum and rated NEMA 7 and 9.

Manual Motor Starters

Compact size makes these starters ideal when multiple motor circuits are housed in one panel. Built to IEC standards, they have three poles, screw clamp connections, and an adjustable overload relay that allows you to set the exact overload amperage you need. Mount on a standard 35 mm DIN rail (see page 915) or in an *enclosure*, which you don't have to open to control the starter. Rated 25 amps @ 600 volts AC. UL listed, CSA certified, and CE marked.

Note: Ensure the full-load amp rating of your motor falls within the starter's adjustable overload amp range.

Enclosure with external lever has four PG-16 threaded holes for conduit.

Auxiliary contacts allow you to add a signal, alarm, or other device. They have one normally open and one normally closed contact. Rated 1 amp @ 400 volts AC.

ⓘ If the full-load amp rating is not shown on your motor's faceplate, you can estimate the amp rating (given the motor's hp and voltage) using a chart. Go to mcmaster.com and search for **7603KAC**.

Motor Starters

Open Standard

Open Reversing

Enclosed Standard

Built to IEC standards, these motor starters fit tighter spaces than the heavy duty starters on the next page. They activate via an electrical signal (control voltage) and can be operated remotely. An adjustable overload relay allows you to set the exact overload amperage you need. It trips in less than 10 seconds (Class 10 trip time) and has a manual reset and one normally open (NO) and one normally closed (NC) auxiliary contact. **Additional auxiliary contacts** for adding a signal, alarm, or other device are sold separately.

Open starters can be mounted on 35 mm DIN rail (see page 915 for rail).

Enclosed starters have a watertight plastic enclosure that's rated NEMA 4X for corrosion resistance. They have an overload reset on the cover.

Reversing starters are for use with reversible motors.

Note: Ensure the full-load amp rating of your motor falls within the starter's adjustable overload amp range. Match control voltage to your control circuit; motor voltage may be different.

To Order: Please specify control voltage: 24 AC, 24 DC, 120 AC, 200/240 AC, or 480 AC.

Manual Motor Starter Components

Build your own starter by combining a switch and a thermal overload element.

Flush Plate

Indoor Enclosure

Switches

Switches have screw terminal connections and are for use with single-phase motors rated 1 hp @ 115/230 volts AC. Flush plate and indoor (NEMA 1) enclosure are steel; water/oil-tight enclosure is die cast zinc and rated NEMA 4 and 12 for outdoor use.

Switches **with pilot light** indicate when the starter is on.

Two-circuit switches can also be used on DC motors up to ¾ hp.

	Ht.	Wd.	Dp.	Without Pilot Light: Switches One Circuit		Without Pilot Light: Switches Two Circuits		With Pilot Light: Switches One Circuit		With Pilot Light: Switches Two Circuits

Thermal Overload Elements

To Order: Please specify the full-load amp rating of your motor.

Available Amp Range			Available Amp Range			Available Amp Range		
0.157-0.321	7254K61	$13.89	1.3-2.15	7254K64	$13.89	4.33-8.98	7254K66	$13.89
0.322-0.65	7254K62	13.89	2.16-4.32	7254K65	13.89	8.99-16	7254K67	13.89
0.66-1.25	7254K63	13.89						

For information about electrical switches, see page 855. For information about motor switches and starters, see page 881.

If the full-load amp rating is not shown on your motor's faceplate, you can estimate the amp rating (given the motor's hp and voltage) using a chart. Go to mcmaster.com and search for **7603KAC**.

Heavy Duty Motor Starters

A NEMA-size contactor and solid state overload relay extend motor life and reduce energy costs in demanding applications. Motor starters have encapsulated coils that protect against moisture, heat, dirt, and mechanical and thermal stress. They are three phase, activate via an electrical signal (control voltage), and can be operated remotely. The adjustable overload relay allows you to set the exact overload amperage you need. The relay also provides phase-loss protection and has a tripping accuracy of ±1%. All have screw terminal or screw clamp connections and come with a normally open (NO) auxiliary contact for additional signaling capability.

NEMA contact sizes 0-1 are universal mount, which fit Cutler-Hammer, GE, and Square D installations. A mounting adapter (sold separately) is required to fit Allen-Bradley and Westinghouse installations.

Enclosed starters are rated NEMA 1 for indoor use.

Note: Ensure the full-load amp rating of your motor falls within the starter's adjustable overload amp range. Match control voltage to your control circuit; your motor voltage may be different.

To Order: Please specify control voltage: 24 AC, 110/240 AC, 208 AC, or 220/480 AC.

Heavy Duty Manual Motor Starter Components

Combine these switches and thermal overload elements to build heavy duty three-phase starters for high-amp-rated motors. Also known as NEMA starters, they have screw terminal connections. UL listed.

Indoor enclosure is rated NEMA 1. **Oil-tight enclosure** is rated NEMA 12. Both are made of steel.

Thermal Overload Element—**To Order:** Please specify the full-load amp rating of your motor from 0.36 to 26.8 amps.

Heavy Duty Overload Relays

Upgrade starters that use thermal overload protection with these solid state overload protection relays. They don't use heater elements, so enclosure ventilation and cooling is not required. Relays have a full-load amp adjustment dial to accommodate circuits with different full-load amp ratings. They also provide phase-loss protection. All are adjustable to trip in 5, 10, 20, or 30 seconds (Class 5, 10, 20, and 30 overload protection).

Relays have one normally open (NO) and one normally closed (NC) built-in auxiliary contact and screw terminal connections. UL listed and CSA certified.

Energy-Saving Motor Starters

Reduce the starting current to your motor, saving electricity and extending motor life. These soft starters gradually start and stop your three-phase, 208- to 600-volt AC motors. Acceleration time adjusts from 1 to 20 seconds; deceleration time adjusts from 0 to 20 seconds. Starters accept a control voltage of 24 DC and are primarily used on motors where the torque varies, such as pumps, compressors, and conveyors. Enclosure is plastic and can be surface or DIN-rail mounted except 7112T48 is surface mount only. See page 915 for DIN rail. Starters include a remote indicator contact for adding a signal, alarm, or other device (sold separately). UL and C-UL listed and CE marked.

Thermal Overload Element—**To Order:** Please specify the full-load amp rating of your motor from 0.1 to 32 amps.

Low-Voltage DC Motor Speed Controls

Control the speed of low-voltage, permanent-magnet DC motors. These accept DC input voltage and supply a variable DC voltage output. Adjust the speed and current limit of the motor as well as set a minimum and maximum speed with the included variable switch (potentiometer) or with an external input signal (not included). Controls have an open design, overload protection, and screw terminal connections. C-UL listed.

For hp	DC Voltage Output	Input	Amps	Ht.	Wd.	Dp.

3/4, 1	12/24	12/24	60	7.8″	6.9″	3.3″	7729K11	394.78

For information about electrical switches, see page 855. For information about motor switches and starters, see page 881.

ⓘ If the full-load amp rating is not shown on your motor's faceplate, you can estimate the amp rating (given the motor's hp and voltage) using a chart. Go to mcmaster.com and search for **7603KAC**.

Programmable Three-Phase AC Motor Speed Controls

DIN-Rail Mount

Indoor Enclosure

Washdown Enclosure

Vary the speed of three-phase, 230- or 480-volt AC motors with these easy-to-program speed controls. All have built-in thermal overload protection, forward/reverse control, and adjustable acceleration/deceleration times. They accept a 4- to 20-mA or 0- to 10-volt DC signal to control speed, or you can wire a variable switch (potentiometer) for remote manual control. UL and C-UL listed and CE marked.

DIN-Rail Mount—Can be installed inside a control panel or surface mounted. Enclosure is plastic. Output frequency is 0 to 320 Hz.

Indoor and **Washdown Enclosures—**Made of steel. Output frequency is 0 to 120 Hz. Indoor is rated NEMA 1; washdown is rated NEMA 4.

Three-Phase AC Motor Speed Controls

A compact alternative to programmable controls, these take a single-phase input and allow you to manually control the speed of a three-phase motor. Controls have an open aluminum chassis design for mounting inside your machine or control cabinet. Use in packaging machines, conveyors, and vacuum equipment. Controls also have forward and reverse capabilities as well as a variable switch (potentiometer) for remote speed adjustment. Internal adjustments let you control the maximum speed, acceleration/deceleration times, run and jog speed modes, and torque boost. Output frequency range is 0 to 120 Hz. UL and C-UL listed.

Input kit allows controls to accept an input of 0 to 5 volts DC, 0 to 10 volts DC, or 4 to 20 mA. It mounts on the bottom of the controls.

For hp	AC Voltage Output	AC Voltage Input	Ht.	Wd.	Dp.		
1/15-1/2	230	115/230	3.0″	4.3″	3.7″	6488K21	$318.79

Input Kit						6488K31	80.17

AC to DC Motor Speed Controls

Open

Indoor Enclosure

Washdown Enclosure

Supply a single-phase AC voltage and you'll get a variable DC voltage to control the speed of a 90- or 180-volt DC permanent-magnet motor. Controls have an on/off switch, knob for DC output adjustment (except open control has a variable switch), and screw terminal connections. UL and C-UL listed. *Reversing* controls allow you to reverse the motor's shaft rotation.

Indoor enclosure is steel and rated NEMA 1.

Washdown enclosure is plastic and rated NEMA 4X.

Heat sinks are required for open and indoor enclosure controls when an output greater than 5 amps is needed.

Three-Phase AC Voltage-Monitoring Controls

Plug-In

DIN-Rail Mount

Surface Mount

Protect three-phase motors from phase loss and reversal, voltage imbalance, and over/under voltage. Also known as voltage-monitoring relays, these controls monitor your system and cut power to your motor when a fault occurs. All switch one circuit on or off (SPDT) and are rated 10 amps @ 240 volts AC.

Plug-in control has eight pins and a trip-delay range of 0.25 to 30 seconds to prevent nuisance tripping. Voltage imbalance adjusts from 2% to 10%. UL recognized and CSA certified.

DIN-rail mount controls have a trip-delay range of 1 to 30 seconds to prevent nuisance tripping. Voltage imbalance adjusts from 2% to 10%. They have screw terminals and can also be surface mounted. Rated 1/3 hp @ 240 volts AC. UL and C-UL listed.

Surface-mount controls have a memory function to store the last 10 fault conditions, allowing you to diagnose voltage problems. They have a trip-delay range of 0.25 to 30 seconds. Switch between automatic restart and delayed automatic restart (adjusts from 0.25 to 64 seconds after tripping). They have screw terminals. UL listed and CSA certified.

Socket is DIN-rail or surface mountable. It has two 5/32″ dia. mounting holes (hardware not included).

Air-Actuated Switches and Components

Keep your live electrical circuit away from yourself and your work area. Choose a complete switch or build your own with switch components (you'll need a switching mechanism and an actuator).

Complete Switches— Include 10 feet of tubing. ***Hand-operated*** switches are rated 20 amps @ 125/250 VAC. They have three 0.187″ quick-disconnect connections and are UL recognized. ***Foot-operated*** switches allow you to plug your device directly into the switch controller. The controller has a standard NEMA 5-15 three-prong receptacle on one side and a standard NEMA 5-15 three-prong plug that plugs into a 115 VAC wall outlet on the other. Rated 15 amps @ 120 VAC. UL listed and CSA certified. Switches *with guard* prevent accidental switch actuation. The guard is plastic and measures 6″ Lg. × 6½″ Wd. × 4 11/16″ Ht.

Switch Components— You'll need a switching mechanism and an actuator (sold separately). ***Switching mechanisms*** are rated 21 amps @ 250 VAC and have ¼″ quick-disconnect connections. ***Actuators*** have 6½ feet of tubing.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary.

Light Duty Foot Switches

Ideal for intermittent use, these economical switches have a nonskid rubber base.

Switches— Switches with three-prong adapters simplify connections from plug-in equipment to power source. ***Single pedal plastic*** switch is lighter and more corrosion resistant than steel. UL recognized. **To Order:** Please specify color: blue, gray, or yellow. ***Single pedal steel front hinge*** switches pivot at the front of the switch, providing an ergonomic design to reduce user fatigue. UL and C-UL listed. ***Single pedal steel back hinge switches—*** 7376K1 is UL listed, CSA certified, and CE approved. 7376K2 is UL recognized, CSA certified, and CE approved. 7376K3 is UL and C-UL listed. ***Twin pedal steel back hinge*** switch has a divider bar to keep both switches from being operated by the same foot. Has mounting holes for size 8-32 screws. UL listed, CSA certified, and CE approved. ***Single pedal stainless steel*** switches have a watertight internal switch. They meet NEMA 6P for water submersion and resistance to corrosives. *Front hinge* switches pivot at the front of the switch for an ergonomic design. Meet IP67. UL and C-UL listed. *Back hinge* switches meet IP68. UL recognized. ***Single pedal die cast zinc interlocked*** switches have a pedal that works like a teeter-totter, preventing both circuits from activating at the same time. UL recognized.

Optional Guards— All are steel except 9518T21 and 6603K75, which are stainless steel.

Medium Duty Foot Switches

Standard

Twin with Optional Guard

Wide Pedal

Harsh Environment

3-Prong Adapter

More durable than light duty foot switches, these switches are cast iron and have a nonskid base pad. They also have an adjustable strain-relief connector. Mounting hardware not included. Maximum voltage is 250 VAC/28 VDC, unless noted. All are UL listed and CSA certified, except 7024K3, K4, and K42, which are UL recognized.

Single pedal standard switches have two 0.22″ mounting holes. 7614K32 has a three-prong adapter to simplify connections from plug-in equipment to power source. Maximum voltage for 7614K32 is 125 VAC.

Twin pedal switch has a divider bar that prevents both switches from being actuated by the same foot. Has four 0.22″ mounting holes.

Single wide pedal switches are great for bulky footwear, providing a 7″ wide "target" for your foot. They have two 0.22″ mounting holes.

Single pedal harsh environment switches are rated IP68 and NEMA 4X, 6P, and 13 for washdown, corrosion, and oil resistance. Max. voltage is 277 VAC/24 VDC. They have three 3/16″ mounting holes.

Optional guards (for single pedal standard and twin pedal switches) prevent accidental switch actuation. Made of steel.

★ Amp rating @ 24 VDC.

Mil. Spec. Foot Switches

Without Bracket

Usually found in military vehicles, these tough switches are perfect for your plant. They are great for rugged DC voltage applications and meet MIL-S-13625 for shock and vibration protection. The green die cast zinc housing protects against salt and water. They switch one circuit from "off" to "on" (SPST-NO) and spring back (momentary). Both have two screw terminals. Rated 150 amps @ 28 VDC. Size is 3¾″ Ht.×2¾″ Wd.×2¾″ Dp. Switch ***with floor-mount bracket*** has two 1/4″-20 threaded mounting holes (hardware not included).

Without Floor-Mount Bracket	6801T11	$199.74
With Floor-Mount Bracket	6801T13	221.64

High-Pressure Air-Actuated Switch

Also known as an air-to-electric switch, this switch converts an air signal to an electrical signal. Requires 8-100 psi of air pressure to actuate. Air connection is 1/8″ NPT female; electrical connection is 1/2″ trade size NPSM (National Pipe Straight Mechanical) female conduit. Rated 15 amps @ 230 VAC. Has two 5/32″ dia. mounting holes (mounting hardware not included) and three solder-terminal connections. UL listed and CSA certified.

No. of Circuits Switched	Switch Action	Lg.×Wd.×Ht.		
1 (SPDT)	Springs Back (Momentary)	3.1″×1″×3.63″	49145K51	$108.47

Low-Profile Ribbon Switches

Great for detecting people or objects to control lights and alarms. Compact 3/16″ Ht.×3/4″ Wd. ribbon switches can be actuated with pressure anywhere along their entire length. They switch one circuit from "off" to "on" (SPST-NO) and spring back (momentary). All are rated 1 amp @ 28 VAC/VDC. Made of PVC. CE approved.

Ribbon with Molded Leads

Ready to use, they have sealed ends with two 18″ 18 AWG wire leads.

Lg.	Yellow Actuation Force		Gray Actuation Force

Vinyl Adhesive (1-oz. tube)	7504A11	$5.73		

Optional Mounting Channels

Made of extruded aluminum. Size is 7/8″ Wd.×1/4″ Ht. with 5/32″ mounting holes 7″ apart.

3-ft. Mounting Channel	7379K5	$13.89
6-ft. Mounting Channel	7379K6	25.56

For information about electrical switches, see pg. 855. For information about NEMA and IP ratings, see pg. 843.

Heavy Duty Foot Switches

Heavy duty construction handles just about anything a tough industrial environment can dish out—plus they meet NEMA 4 and 13 for washdown and oil resistance. All can be mounted to the floor or to your machinery (hardware not included). Switches have a ¾″-14 NPT female threaded conduit entry and screw-terminal connections, unless noted. Housing is cast iron, unless noted. UL listed.

Standard switches have three 0.31″ mounting holes. Guards are cast aluminum. CSA certified. Switches ***with oversized guard*** provide additional opening height to accommodate even the bulkiest safety shoes and foot guards. Switches with two stages allow you to actuate one piece of equipment at two speeds. Push the pedal halfway to actuate the first stage (slow speed) or all the way to actuate the second stage (high speed). ***Single-pedal push-to-unlock*** switches have a safety lever inside to prevent accidental actuation. You must push the lever forward with your toes before you can depress the foot pedal.

Harsh environment switches also meet IP68 and NEMA 6P for protection against water submersion and corrosive agents. They have four 0.28″ mounting holes and guards are steel on switches with guards, unless noted.

Single-pedal switches have a cast aluminum housing and a ½″-14 NPT female threaded conduit entry. CSA certified. ***Twin-pedal*** switches have a divider bar to prevent both switches from being actuated at the same time. Housing is cast aluminum. CSA certified. ***Low-profile*** switches are just 1½″ tall, so they fit in very tight spaces. Housing is polished aluminum. Maximum voltage is 250 VAC. *Twin switches* have a divider bar to prevent both switches from being actuated at the same time. ***Single-pedal positive break*** switches have snap-action normally closed contacts that instantly open to switch the circuit from "on" to "off." They mechanically disengage even if contacts weld or the spring breaks. Enclosure has PG-16 female threaded conduit entry and three 0.31″ mounting holes. (See page 842 for a PG-to-½″ NPT thread adapter.) Switch includes a cast aluminum guard. CE approved.

✓ Switch wired normally open. ★ Amp rating @ 24 VDC.

Heavy Duty Variable-Output Foot Switches

Install these switches to vary the speed of larger motors with variable-speed motor drives. Also called potentiometers, they adjust resistance to vary output current. You can wire them to either increase or decrease the speed when you press down. They have an auxiliary contact that switches one circuit from "off" to "on" or "on" to "off" (SPDT) and springs back (momentary). The auxiliary contact is rated 15 amps @ 125/250 VAC. Max. voltage is 250 VAC/500 VDC. Both switches have three solder-lug connections, an additional three 0.187″ quick-disconnect connections for the auxiliary contact, and a ¾″-14 NPT female conduit entry. They have three 5/16″ mounting holes (hardware not included). Base is cast iron and guard is cast aluminum. Meets NEMA 4 and 13 for washdown and oil resistance. UL recognized. **To Order:** Please specify maximum resistance.

Without Guard

	Watt Rating	Lg. × Wd. × Ht.	Available Max. Resistance, Ohms		
Without Guard	2 watts @ 500 VDC	8⅜″ × 4 1/16″ × 3 5/32″	100, 250, 500, 1K, 2.5K, 5K, 10K, 15K, 1M, 5M	**6817K11**	$304.52
With Guard	2 watts @ 500 VDC	9⅛″ × 5⅞″ × 5 1/32″	100, 250, 500, 1K, 2.5K, 5K, 10K, 15K, 1M, 5M	**6817K31**	348.78

For information about electrical switches, see pg. 855. For information about IP and NEMA ratings, see pg. 843.

Switch Mats

With Beveled Ramp Edges

These switches let you walk all over them. Ideal for opening doors and other hands-free tasks (not intended for use as an emergency stop or safety control switch). As little as 10 to 15 lbs. of pressure actuates an internal switch that switches one circuit from "off" to "on" (SPST-NO) and springs back (momentary). They are made of durable molded vinyl to resist most harsh industrial liquids. Mats are 3/8″ thick and come with a 6-ft. molded cord with two 18 AWG wire leads (10-ft. cord on mats with aluminum ramp edges). Rated 4 amps @ 24 VAC/VDC. Max. capacity is 3,000 psi. Mats ***with beveled ramp edges*** are brown. Mats ***with aluminum ramp edges*** are black and can be secured to the floor. The ramp edges snap on to the mat.

Control box lets you control one or more 120 VAC devices (drawing up to 15 amps) from a switch mat. Box has two standard three-prong outlets: one normally on, the other off. Box has 6-ft. cord with three-prong plug that plugs into a 120 VAC outlet. Size is 5″ Ht.×4″ Wd.×3″ Dp.

O'all Size			O'all Size		
With Beveled Ramp Edges			***With Aluminum Ramp Edges***

Control Box 7351K41 $211.64

Mighty-Thin Switch Mats

Extra-thin (3/32″ thick) mats work great under carpeting or anywhere you want the mat to be hidden. They switch one circuit from "off" to "on" (SPST-NO) and spring back (momentary). All are rated 1 amp @ 24 VAC/VDC. Made of green PVC.

Mats are UL listed. The 25-ft. long ***cut-to-length roll*** can be cut to your requirements (roll width cannot be cut).

♠ Has two bare wires for soldering or crimping a connector.

Mini Switch Mats

Ideal for actuating machinery, doors, and alarms with the touch of a foot, these pliable molded vinyl mats have an overall size of just 6″×8″ and are 3/8″ thick. They have a corrugated surface, switch one circuit from "off" to "on" (SPST-NO), and spring back (momentary). Both have a 15-ft. cord with two 18 AWG wire leads. Rated 4 amps @ 24 VAC/VDC. Max. capacity is 3,000 psi. Color is black.

	Actuation Force		
Standard	10-15 lbs.	7374K31	$75.85
Water Resistant	10-15 lbs.	7374K42	81.23

Safety Bumper Switches

Prevent power-operated doors from closing on a person or an object. Use these switches with switch mat controllers for a four-wire system that will turn machinery off if the switch is actuated or if a fault is detected (see 7666K91-K94 on this page for switch mat controllers).

The switch bumper is made of black Santoprene, a thermoplastic elastomer with excellent weather and chemical resistance. Aluminum channel (included) mounts directly to the edge of your door using 1/8″ dia. screws (included). All meet IP67 for temporary submersion. Lengths cannot be cut.

They switch one circuit from "off" to "on" (SPST-NO) and spring back (momentary). Include two 72″ long cords and each cord has two 20 AWG wire leads. Rated 1 amp @ 28 VAC/VDC. CE approved.

Lg.	Actuation Force			Lg.	Actuation Force		
2 ft.	10 lbs.	7703K41	$209.02	6 ft.	10 lbs.	7703K44	$319.78

4 ft.	10 lbs.	7703K47	261.27	10 ft.	10 lbs.	7703K46	430.50
5 ft.	10 lbs.	7703K43	287.39	12 ft.	10 lbs.	7703K48	480.33

Safety Switch Mat System

Guard your machinery and protect your personnel. Select a switch mat and a switch mat controller (sold separately below) for a four-wire system that will turn machinery off if someone steps on the mat or if a fault is detected. All meet ANSI/RIA 15.06-1999 and conform to OSHA safety requirements.

Switch Mats— Made of PVC and have a beveled edge. All switch one circuit from "off" to "on" (SPST-NO) and spring back (momentary). They include a 6-ft. molded cable with four 18 AWG wire leads. IP65 and NEMA 4 rated for washdowns. Rated 1 amp @ 24 VAC/VDC. ***Standard mats*** are for occasional foot traffic and require an actuation force of 22 lbs. Mats are 1/2″ thick with a maximum weight capacity of 1,100 psi. Choose black or yellow. ***High-abuse mats*** can withstand repeated impact from heavy and sharp objects (such as dropped tools or sheet metal) and require an actuation force of 20 lbs. Mats are 5/8″ thick and have a maximum capacity of 1,500 psi. Color is black.

Switch Mat Controllers— Have an output rating of 4 amps @ 240 VAC. UL and C-UL listed, CE approved. ***Manual-reset*** controllers prevent accidental restarts, requiring the use of a separate reset switch to turn your machinery back on (sold separately on pages 855-864). The reset switch must switch one circuit from "off" to "on" (SPST-NO) and spring back (momentary). The controllers switch two circuits from "on" to "off" (DPST-NC) and spring back (momentary). ***Auto-reset*** controllers reset when the operator steps off the mat. Great for applications where the mat will be frequently actuated. They switch two circuits from "off" to "on" or "on" to "off" (DPDT) and spring back (momentary).

Optional Trim Kits— Consist of an extruded aluminum frame that firmly secures the switch mat to the floor with screws (not included) and provides a smooth transition from floor to mat.

Bumper Switches

Switch with Mounting Channel

Often used to signal when a door closes or an item reaches the end of a conveyor, these switches are sensitive along their entire length. They are made of heavy duty flexible urethane and are completely sealed and insulated for excellent weather resistance. Lengths cannot be cut. Use alone or with the optional aluminum mounting channel for surface mounting to walls or conveyors (mounting hardware included).

Switches are 1″ wide with a 1/2″ radius half-round shape. All have a 2-ft. cord with two 18 AWG wire leads. Switch one circuit from "off" to "on" (SPST-NO) and spring back (momentary). Amp rating is 4 amps @ 24 VAC/VDC.

To Order: For switches, please specify color: black, red, or yellow.

Length	Actuation Force	Switches		Optional Mounting Channel

Snap-Acting Switches

Pin Plunger — *Large Plunger* — *Roller Plunger* — *Cross Roller Plunger* — *Short Roller Lever* — *Long Roller Lever* — *Rigid Lever*

Rapid "snap" closing action minimizes arcing to extend switch life and prevent "hang-up" between the on and off positions. Switches spring back (momentary) and have a 0.95″ Ht.×1.94″ Wd.×0.69″ Dp. plastic housing. They have two 0.17″ diameter mounting holes (except 7090K, which have 0.14″ diameter mounting holes) spaced 1″ apart, center to center (hardware not included). UL recognized and CSA certified.

One-circuit switches have three terminals. Switches *with screw terminals* are rated 15 amps and ¼ hp @ 250 VAC. Maximum voltage is 480 VAC/250 VDC. Switches *with solder terminals* are rated 15 amps @ 250 VAC. Maximum voltage is 250 VAC/VDC.

Two-circuit switches have six screw terminals and are rated 10 amps and ¼ hp @ 250 VAC. Maximum voltage is 480 VAC/250 VDC.

♦ Can be panel mounted in a ½″ dia. cutout. ● Lever length is 1.2″.

High-Temperature Snap-Acting Switches

Pin Plunger — *Roller Lever* — *Rigid Lever*

Other snap-acting switches just can't take the heat. Thanks to a ceramic housing, cobalt-alloy springs, and special alloy contacts, these switches operate at temperatures up to 752° F without breaking a sweat. Great for industrial ovens, rolling mills, semiconductor processing equipment, and other high-temperature applications.

All switch one circuit from "off" to "on" or "on" to "off" (SPDT) and have three 3.5 mm stud terminals with nuts. They spring back (momentary). Rated 1 amp @ 125 VAC/24 VDC. Maximum voltage is 250 VAC/125 VDC.

Size is 1.18″ Ht.×1.94″ Wd.×0.69″ Dp. They have two 0.14″ dia. mounting holes spaced 1″ apart, center to center (hardware not included).

	Actuation Force	Actuator Height (H)

Miniature Snap-Acting Switches

The slightest touch actuates these small, low-force operation switches. All switch one circuit from "off" to "on" or "on" to "off" (SPDT) and have three terminals, unless noted. They spring back (momentary). Max. voltage is 250 VAC/VDC, unless noted.

All are plastic and 0.63″ Ht.×1.1″ Wd.×0.4″ Dp. They have two 0.13″ dia. mounting holes spaced 0.87″ apart center to center (hardware not included), and are UL recognized and CSA certified.

♣ Max. voltage is 125 VAC. ■ Max. voltage is 125 VAC/30 VDC.
♠ Max. voltage is 277 VAC. ▲ Switches one circuit from "off" to "on" (SPST-NO); has two terminals.

For information about electrical switches, see page 855. For information about IP ratings, see page 843.

Subminiature Snap-Acting Switches

Standard Pin Plunger

Standard Roller Lever

Standard Rigid Lever

Washdown Pin Plunger

Washdown Roller Lever

Washdown Rigid Lever

Similar to the miniature switches on page 889, these switches are even smaller for use in very tight spaces. Their rapid "snap" closing action minimizes arcing to prevent welded contacts. All switches spring back (momentary), are rated 10 amps @ 250 VAC, and have two solder lug terminals, unless noted. Housing is plastic and size is 0.36″ Ht.×0.79″ Wd.×0.26″ Dp. Switches have two 0.09″ dia. mounting holes spaced 0.37″ center to center (hardware not included). UL recognized.

Washdown switches meet IP67 for temporary water submersion. They are also rated 1/4 hp @ 125 VAC.

Mil. Spec. Subminiature Snap-Acting Switches

Pin Plunger

Roller Lever

Rigid Lever

Sealed and encapsulated in a corrosion-resistant aluminum body, these switches withstand exposure to dirt and moisture and meet MIL-S-8805 for water tightness. They have a stainless steel plunger surrounded by a silicone rubber seal and two epoxy-sealed 1-ft. long 20 AWG wire leads, unless noted.

All spring back (momentary) and are rated 5 amps @ 125/250 VAC. Maximum voltage is 250 VAC/28 VDC. They have two 0.09″ dia. mounting holes spaced 0.38″ center to center (hardware not included).

Precision Subminiature Snap-Acting Switches

Pin Plunger

Roller Lever

Rigid Lever

If you need precise on/off control, here are the switches to use. They only need a minute amount of motion to activate and are small enough to be used in tight spaces. Switches have a rapid "snap" closing action that minimizes arcing, preventing welded contacts. They switch one circuit from "off" to "on" or "on" to "off" (SPDT) and spring back (momentary).

All are rated 5 amps @ 250 VAC and have three solder lug terminals. Maximum voltage is 250 VAC/30 VDC. Housing is plastic and is 0.36″ Ht.×0.78″ Wd.×0.25″ Dp. They have two 0.09″ dia. mounting holes spaced 0.38″ center to center (hardware not included). UL recognized, CSA certified, and CE approved.

Bottom Mount Roller Lever

Bottom Mount Dual Switch Roller Lever

Ideal for applications involving water, oil, sand, dirt, vibration, and even shock, these switches have a corrosion-resistant 300-series stainless steel switch bracket and are encased in rubber. They are IP68 rated for water submersion. All spring back (momentary) and are rated 5 amps @ 120 VAC. Maximum voltage is 240 VAC/28 VDC.

Side-mount switches switch one circuit from "off" to "on" or "on" to "off" (SPDT) and have three 24″ long 18 AWG wire leads, unless noted. *Roller lever* and *simulated roller* switches are 1.42″ Ht.×1.75″ Wd.×0.99″ Dp. and have two 0.22″ wide mounting slots spaced 1″ center to center (hardware not included). *Rigid lever* switch is 1.13″ Ht.×1.75″ Wd.×0.86″ Dp. and has two 0.27″ dia. mounting holes spaced 1″ center to center (hardware not included). It has three 24″ 16 AWG wire leads. Switch with *dual simulated rollers* has two SPDT switches, two actuators, and six 24″ 18 AWG leads. It is 1.26″ Ht.×1.75″ Wd.×2.56″ Dp. Includes two 1/4″-20 mounting nuts spaced 1″ center to center.

Bottom-mount switches mount on a flat surface. *Roller lever* switches one circuit from "off" to "on" or "on" to "off" (SPDT) and has three 24″ long 16 AWG wire leads. It is 0.34″ Ht.×1.75″ Wd.×1.75″ Dp. and has two 0.2″ wide mounting slots spaced 1.34″ center to center (hardware not included). *Dual switch roller lever* actuates two SPDT switches simultaneously, giving you the equivalent of a DPDT switch. It has six 24″ long 18 AWG wire leads. Size is 0.34″ Ht.×1.75″ Wd.×2.5″ Dp. It has two 0.22″ dia. mounting holes spaced 2.16″ center to center (hardware not included).

For information about electrical switches, see pg. 855. For information about NEMA and IP ratings, see pg. 843.

Miniature Corrosion-Resistant Snap-Acting Switches

The small size and single mounting slot give you the versatility you need. Switches withstand water, salt spray, humidity, dirt, dust, sand, and oil.

Both switch one circuit and spring back (momentary). They're rated 100 mA @ 120 VAC/12 VDC and have two 24″ long 18 AWG wire leads. The lever is Type 17-7 PH stainless steel and mounting slot is Type 302 stainless steel. Housing is plastic and is 0.27″ Ht.×2.47″ Wd.×0.63″ Dp. Switches have a ¼″ dia. mounting hole (hardware not included).

Before Switching, Circuit Is	Industry Designation	Actuation Force	Actuator Height (H)

Side Mount Standard Roller Lever

Bottom Mount Washdown Rod Lever

A rugged die cast zinc housing withstands physical abuse. These switches switch one circuit from "off" to "on" or "on" to "off" (SPDT) and spring back (momentary). Rated 15 amps and ¼ hp @ 250 VAC. All have three internal screw terminal connections. Maximum voltage is 480 VAC/250 VDC. Housing is 1.75″ Ht.×3.04″ Wd.×1″ Dp. and has ½″ NPT female conduit entry. UL recognized and CSA certified.

Side-Mount Switches—Have two 0.14″ dia. mounting holes. They are spaced 1″ apart, center to center (hardware included).

Bottom-Mount Switches—Have two 0.17″ dia. mounting holes spaced 1.63″ apart, center to center (hardware not included).

Washdown switches are more durable than the standard switches and are NEMA 4 rated for washdowns.

Standard Roller Lever

Standard Adjustable Rod

Mini Pin Plunger

Mini Roller Lever with Actuator Rotated 90°

Mini Adjustable Roller Lever

Get the same rapid "snap" closing action of a snap-acting switch but with an actuator designed for larger objects. These limit switches switch one circuit from "off" to "on" or "on" to "off" (SPDT) and spring back (momentary). UL listed.

Standard switches are rated 10 amps @ 300 VAC. Maximum voltage is 300 VAC. Housing is rugged die cast aluminum and rated IP67 for temporary water immersion. All have four internal screw terminal connections. Switches have a ½″ NPT female conduit entry and four 0.20″ dia. mounting holes (hardware not included). 7076K14, K18, and K24 can be rotated 180° (in 90° increments) for additional mounting options.

Miniature switches are great for tight spaces. Rated 5 amps @ 250 VAC. Maximum voltage is 250 VAC/125 VDC. Housing is gasketed die cast zinc with a plastic cover and rated IP64 for protection against splashing water. They have five internal screw terminal connections. Switches have a 0.25″ dia. opening with a cord grip fitting for wiring, and come with mounting hardware. 7988K1-K3 can be rotated 360° (in 90° increments) for additional mounting options.

Hazardous-Location Limit Switches

Pin Plunger

Roller Plunger

Wobble Stick

Ideal for harsh applications in hazardous locations, these switches meet NEMA 7, Div. 1, Class 1, Groups B, C, D; and NEMA 9, Div. 1, Class 2, Groups E, F, G. They switch one circuit from "off" to "on" or "on" to "off" (SPDT) and spring back (momentary). Rated 10 amps @ 600 VAC. Maximum voltage is 600 VAC/250 VDC. All have five internal screw terminal connections. Housing is made of die cast aluminum and is 4″ Ht.×2.25″ Wd.×2.25″ Dp. Switches have a ½″ NPT female conduit entry and four 0.27″ dia. holes for mounting (hardware not included). UL listed and CSA certified.

Pin plunger has an adjustable actuator height.

For information about electrical switches, see pg. 855. For information about NEMA and IP ratings, see pg. 843.

Low-Profile Washdown Limit Switches

Have limited space for a limit switch? These are much slimmer than most other limit switches, plus they can be stacked together. They are IP67 and NEMA 4 and 13 rated for washdown and oil protection. All switch one circuit from "off" to "on" or "on" to "off" (SPDT) and spring back (momentary). Housing is die cast aluminum. Switches have two countersunk 0.20″ dia. mounting holes spaced 0.98″ apart, center to center (hardware not included). UL recognized and CSA certified.

Switches with sealed plunger protect the plunger from water and dirt.

Switches with cable are rated 5 amps @ 250 VAC. Maximum voltage is 250 VAC/250 VDC. They have a 9.8-ft., 18/4 AWG oil-resistant (SJTO) cable.

Switches with multipole connector are rated 1 amp @ 125 VAC. They have a 4-pin 0.3″ face dia. male plug with external threads, also known as a microconnector. Compatible with the *reverse keyway multipole connector cordset*, which lets you easily connect and disconnect the cordset from the switch. Cordset has a female plug on one end and four 18 AWG wire leads on the other. Has a PVC jacket. Sold separately. *Panel-mount* switches have M14 threads that allow you to mount through a 0.57″ dia. panel cutout.

Corrosion-Resistant Washdown Limit Switches

Built to withstand heavy use in wet environments, these switches are protected against temporary water submersion, oil, and corrosion. All spring back (momentary).

Standard switches meet IP67 and NEMA 4X, 6P, and 13. Housing is fully gasketed, rugged die cast zinc. Conduit entry is 1/2″ NPT female. They have two 0.20″ dia. front mounting holes (hardware not included). Maximum voltage is 600 VAC. UL listed and CSA certified. Switches that switch *one circuit from "off" to "on" or "on" to "off" (SPDT)* are rated 10 amps @ 240 VAC. They are 3″ Ht.×1.62″ Wd.×1.75″ Dp. and have four internal screw-terminal connections. Switches that switch *two circuits from "off" to "on" or "on" to "off" (DPDT)* are rated 5 amps @ 240 VAC. They are 3.5″ Ht.×1.9″ Wd.×1.8″ Dp. and have eight internal screw-terminal connections.

Compact switches are great for tight spaces. They have insulation piercing wire connections that stay put in high-vibration applications. Just strip the outer jacket of your cord and feed four wire leads into the twist-on connector for a secure connection. Switches are made of thermoplastic and are IP67 and NEMA 13 rated. Rated 6 amps @ 120 VAC, 3 amps @ 240 VAC, and 2.9 amps @ 24 VDC. Maximum voltage is 300 VAC/300 VDC. They are 3.2″ Ht.×1.2″ Wd.×1.2″ Dp. and have two 0.79″ dia. mounting holes (hardware not included).

Corrosion-Resistant Washdown Limit Switches with Cable

These switches are easy to connect because they're already wired. They have an 8-ft., 16/5 AWG oil- and water-resistant (SOOW) cable. All meet NEMA 4X, 6P, 13, and IP67 for temporary water submersion, oil, and corrosion.

They switch one circuit from "off" to "on" or "on" to "off" (SPDT) and spring back (momentary). Rated 10 amps @ 600 VAC. Max. voltage is 600 VAC/250 VDC. Housing is die cast zinc and is 3.13″ Ht.×1.54″ Wd.×1.58″ Dp. They have two 0.20″ dia. front mounting holes (hardware not included). UL listed and CSA certified.

Type 316 Stainless Steel Washdown Limit Switches

Roller Lever

Adjustable Roller Lever

Adjustable Rod

Stainless steel construction and fluorocarbon seals give these switches superior corrosion resistance. They're NEMA 4X, 6P, and 13 rated for temporary water submersion, oil, and corrosion protection. Switches withstand temperatures up to 250°F and pressurized steam cleaning.

All switches spring back (momentary) and are rated 10 amps @ 600 VAC. Maximum voltage is 600 VAC/240 VDC. Housing is 3.69″ Ht.×1.87″ Wd.×1.78″ Dp. and has two 0.20″ dia. mounting holes (hardware not included). They have a ¾″ NPT female conduit connection. UL listed and CSA certified.

One-circuit switches have five internal screw terminal connections.

Two-circuit switches have nine internal screw terminal connections.

Manual Reset Safety Limit Switches

Pin Plunger

Roller Plunger

Roller Lever

Adjustable Roller Lever

Prevent equipment from automatically restarting—these limit switches must be manually reset each time they're actuated, making them ideal for conveyors and elevators. Positive-force contacts interrupt the circuit when triggered, even if a spring fails or the contacts stick. Reset by pulling on the reset knob. They switch two circuits, one from "off" to "on" and one with positive force from "on" to "off" (DPST-NO/NC). Contacts stay switched (maintained) until they are manually reset. Switches are rated 10 amps @ 240 VAC with a maximum voltage of 300 VAC.

Housing is plastic, 2.5″ Ht.×1.2″ Wd.×1.2″ Dp., with two 0.17″ dia. mounting holes (hardware not included). All have four internal screw terminal connections, a ½″ NPT female conduit entry for wiring, and meet IP67 for temporary water submersion. UL listed and CSA certified.

Standard Plastic Adjustable Rod

Compact Plastic Pin Plunger

Compact Plastic Roller Plunger

Compact Plastic Center Roller Lever

Standard Die Cast Zinc Adjustable Roller Lever

A set of positive-force contacts in these switches opens the circuit when triggered—even if a spring fails or the contacts stick. All switch one circuit from "off" to "on" or "on" to "off" (SPDT) and spring back (momentary). Actuators can be rotated 360° (in 90° increments) for additional mounting options. Switches have a ½″ NPT female conduit adapter. Mounting hardware not included. CSA certified and CE approved. *Standard switches* have four 0.21″ dia. mounting holes. *Compact switches* have two 0.17″ dia. mounting holes.

Plastic housing switches are rated 10 amps @ 240 VAC and maximum voltage is 240 VAC. They meet IP65 and NEMA 4 for washdowns and have four internal screw terminal connections, unless noted. All are CSA-US certified except 65745K18, which is UL listed.

Die cast zinc housing switches have five internal screw-terminal connections. *Standard* switches are rated 10 amps @ 600 VAC and maximum voltage is 600 VAC/250 VDC. They meet IP67 and NEMA 4 and 13 for washdowns and oil protection. *Compact* switches are rated 10 amps @ 300 VAC and maximum voltage is 300 VAC/250 VDC. They meet IP66 and NEMA 4 and 13 for washdown and oil protection. All are UL listed.

● Rated 10 amps @ 600 VAC; maximum voltage is 600 VAC/250 VDC. Meets NEMA 13 and IP66 for resistance to oil and water. Has five internal screw terminal connections.

Ultra-Precision Pin Plunger Limit Switches

All it takes is a tiny 1-micron (0.00004″) push to actuate these sensitive switches. They're great for tasks requiring a high degree of accuracy, such as determining manufacturing tolerances and detecting minute expansions and contractions. Switches spring back (momentary) and are threaded on both ends (unless noted). Housing is nickel-plated brass with an activating pin. All include hardware for panel mounting. UL listed. Switches with a *standard* housing have a zirconium-oxide activating pin. Switches with a *washdown* housing meet IP67 for temporary water submersion and have a ruby activating pin.

Electromechanical output switches switch one circuit from "on" to "off" (SPST-NC) and are rated 50 mA @ 24 VAC and 2 mA @ 15 VDC. Both have two 2.6-ft. wire leads.

Solid state output switches have an NPN output (see page 896 for information on NPN) that requires a 5-36 VDC power supply. They have a 50 mA output rating. Have three 2.6-ft. wire leads.

Electromechanical Standard Housing

Washdown Housing

Housing	Actuation Force	Thread	Lg.		
Electromechanical Output					
Standard	1.8 oz.	M8×0.5 mm	21.5 mm	**6551K52**♣	$166.53
Washdown	2.7 oz.	M8×0.5 mm	25 mm	**6551K53**	273.31
Solid State Output					
Standard	2.7 oz.	M8×0.5 mm	29.5 mm	**6551K55**	233.90
Washdown	2.7 oz.	M8×0.5 mm	34 mm	**6551K56**	326.69

♣ Unthreaded switch end. Cable end has M8 thread.

For information about electrical switches, see pg. 855. For information about NEMA and IP ratings, see pg. 843.

Sealed Ball Plunger Limit Switches

Switches are completely sealed for use in the toughest applications and are impervious to oil, sand, mud, and ice. Plus, they have 9/16″-18 threads for mounting to a panel. They switch one circuit (SPST), spring back (momentary), and are rated 5 amps @ 28 VDC. Both include two 24″ long 16 AWG wire leads. Ball actuator is Type 440 stainless steel and housing is zinc-plated steel. 7282K11 is 1.3″ long and 7282K12 is 1.26″ long.

Before Switching, Circuit Is	Actuation Force	Actuator Height (H)		
Off (NO)	47.6 oz.	0.10″	7282K11	$68.34
On (NC)	47.6 oz.	0.10″	7282K12	70.24

Tilt Switches

Excellent as position indicators, machine limit switches, pump level controls, and manual motor controls, these switches actuate when tilted to a certain angle. They combine the reliability of electromechanical technology and the long life of solid-state technology. All switch one circuit from "off" to "on" (SPST-NO). Mounting screws are not included.

Switches are designed for horizontal mounting and are activated when tilted below the horizontal to the "make angle." They're deactivated when tilted above the horizontal to the "break angle." The differential angle, which is the total angle from make to break, is shown in the table below.

Style A has a polypropylene housing and two 7″ long 18 AWG neoprene-insulated wire leads with ring terminals that have #8 (0.17″ dia.) holes. Includes a mounting clip with three 0.19″ dia. mounting holes.

Style B has an ABS plastic housing and two 7″ long 18 AWG neoprene-insulated wire leads with spade terminals for #8 (0.17″ wide) studs. Includes a mounting clip with three 0.19″ dia. mounting holes.

Style C has an ABS plastic housing and two 8″ long 18 AWG cross-linked polyethylene wire leads with ends stripped ready for connection. The switch also has two 1/4″ dia. mounting holes.

	Amp Rating	Max. Voltage	Differential Angle		
A	0.1 amps @ 120 VAC/0.25 amps @ 24 VDC	120 VAC/60 VDC	15°	3108K1	$22.22
B	2.5 amps @ 120 VAC	220 VAC	15°	3108K2	28.78
C	10 amps @ 12 VDC	18 VDC	30°	3108K3	25.56

About Access Safety Switches (Interlock Switches)

Access safety switches, also known as interlock switches, prevent a machine from operating if an access panel or door is open, thereby protecting personnel from injury and the machine from damage. They're typically installed on access panels and doors. These switches are electrically connected to machine control circuitry to ensure that a machine will operate only when the access panel or door is closed.

All of the contacts that switch from "on" to "off" (normally closed or NC) in access safety switches are positive-force contacts. They mechanically disengage when a switch is actuated, even if the contacts become welded shut or a spring breaks. This feature provides additional safety for the equipment operator.

Key-Actuated Access Safety Switches

Styles D-F and H: Key can actuate from both top and side of switch.

Switch shown on access panel

These tamper-resistant switches ensure that a machine cannot operate when the guard door is open. Each switch comes with one key-like device that must be inserted into the switch before the machine can operate. The switch is usually mounted to the door frame, and the key is mounted to the door. When the door is opened, the key is removed from the switch causing the machine to shut down. Ideal for sliding doors and access panels. All contacts that switch from "on" to "off" (normally closed or NC) are positive-force contacts. All are rated for temporary water submersion except 65665K13, which is rated for washdowns. Switches have a 1/2″ NPT female conduit entry with screw terminals, unless noted.

Standard switches are made of thermoplastic. UL listed, CSA certified, and CE approved.

Switches with electric lock are for machines that take time to stop after they are turned off, delaying access to hazardous areas until conditions are safe. They function as standard key-actuated access safety switches, but with the added benefit of a locking mechanism that holds the key in place with 225 lbs. of force. The key is held until the switch receives a signal from your time delay relay, motion sensor, or position sensor (not included) that the machine's motion has stopped. Rated for temporary water submersion. All have a thermoplastic housing and are UL and C-UL listed and CE approved except 7787K11, which has a die cast aluminum housing and is UL listed, CSA certified, and CE approved.

Emergency override key works with *Style H*, allowing the user to bypass the electric lock feature.

Emergency Override Key (for Style H)									7787K81	14.26

★ Fasteners not included. ▲ Has a 3.2-ft. 20/4 AWG cable connection.

For information about electrical switches, see pg. 855. For information about NEMA and IP ratings, see pg. 843.

Rotating Arm-Actuated Access Safety Switch

Worried about replacing missing or damaged access safety switch keys? The rotating arm built into this switch mounts on top of a door to turn power off when the door is open. Switches two circuits, one from "off" to "on" and one from "on" to "off" (DPST-NO/NC). Switch springs back (momentary) and is rated 4 amps @ 230 VAC. The contacts that switch from "on" to "off" (normally closed or NC) are positive force. When the lever arm is 90° to the right as shown in the above left photo, the power is on and the machine can operate. When the switch rotates 4.5° counterclockwise, the NC contacts open and shut off the power. Door mounting slot is 1.7″ Lg. × 0.2″ Wd.

Switch has 0.16″ dia. mounting holes (hardware not included), four screw terminal connections, and an M20 threaded cable entry hole (see pages 839-842 for cord grips). Switch housing is made of thermoplastic. Meets IP67 for temporary water submersion. UL listed, CSA certified, and CE approved.

7785K45 ..... $81.96

Hinge-Actuated Access Safety Switch

If the space around your door is too tight for other access safety switches, just replace one of the hinges with this switch. Bolt the hinge into the existing mounting holes of your fixture and replace your other hinge with the included unswitched hinge.

Switches three circuits, one from "off" to "on" and two from "on" to "off" (3PST-1NO/2NC). Switch springs back (momentary) and is rated 2 amps @ 250 VAC. The contacts that switch from "on" to "off" (normally closed or NC) are positive force. When the switch rotates at least 4° the normally closed contacts open and shut off the power. Switch housing is thermoplastic, hinges are aluminum. Has M20 threaded female conduit entry (see pages 839-842 for cord grips) and six screw terminals. Meets IP65 for protection from water projected from a nozzle.

7777K48 ..... $146.67

Magnetically Actuated Switches

Standard AC-Rated Rectangular Switch

Standard AC-Rated Mini Rectangular Switch

Standard AC-Rated Cylindrical Switch

Standard AC-Rated Mini Cylindrical Switch

Tamper-Resistant Switch without Circuit-Monitoring Relay (Coded Magnet and Switch Sold Separately Below)

Tamper-Resistant Switch with Circuit-Monitoring Relay (Coded Magnet and Switch Sold Separately Below)

Since they have no moving parts to wear out, these switches provide long-term, trouble-free service. Each switch has two components, an enclosed reed switch and a permanent magnet. When the magnet comes within the sensing distance of the switch, the switch actuates. When the magnet moves away, the switch resets. The magnetic switch is normally mounted on a stationary unit such as a door frame while the magnet is mounted on a movable part such as a door. Switches with a threaded cylinder include two hex nuts for mounting.

Standard switches are designed for use in proximity-sensing applications such as detecting when a door or window is open. They are not for use on safety-guard doors found on machinery. Mounting hardware not included, unless noted. *AC rated switches* are rated NEMA 4X for washdown and corrosion resistance. Housings are nylon, except for 65985K73 which is stainless steel. They come with 3 ft. of 34/2 AWG cable (unless noted). *DC rated switches* have thermoplastic polyester housings. They come with two 6″, 24 AWG wire leads except 65985K12 and K14, which have three. UL recognized.

Tamper-resistant switches are similar to the magnetically actuated switches above, but with tamper-resistant, coded magnets to prevent bypassing with a simple magnet or improperly coded magnet. Each switch assembly consists of two components—a coded enclosed reed switch and a coded magnet, each sold separately below. Switches and magnets have a fiberglass-reinforced thermoplastic housing. All switches come with 3 ft. of wired, sealed, 23/4 AWG cable and meet IP67 for temporary water submersion. UL listed, CSA certified, and CE approved.

Switches *without circuit-monitoring relay* are compact for space-restricted areas. The coded magnet includes hardware.

Note: In safety applications (such as machine guarding) these switches must be used with a safety circuit-monitoring controller (see 7773K on page 914).

Switch *with circuit-monitoring relay* eliminates the need for extra components and wiring. When the machine guard is closed, the matched magnetic field aligns with the switch and the switch closes. At the same time, the safety relay is constantly checking for faults in safety circuits, components, and wiring. Relay operates on 24 VDC.

● Comes with 3 ft. of 24/2 AWG cable.

About Proximity Switches

Proximity switches, or sensors, provide noncontact object detection at very close ranges (typically under 15 mm, or 0.6″).

Metallic-object proximity switches (also known as inductive switches) detect metallic objects. They're highly resistant to dirt, humidity, oil, and dust, and have epoxy-encapsulated (potted) circuitry to protect against shock, vibration, and contamination. The ***sensing distance*** listed for these switches is for mild steel. For other materials, multiply the sensing distance by the correction factor—*Type 400 stainless steel:* 1.15; *aluminum foil:* 0.90; *Type 300 stainless steel:* 0.70; *aluminum:* 0.35; *copper:* 0.30.

Universal-object proximity switches (also known as capacitive switches) detect metallic and nonmetallic objects including liquids and powders. They can also "see through" nonmetallic tank walls.

Proximity switches have solid state, low current outputs. DC switches have a transistor that is classified as NPN or PNP. NPN switches, often called sinking switches, must be connected so that the current flows from the positive voltage supply through the load to the switch (current "sinks" through the load to the sensor). PNP switches, often called sourcing switches, must be connected so that the current flows from the positive voltage supply through the switch to the load (sensor is "source" of current to the load).

Flush mount switches (also known as shielded switches) can be mounted in metal that is even with the sensor surface.

Non-flush-mount switches (also known as unshielded switches) require the area around the sensing surface to be metal free.

3-Wire DC Metallic-Object Proximity Switches

Don't see the proximity switch you need? Just tell us what you're looking for and we'll get it for you.

3-Wire DC Metallic-Object Proximity Switches

Flush-Mount Switch with Cable

Male Plug Configurations

All that mate with 7138K14

All that mate with 6897K26 and K36

Non-Flush-Mount Male Plug

Detect metallic objects without coming into contact with them. Also known as inductive proximity switches, these switches have short-circuit, overload, and reverse-polarity protection. They operate on 15-34 VDC, have a 150 mA output rating, and have a temperature range of –13° to +185° F, unless noted. Meet IP67 requirements for washdown. UL listed and CE approved.

Switches with cable include a 6½-ft., 3-wire cable with stripped wire leads.

Switches with male plug allow you to quickly connect and disconnect for changeout and repair.

Matching female plugs with cable mate with male plug switches. They include 12 ft. of 3-wire cable. For more information about female plugs with cable, see page 774 for 7138K and page 775 for 6897K.

Plated-brass switches resist corrosion. *Stainless steel switches* are made of Type 303 stainless steel for superior corrosion, impact, and abrasion resistance.

▲ Operate on 10-30 VDC, have a 200 mA output rating, and have a temp. range of –13° to +158° F. ★ Switch has three poles.

Don't see the proximity switch you need? Just tell us what you're looking for and we'll get it for you.

Flat Body 3-Wire DC Metallic-Object Proximity Switches

With a space-saving, flat-body design, these switches easily mount to a base or rail. Switches detect metallic objects without coming into contact with them and have reverse polarity protection and normally open (NO) contacts. Choose from non-flush-mount switches with an ABS plastic body and flush-mount switches with a rugged, die cast aluminum body. All come with a 6½-ft. cable with wire leads and two mounting holes (7364K21 and K22 also include a mounting bracket for stability). They operate on 10-30 VDC, have a temperature range of –13° to +158° F, and meet IP67 requirements for washdown.

2-Wire AC Metallic-Object Proximity Switches

These two-wire AC switches detect metallic objects without coming into contact with them. All have an LED power indicator and are offered with normally open (NO) or normally closed (NC) contacts. Meet IP67 requirements for washdown and temporary submersion. CE approved.

Switches with cable accept 20-265 VAC and 20-320 VDC input. They have a 6½ ft., 2-wire cable with wire leads. Temperature range is –13° to +185° F. UL listed.

Switches with male plug allow you to quickly connect and disconnect for replacement and repair. They accept 20-250 VAC input. Switches with stainless steel housing also operate on 20-320 VDC. Temp. range is –13° to +158° F. CSA certified to UL Standard 508. **Also Available:** Matching female plug with cable that mates with the male plug switches to supply power. It also includes 12 ft. of 3-wire cable (one wire is unused). Please ask for 6897K86 for plated brass housing and 6897K26 for stainless steel housing. For more information about female plugs with cable, see 6897K on page 775.

Plated-brass switches are nickel plated for corrosion resistance.

Stainless steel switches have superior corrosion, impact, and abrasion resistance.

Universal-Object Proximity Switches

Also known as capacitive proximity switches, these non-flush-mount switches detect both metallic and nonmetallic objects. They have a plastic housing that meets IP66 requirements for washdown and a 6½-ft. cable with wire leads. The LED indicator illuminates when target is detected. Temperature range is –13° to +158° F, except for 15 mm sensing distance switches, which have a temperature range of 14° to 131° F.

To Order: Please specify normally open or normally closed switches. Normally open switches switch "on" when an object is detected; normally closed switches switch "on" when no object is present.

★ Has slotted 0.28″ dia. mounting holes.

Proximity Switch Tester—Verify circuit integrity of DC proximity switches with this portable tester. You'll hear a distinct beep when the sensor output is conducting. Tester has two LED indicator lights; red indicates PNP and green indicates NPN. Three spring-loaded terminals make connection a snap. Powered by two 9-volt batteries (included). CE approved.

6555K33 ..... $97.50

About Light Beam Sensing Switches

Object-Reflecting Style

Reflector Style

Two-Piece Style

Also known as photoelectric switches, these switches detect the presence or absence of an object made of any material by using a light beam. They have a longer sensing distance than proximity switches.

Switches operate in one of two different modes. ***On when object present*** generates an output when a target object is present (similar to a normally open switch). ***On when object absent*** generates an output when the target object is absent (similar to a normally closed switch).

Response time is the amount of time it takes to generate an output when an object's presence or absence is detected.

Object-Reflecting Switches— Light source and receiver are in the same housing. Switches detect the target object when the light beam reflects off of the target object back into the receiver. They have the shortest sensing distance of the light beam sensing switches, and may be adversely affected by the color or surface of the target object.

Reflector Switches— Light source and receiver are in the same housing, but switches utilize a reflector. Switches detect the target object when it passes between the switch and the reflector, interrupting the beam. They have a longer sensing distance than object-reflecting switches.

Two-Piece Switches— Light source and receiver are in separate housings that must be lined up facing each other. The switch detects the target object as it breaks the light beam between the light source and receiver. These have the longest sensing distance of the light beam sensing switches.

Light Beam Sensing Switches

With Cable

These switches have a signal strength indicator and water tight plastic housing rated for outdoor use (NEMA 4). They're threaded and have a built-in output signal amplifier. Temperature range is –13° to +131°F. UL recognized, CSA certified, and CE approved. *Reflector* switches include the reflector.

DC Input—On When Object Present or Absent (Selectable)

Operate on 10-30 VDC, have a 100 mA output rating, and have short-circuit protection. Response time is 2.5 milliseconds for object-reflecting switches and 1 millisecond for reflector switches. Size is 18 mm dia.×65 mm Lg. Choose from switches with 6½ ft. of 4-wire cable or switches with a 4-pin, single keyway male plug. **To Order:** Please specify NPN or PNP output (see about proximity switches on page 896).

Switch Style	Sensing Distance	With Cable		With Male Plug	
Object Reflecting	4″	65845K1	$93.30	65845K3	$99.64
Reflector	13.1 ft.	65845K7	88.93	65845K8	93.30
Female Plug with Cable for 65845K3 and K8		6897K36	$32.56		

AC Input—With Cable

Operate on 24-240 VAC and have a 200 mA output rating. Response time is 30 milliseconds. Size is 18 mm Dia.×90 mm Lg. Switches come with 6½ ft. of 3-wire cable.

Switch Style	Sensing Distance	On When Object Present		On When Object Absent	
Object Reflecting	4″	65845K46	$107.14	65845K47	$107.14
Reflector	6.5 ft.	65845K66	110.89	65845K67	110.89
Two Piece	10 ft.	65845K56	161.79	65845K57	161.79

Accessories

Optional Mounting Bracket	65845K11	$5.70
Repl. Reflector for 65845K7 and K8	65845K41	20.40
Repl. Reflector for 65845K66 and K67	7363K31	15.83

Flat-Body Light Beam Sensing Switches

A small, flat-body design allows these switches to fit into tight spaces. They can be set to either on when object present or on when object absent. Switches have an 18 mm dia. threaded face for mounting and 3 mm dia. mounting holes spaced 24 mm apart. Housing is reinforced plastic. Output rating is 100 mA; temperature range is –4° to +158°F. They're water and oil tight for outdoor use (NEMA 4X and 13). Meet IP67 requirements for washdown. UL recognized, CSA certified, and CE approved.

DC Input Switches—Have NPN and PNP outlets. Response time is 1 millisecond. *Switches with cable* are 2.10″ Lg.×0.48″ Wd.×1.21″ Ht. and have 6½ ft. of 4-wire cable. *Switches with male plug* are 2.83″ Lg.×0.48″ Wd.×1.21″ Ht. and have a 4-pin single keyway.

AC Input Switches—Response time is 8 milliseconds for object-reflecting, 4 milliseconds for reflector, and 2 milliseconds on/1 millisecond off for two-piece switches. *Switches with cable* are 2.60″ Lg.×0.48″ Wd.×1.21″ Ht. and have 6½ ft. of 2-wire cable. *Switches with male plug* are 3.33″ Lg.×0.48″ Wd.×1.21″ Ht. and have a 3-pin double keyway.

Switch Style	Sensing Distance	With Cable		With Male Plug

♠ Requires a reflector (sold separately) for proper operation.

Light Beam Sensing Switches with Relay Output

Object-Reflecting Switch

With a built-in relay output, you can switch AC loads up to 3 amps at 250 VAC. Output can be set to either on when object present or on when object absent. All operate on 24-240 VAC/VDC with a response time of 10 milliseconds. Switches come with a mounting bracket, hardware, and screw-terminal connections. Housing is ABS plastic. Temperature range is –13° to +131°F. Meet IP66 requirements for periodic washdown. CE approved.

Reflector switches include the reflector.

Time delay models have delay-on, delay-off, and single-shot timing functions (see page 911 for definitions). They're adjustable from 0.1 to 5 seconds.

Switch Style	Sensing Distance	Standard		Time Delay	
Object Reflecting	3.3 ft.	9231K11	$97.34	9231K21	$118.66
Reflector	23 ft.	9231K12	99.72	9231K22	121.04
Two Piece	65.6 ft.	9231K13	118.62	9231K23	144.74
Replacement Reflector (1.59″ Lg.×2.36″ Ht.)				9231K31	$10.73

Fiber-Optic Light Beam Sensing Switches

AC/DC Amplifier

Object-Reflecting Cable

Two-Piece Cable

Perfect for reaching tight areas, these fiber-optic switches can detect objects where other switches can't. A complete switch requires an amplifier and fiber-optic cable (each sold separately below). Temperature range is –13° to +131°F. Mounting brackets included.

AC/DC Amplifiers—Can be set to either on when object present or on when object absent. They have an SPDT 3-amp relay output and a red LED beam to provide easy alignment. Operate on 24-240 VAC/12-240 VDC with a response time of 15 milliseconds. Housing is ABS plastic. Size is 2.96″ Lg.×1″ Wd.×2.95″ Ht. Conduit opening is ½″ NPT female. They are water and oil tight for outdoor use (NEMA 4 and 12). Meet IP66 requirements for periodic washdown. UL listed.

Time delay model lets you delay the on signal (on-delay) or off signal (off-delay) from 0.1 to 5 seconds.

Fiber-Optic Cables—Have a polymethylmethacrylate (PMMA) core with a polyethylene jacket and are 6.6 ft. long.

AC/DC Amplifiers

Standard	65935K51	$219.84
Time Delay	65935K52	256.51

Fiber-Optic Cables

For Switch Style	Sensing Distance	Min. Detectable Object Size		
Object Reflecting	2″	0.015 mm dia.	65935K92	$67.50
Two Piece	4.8″	1 mm dia.	65935K91	65.36

For information about electrical switches, see page 855. For information about NEMA and IP ratings, see page 843.

Light Beam Safety Barrier System

Use these "light curtain" safety barriers to shut down potentially hazardous machinery. Breaking the light curtain immediately cuts power to machinery (use only on machinery that can consistently and immediately stop anywhere in its cycle; do not use on a full-revolution clutched press or machine). You can program the system to allow one or more beams to be broken without shutting off your machine—ideal where you need tooling and feed stock to pass through the sensing field.

System includes a transmitter, receiver, 33-ft. transmitter cable, 33-ft. receiver cable, and an electronics enclosure which houses the power supply and relay outputs. It has user-selectable input power (24 VDC or 100-230 VAC) and screw-terminal connections. The system meets or exceeds machine guard requirements set by OSHA and ANSI. Meets IP65 and NEMA 4 and 12 for washdown and oil protection. CSA certified.

The electronics enclosure is metal (mounting hardware included) and the transmitter and receiver have a polyurethane powder-painted aluminum enclosure. The transmitter and receiver are 1½″ Wd.×1 31/32″ Dp.; height is listed below. Enclosure size is 11 3/16″ Ht.×7 7/16″ Wd.×2¾″ Dp. Minimum object detection height (vertical distance between beams) is 0.78″. Maximum distance between transmitter and receiver is 65 feet.

64.6″	70″	7774K38	4,758.73

Single Light Beam Safety Barrier System

Transmitter and Receiver Set

A single beam of light acts as a perimeter guard to shut down potentially hazardous machinery. Breaking the light beam immediately cuts power to machinery (use only on machinery that can consistently and immediately stop anywhere in its cycle; do not use on a full-revolution clutched press or machine). For a complete system, order the transmitter and receiver set, transmitter cable, and receiver cable (cables sold separately below).

Transmitter and receiver set includes one transmitter and one receiver. Both have indicator LEDs to provide status and diagnostic information. Operates on 24 VDC. Maximum distance between transmitter and receiver is 229 feet. Each has six 9/32″ dia. mounting holes (fasteners not included). Meets or exceeds machine guard requirements set by OSHA and ANSI. Also meets IP67 for temporary water submersion.

	Ht.×Wd.×Dp.		
Transmitter and Receiver Set	9.1″×2.2″×1.8″	7231K31	$763.55
Transmitter Cable, 33 ft. Lg.		7231K41	64.35
Receiver Cable, 33 ft. Lg.		7231K42	64.35

Harsh Environment Cycle Timer-Actuated Switch

Now you can set how long you want your timer to run and how long before it starts over—even in harsh environments. Set one knob to select the timer range (15 seconds to 24 hours) and the other to select the percentage of that time your device will remain on. Switch offers a hold setting for manual on or off. Both dials have 32 increments.

Switches one circuit from "off" to "on" or "on" to "off" (SPDT). Green and red LEDs indicate when the circuit is on or off. Rated 20 amps @ 120/240 VAC when switching from "off" to "on," 10 amps @ 120/240 VAC when switching from "on" to "off." Input voltage is 120/240 VAC. NEMA 4X rated for washdown and corrosion protection. Has screw-terminal connections.

The enclosure has four 7/32″ dia. holes for mounting to a box and includes ½″ and ¾″ knockouts. Size is 4 13/16″ Ht.×4 13/16″ Wd.×3⅞″ Dp. UL listed and CSA certified.

2827T1 ..... $144.93

Plug-In Countdown Timer-Actuated Switches

Just plug your electrical device into the switch's three-prong receptacle and set the spring-wound dial to turn off your device after an interval.

Both switch one circuit from "off" to "on" when actuated (SPST-NO). Rated 10 amps @ 125 VAC. Include 6-ft. cord with a standard NEMA 5-15 three-prong plug. Input voltage is 125 VAC. Mechanical life is 6,000 cycles. Size is 3¼″ Ht.×3″ Wd.×2¾″ Dp. UL listed and CSA certified.

Timer Range	Min. On/Off Time		
0 to 30 minutes	1 minute	8386T13	$76.09
0 to 60 minutes	1 minute	8386T14	76.09

Plug-In Countdown Timer-Actuated Switches with Buzzer

Now you'll be able to hear when your time is up—switches have a buzzer alarm with volume control that sounds when the timer stops. They have two rocker switch-operated standard NEMA 5-15 three-prong outlets on the side. If the rocker switch is in the left position, both outlets turn off when the timer stops; if the rocker is in the right position, the top outlet turns off and the bottom outlet turns on when the timer stops, unless noted. All have a 6½″ dia. face that is easy to read at a glance.

Each outlet is rated 5 amps, ⅓ hp @ 120 VAC. Sits on a table top with rubber base pads or mounts on a wall with two ⅜″ holes on the back panel (hardware not included). All have a 6-ft. cord with a standard NEMA 5-15 three-prong plug. Input voltage is 125 VAC. Size is 7½″ Ht.×7½″ Wd.×2½″ Dp. UL listed and CSA certified.

Glow-in-the-dark model has a phosphorescent dial and hands.

Timer Range	Min. On/Off Time		
Standard			
0 to 15 minutes	¼ second	1302T12	$191.67
0 to 60 minutes	1 second	1302T22	183.33
0 to 15 hours	15 second	1302T32	193.75
0 to 60 hours	1 minute	1302T42	191.67
Glow-in-the-Dark			
0 to 60 minutes	1 second	1302T62★	194.20

★ If the rocker is in the left position, both outlets turn on when the timer stops. If the rocker is in the right position, the top outlet stays off, the bottom outlet stays on, and the buzzer sounds when the timer stops.

Countdown Timer-Actuated Switches

Dial Reset

Mount these switches to your panel to control hard-wired devices. They switch one circuit from "off" to "on" or "on" to "off" (SPDT) and require a ⅜″ Dia.×⅛″ Thick. (max.) hole for mounting. Rated 15 amps @ 125/250 VAC. Mechanical life is 1,000,000 cycles. All have ¼″ quick-disconnect connections. Input power connections are two 8″ 20 AWG wire leads. Input voltage is 120 VAC. UL recognized and CSA certified.

Dial-reset switches are set each time by a hand dial. Size is 3 1/16″ Dia.×2 9/16″ Dp. ***Push-button reset*** switches are great if you use the same interval repeatedly. They retain the last setting of the hand dial, so all you have to do is push a button to start the timer over at the same interval. Size is 3 1/16″ Dia.×3 1/16″ Dp.

Timer Range	Dial Increments	*Dial Reset*		*Push-Button Reset*	
0 to 30 minutes	1 minute	7366K61	$132.18	7366K71	$147.58
0 to 60 minutes	5 minutes	7366K62	132.18	7366K72	147.58
0 to 12 hours	30 minutes	7366K63	132.18	7366K73	147.58
0 to 24 hours	2 hours	7366K64	132.18	7366K74	147.58
0 to 60 hours	1 hour	7366K65	132.18	7366K75	147.58

Power-Saving Countdown Timer-Actuated Switch

You won't need any electricity to operate this switch. Simply push and release the button to activate. Switches one circuit from "off" to "on" or "on" to "off" (SPDT) after an adjustable 2-60 second time delay. Rated 10 amps @ 240 VAC. Has solder-lug connections.

Size is 1 7/16″ Ht.×1″ Wd.×1½″ Dp. Mount in a 15/32″ dia. panel cutout with mounting keyway. Depth behind panel is 1 1/16″. Maximum panel thickness is 3/16″. UL recognized and CSA certified.

8008K33 ..... $117.20

For information about electrical switches, see page 855.

Multi-Circuit Cycle Timer-Actuated Switches

Eight Circuits

Program precise sequencing of multiple devices with these switches, also known as interval timers. Select a switch with the number of circuits you need to switch. **To Order:** Please specify the timing cycle you require (the timing cycle will repeat continuously): 10 seconds, 20 seconds, 30 seconds, 60 seconds, 2 minutes, 10 minutes, 30 minutes, 1 hour, or 3 hours.

The "on" and "off" time of each individual switch is adjustable from 2% to 98% of the timing cycle. All have 6″ wire leads for input connections. They are SPDT and rated 15 amps @ 250 VAC. Input voltage is 120 VAC. They have four 0.17″ dia. mounting holes (mounting hardware not included). UL listed and CSA certified.

Digital Outlet Mount with 5-15 Plug

Digital Outdoor Surface/Ground Stake Mount w/Ground Stake

Digital Outlet Mount with Two-Prong Plug

Digital Table Top

NEMA Plug

5-15

Simply plug the switch into an outlet and your appliance into the switch, then set an on/off schedule. All have a manual on/off override. ETL listed, except 7185K25 and 7001K53, which are CSA certified. *Outlet-mount* switches plug directly into wall.

Dial switches repeat the same schedule every day of the week.

Outdoor surface-mount switch has a weather-resistant plastic case and a 22″ cord. Mount at least 4 1/2 feet above ground level (has a 1/4″ mounting hole, hardware not included).

Digital switches offer precise electronic programming and more flexibility.

7001K53 can perform a different schedule for every day of the week and retain your program settings when the power goes out. Use the random on/off time function to make your space seem occupied. It has a battery backup (batteries included). 7001K26 is a 24-hour timer (batteries included). *Table-top* switch has a built-in battery backup and a 6-ft. cord. *Outdoor surface/ground stake mount* has weatherproof cover and a 24″ cord.

Digital Clock-Actuated Switches

Panel Mount

Program a specific, digitally accurate schedule for every day of the week. Switches have seven-day and 24-hour programming functions and a manual override. They also retain your program settings when the power goes out. All switches have a three-year memory backup.

Minimum on/off time is one minute. Switch one circuit from "off" to "on" or "on" to "off" (SPDT). Rated 16 amps @ 277 VAC. UL and C-UL recognized.

Panel mount switches have 1/4″ quick-disconnects. Size is 2.81″ Ht. × 2.81″ Wd. × 1.46″ Dp. Panel cutout size is 2.63″ square. ***Surface/DIN-rail mount*** switches have screw terminals and three 3/16″ × 5/32″ wide elliptical holes for surface mounting (hardware not included). Size is 4.25″ Ht. × 2.93″ Wd. × 2.16″ Dp. DIN rail sold separately.

Input Voltage	Max. On/Off Cycles	Panel Mount		Surface/ DIN-Rail Mount	
24 VAC	20 per Day	71075K9	$94.98	71075K16	$94.98

35 mm DIN Rail (1 m Lg.)				8961K15	$4.96

Two-Circuit Digital Clock-Actuated Switches

24 Hour/7 Day

Control two different devices, each with its own on/off program. Switches have an LCD display, built-in battery backup, and manual override. They switch two circuits independently from "off" to "on" (2 SPST-NO). Minimum on/off time is one minute. Input voltage is 100-240 VAC. Both have screw-terminal connections and are UL recognized and CSA certified.

24-hour/7-day switch can set two 24-hour on/off schedules, each for a different circuit. Program each circuit to apply its schedule to any combination of days during the week. It mounts on a 35 mm DIN rail and includes hardware for a 3.62″ square panel cutout or surface mounting. ***7-day*** switch offers more flexibility, allowing each day of the week its own unique 24-hour schedule. Works just like the Digital Clock-Actuated Switches on this page, but it can control two independent circuits. Mounts in a 2.68″ square panel cutout.

	Amp Rating @ 250 VAC	Max. On/Off Cycles Per Day	Ht.	Wd.	Dp.		
24 Hour/7 Day	10	8	3.78″	3.78″	2.22″	70395K71	$250.00

35 mm DIN Rail (1 m Lg.)						8961K15	4.96

For information about electrical switches, see page 855. For information about NEMA ratings, see page 843.

Dial Clock-Actuated Switches

Program specific time intervals with easy-to-set captive trippers. All switch one circuit from "off" to "on" or "on" to "off" (SPDT). Rated 21 amps @ 250 VAC. Input voltage is 120 VAC. UL recognized and CSA certified.

Panel-mount switches have 1/4″ quick-disconnect connections and mount in a 2.63″ square cutout. Size is 2.83″ Ht.×2.83″ Wd.×1.36″ Dp. ***Surface/35 mm DIN-rail mount*** switches have screw terminal connections and are 4″ Ht.×2.83″ Wd.×2.06″ Dp. Have three 1/8″ Wd. elliptical mounting holes (hardware not included).

Dial Clock-Actuated Switches with Enclosure

Protective enclosures prolong the life of your timer switches. They come with removable or captive trippers for programming specific time intervals. All have 3/16″ dia. mounting holes (hardware not included) and 1/2″ and 3/4″ trade size knockouts, unless noted. All have screw-terminal connections. CSA certified to UL standard 917, unless noted.

Indoor switches have a NEMA 1 enclosure. Size is 7 3/4″ Ht.×5″ Wd.×3″ Dp., unless noted.

Indoor/outdoor switches have a NEMA 3R enclosure. Size is 9 3/8″ Ht.×5 1/2″ Wd.×3 5/8″ Dp., unless noted.

24-hour switches repeat the same on/off schedule daily. ***24-hour switches with day skipper*** are the same as 24-hour models plus they can skip operation for 1 to 3 days (includes three skip screws). ***7-day*** switches allow a different program for each day of the week.

Digital Clock-Actuated Switches with Enclosure

With smaller timing increments and a digital readout, you'll get precision and versatility that comparably priced dial clock-actuated switches can't offer. All have a minimum on/off time of 1 minute and have permanent schedule retention, except 7459K89, which has a built-in battery backup, and 70915K77 and K81, which have a supercapacitor. Enclosures are lockable. They have 1/2″ and 3/4″ trade size knockouts and screw-terminal connections. All have #8 screw holes for mounting except 70915K77 and K81, which have #10 screw holes (hardware not included). UL listed, unless noted. Models that ***spring back (momentary)*** let you activate equipment such as bells and signals for just a few seconds at a time, or they can be set to stay switched (maintained).

24-hour indoor/outdoor switches repeat the same on/off schedule every day. Enclosures measure 8 5/16″ Ht.×5 1/16″ Wd.×3 1/16″ Dp. ***7-day switches with day skipper*** can skip on/off operation on selected days. Enclosures measure 8 5/16″ Ht.×5 1/16″ Wd.×3 1/16″ Dp., except 7459K89, which measures 7 3/4″ Ht.×5″ Wd.×3″ Dp. *7-day switches* let you implement up to seven individual 24-hour programs. 7459K89 can program each circuit independently.

365-day indoor/outdoor switches can program up to 99 holidays for any length of time. They automatically compensate for leap year and daylight savings time. Can also be used for 7-day programming. Enclosures are 8 5/8″ Ht.×5 11/16″ Wd.×3 5/8″ Dp.

About High-Amp Relays (Contactors)

High-amp relays, also known as contactors, switch high currents without direct physical contact from personnel. Instead, they use an electrical signal or control voltage to switch high-amp circuits such as lighting and motor circuits. They are typically rated for applications up to 50 hp. The full load amp rating of a high-amp relay is the maximum amount of current it can switch for a motor. The resistive load amp rating is the maximum amount of current it can switch for other electrical loads, such as heaters.

High-Amp Relays

Four Circuits

Control electric motors even in the most compact operating systems. Also known as IEC contactors, these small relays are built to IEC dimensional standards. Snap them onto a 35 mm DIN rail or mount them to a surface. They have at least four 11/64″ wide mounting slots (hardware not included). Mechanical life is 20 million cycles, longer than that of intermittent-use high-amp relays. All have power terminal protection to prevent dangerous contact with energized parts; connections are accessible from the front for side-by-side mounting. Relays spring back (momentary) when power is removed. Auxiliary contact blocks can be used as a signaling device to energize a light or horn or to control another relay. UL and C-UL listed.

Relays with ***VAC control voltage*** have a power consumption of 6.5 VA, unless noted. **To Order:** Please specify control voltage: 24 VAC, 120 VAC, or 240 VAC. Relays with ***24 VDC control voltage*** have a power consumption of 5.4 watts.

■ Power consumption is 3.0 VA.
★ Resistive load @ 600 VAC is 32 amps. Single phase @ 240 VAC is 3 hp. Three phase @ 480 VAC is 10 hp. Three phase @ 600 VAC is 15 hp.

Intermittent-Use High-Amp Relays

One Circuit

Also called definite-purpose contactors, these relays meet UL508 standards for applications such as air conditioning, refrigeration, and heating. They are compact, giving you more wiring room in small panels. All spring back (momentary) when power is removed. Mechanical life is 500,000 cycles. All have 3-4 mounting slots (hardware not included). Relays have screw-terminal connections and 1/4″ quick-disconnect terminals, except 6564K89, which does not have quick-disconnect terminals. All connections are accessible from the front for side-by-side mounting. Indoor (NEMA 1) enclosures are sold separately below. UL recognized, CSA certified, and CE approved.

To Order: Please specify control voltage: 24 VAC, 120 VAC, or 208/240 VAC.

Also Available: Auxiliary contacts (unless noted). Order 6564K99 and specify the McMaster-Carr part number of your relay and whether you want to switch one circuit "on" or "off" (1 NO or 1 NC).

▲ Single phase hp rating. ♣ Auxiliary contacts not available. ● Has box lug connections.

For information about electrical switches, see page 855. For information about high-amp relays, see page 902.

DIN-Rail Mount Intermittent-Use High-Amp Relays

Mount these relays to a 35 mm DIN rail for easy installation. Also known as definite purpose contactors, they have power terminal protection to prevent dangerous contact with energized parts and at least four 11/64″ wide mounting slots for surface mounting (hardware not included). All have a maximum voltage of 600 VAC and spring back (momentary) when power is removed. Mechanical life is 20 million cycles. UL and C-UL listed. 9114T32-T34 and T42-T44 have an auxiliary contact to switch one circuit from "off" to "on" (SPST-NO).

Relays with ***VAC control voltage*** come in a choice of control voltages. All have a power consumption of 6.5 VA. **To Order:** Please specify control voltage: 24 VAC, 120 VAC, or 230 VAC.

Relays with ***24 VDC control voltage*** have a power consumption of 5.4 watts.

Optional enclosures are plastic and IP65 rated for water projected from a nozzle. CSA certified.

DIN-Rail Mount Long-Life High-Amp Relays

No moving parts means longer, quieter operation. Also known as contactors, these relays use solid-state technology to handle high current. They mount to a 35 mm DIN rail for easy installation and have mounting holes for surface mounting (hardware not included). Rated for continuous operating duty. Relays have a max. voltage of 600 VAC and spring back (momentary) when power is removed. All have screw-terminal connections, an integrated heatsink, and an LED indicator. They do not switch DC loads.

One-circuit relays are UL and C-UL listed and CE approved.

Two- and ***three-circuit*** relays are UL and C-UL recognized and CE approved.

DC Voltage High-Amp Relays

Use on DC-powered equipment such as forklifts and floor scrubbers. Also known as solenoids and contactors, these relays accept a DC control voltage and switch a DC load. Rated for continuous operating duty for cycles that run longer than 30 seconds. All spring back (momentary) when power is removed and have an isolated coil (except 7995K15 and K23) for less arcing. They have 5/16″-24 threaded stud post terminals. Mechanical life is 100,000 cycles, except for 7995K11-K17, which have a mechanical life of 250,000 cycles.

Note: To find a replacement unit, match the amp rating and number of terminals on the old unit.

Long-Life High-Amp Relays

With no moving parts, these relays will last longer than other types. Their unique combination of hybrid solid state and electromechanical switching allows you to rapidly switch up to 35 amps for millions of cycles. Originally designed for food service applications, they can be used in certain applications where mercury relays have been used in the past.

Relays are for use with resistive loads and cannot be used with motor loads. All spring back (momentary) when control voltage is removed. *Note:* Relays cannot be used with an RC snubber on the control signal input or relay output because leakage current through the snubber circuit can turn the relay on, even when the command signal is off.

These relays do not require a heat sink like most solid-state relays. They have six 1/4″ dia. mounting holes for surface mounting (mounting hardware not included) and an LED indicating light that shows if the relay is open or closed. Control terminals have 1/4″ quick-disconnect connections and the load terminals have screw terminal connections. UL and C-UL recognized. CE approved.

About Medium-Amp Relays (Power Relays)

Medium-amp relays, also known as power relays, switch medium currents without direct physical contact from personnel. Like high-amp relays but smaller, they use an electrical signal or control voltage to switch medium-amp circuits such as lighting and motor circuits. They are typically rated for applications up to 3 hp.

Medium-Amp Relays

One Circuit (SPST-NO)

Two Circuits (DPDT)

Four Circuits (4PDT)

Optional Dust Cover for One- and Two-Circuit Relays

Optional Dust Cover for Four-Circuit Relays

Compared to the high-amp relays on this page, these relays, also known as power relays, are smaller and can still handle lighting and motor loads. Relays have screw-terminal connections and can be surface mounted. All spring back (momentary) when power is removed. UL and C-UL listed.

One- and ***two-circuit*** relays have molded plastic bases with two 3/16″ dia. mounting holes (hardware not included). Mechanical life is 1 million cycles. All are 2.2″ Ht.×2.5″ Wd.×2.5″ Dp., except DPDT relays are 2.38″ Ht.×2.5″ Wd.×3.32″ Dp. *Optional dust cover* is aluminum with two 1″ trade size knockout holes. Size is 3″ Ht.×5″ Wd.×4″ Dp.

Four-circuit relays have three 7/32″ dia. mounting holes (hardware included). Maximum voltage is 277 VAC and mechanical life is 10 million cycles. All are 2.7″ Ht.×2.7″ Wd.×3.4″ Dp. *Optional dust cover* is steel with four 3/4″ trade size knockout holes. Size is 3.81″ Ht.×3.81″ Wd.×5.31″ Dp.

For information about electrical switches, see page 855. For information about medium-amp relays, see page 904.

Enclosed Medium-Amp Relays

Increase reliability by protecting contacts from dust and grime. Also known as power relays. All spring back (momentary) when power is removed. They are surface mountable with two 0.18″ dia. mounting holes (hardware not included), unless noted.

Standard relays have a built-in mounting flange and quick-disconnect terminals on top for easy installation, unless noted. All have a contact test button and are rated 1.5 hp @ 120 VAC and 3 hp @ 240/265/277 VAC, except *two-circuit relays* which are rated 1 hp @ 120 VAC and 2 hp @ 240/265/277 VAC. UL recognized, CSA certified, and CE approved. *One-* and *two-circuit relays* have 0.25″ wide terminals. Mechanical life is 5 million cycles. *Four-circuit relays* offer more flexibility for three-phase controlling and are also suitable for single-phase motors. Rated @ 24 VDC for the amp ratings given in the table. They have screw terminal connections and a mechanical life of 1 million cycles.

Easy-mount relay has an indoor (NEMA 1) enclosure with 16″ wire leads in a ½″ trade size conduit connection. Rated 1 hp @ 120 VAC. They are also rated @ 24 VDC for the amp ratings given in the table. It has an LED indicating light and two 0.20″ dia. mounting holes (hardware included). Mechanical life is 10 million cycles. UL and C-UL listed.

Long-Life Medium-Amp Relays

No moving parts means a quieter and longer-lasting relay (also known as solid state relays). A built-in safeguard protects against high inrush current. All have screw-terminal connections and spring back (momentary) when power is removed. Mounting hardware not included.

35 mm DIN Rail (1 m Lg.) **8961K15** $4.96

Standard Relay

Touchsafe Relay

One-Circuit Relay with Built-In Heat Sink

Two-Circuit Relay with Built-In Heat Sink

Relays and Optional Heat Sinks

Standard relays have two 0.19″ dia. mounting holes. Size is 1″ Ht.×1.75″ Wd.×2.25″ Dp. UL recognized and CSA certified.

Touchsafe relays have a cover to prevent contact with live terminals. They are 1.13″ Ht.×1.76″ Wd.×2.29″ Dp. and have two 0.21″ dia. mounting holes, except 75- and 90-amp relays, which are 1.10″ Ht.×1.69″ Wd.×2.28″ Dp. and have two 0.18″ dia. mounting holes. UL recognized, CSA certified, and CE approved.

Heat sinks disperse heat to increase the amp rating of standard and touchsafe relays. DIN-rail mountable (DIN-rail sold separately). Apply a thin layer of ***heat sink silicone compound*** (sold separately) between the heat sink and the relay before mounting.

For information about electrical switches, see page 855.

About Relays

Relays switch circuits without direct physical contact from personnel. Typically used in control applications, they allow remote switching of electrical loads. They use an electrical signal or control voltage to switch circuits.

Don't see the relay you need? Just tell us what you're looking for and we'll get it for you.

Circular-Pin Relays

8-Pin Relay

11-Pin Relay

Socket for 8-Pin Relays

Socket for 11-Pin Relays

Easy to install and maintain, these relays plug right into a socket (sold separately). Also known as ice cube relays, they have clear plastic dust covers, unless noted. All spring back (momentary) when power is removed.

Standard Relays

Relays with LED indicate when they are energized. UL recognized and CSA certified. ***One-circuit relays*** are 2.28″ Ht. × 1.38″ Wd. × 1.38″ Dp. Mechanical life is 100,000 cycles. ***Two-circuit*** and ***three-circuit relays*** have a lockable test button. They are 2.07″ Ht. × 1.36″ Wd. × 1.36″ Dp. Mechanical life is 5 million cycles.

For information about electrical switches, see page 855. For information about relays, see page 906.

Don't see the relay you need? Just tell us what you're looking for and we'll get it for you.

Compact Spade-Terminal Relays

8-Terminal Relay (15 and 16 Amp)

11-Terminal Relay

14-Terminal Relay (15 Amp)

Socket 69585K1

Socket 69585K2

Socket 69585K3

Socket 69585K4

Get connection versatility in a small package. Terminals can plug into a socket (sold separately) for quick installation, connect to 0.187″ quick-disconnect terminals (unless noted), or be soldered. A push button and indicator let you test the circuit without energizing the relay. An LED tells you when they are energized; a write-on label simplifies identification. All spring back (momentary) when power is removed. Mechanical life is 10 million cycles. Maximum voltage is 277 VAC/220 VDC. Relays and sockets are UL recognized, CSA certified, and CE approved. Relays are UL listed when used with the suggested sockets.

Relays are 1.54″ Ht.×0.83″ Wd.×1.10″ Dp., except 11-terminal relays are 1.54″ Ht.×1.21″ Wd.×1.10″ Dp. and 15-amp 14-terminal relays are 1.54″ Ht.×1.60″ Wd.×1.10″ Dp.

Sockets have screw-terminal connections and are DIN-rail or surface mountable (have two 0.38″ dia. mounting holes, hardware not included).

35 mm DIN Rail *(1 m Lg.)* 8961K15 $4.96

★ Connects to a 0.110″ quick-disconnect terminal.

Slim Spade-Terminal Relays

Standard 5-Terminal Relay

Standard 8-Terminal Relay

Standard Socket

Save valuable space on your DIN rail. These narrow relays are for low-current switching applications such as small fractional motors, safety circuits, and pilot lights. Just plug into a socket (sold separately below) for quick installation. All spring back (momentary) when power is removed. UL recognized and CSA certified.

Standard relays have a mechanical life of 10 million cycles for VAC operation, 20 million for VDC. *One-circuit relays* are rated 0.33 hp @ 125 VAC. *Two-circuit relays* are rated 0.16 hp @ 120 VAC. ***Long-life relay*** is silent and long-lasting because it's solid state (has no moving parts). Use for high-speed switching at low current levels.

Sockets are DIN-rail mountable. *Standard* sockets are surface mountable (have one 0.14″ dia. mounting hole, hardware not included). They have screw-terminal connections. Size is 2.4″ Ht.×0.63″ Wd.×3.57″ Dp. *Sure-connect* sockets have screwless spring-clamp terminals to withstand temperature changes and vibration. Size is 2.5″ Ht.×1.06″ Wd.×3.56″ Dp. **To Order:** Please specify standard or sure-connect.

Flange-Mount Spade-Terminal Relays

Standard 8-Terminal Relay

Standard 11-Terminal Relay

Standard 14-Terminal Relay

Slim Relay

Mount these flanged relays to a flat surface. They have two 0.14″ wide mounting slots. All spring back (momentary) when power is removed. UL recognized and CSA certified.

Standard relays can plug into a socket (sold separately). Rated 10 amps @ 110 VAC, except 70315K31, which is rated 15 amps @ 110 VAC. *One-circuit* and *two-circuit relays* are rated 0.50 hp @ 120 VAC. *Three-circuit* and *four-circuit relays* are rated 0.50 hp @ 240 VAC. Mechanical life is 50 million cycles. ***Slim relays*** save space and have 0.187″ quick-disconnect terminals. Rated 10 amps @ 250 VAC/30 VDC and 0.33 hp @ 125 VAC. Mechanical life is 10 million cycles for VAC operation and 20 million cycles for VDC operation.

To Order: Please specify control voltage (power consumption): 24 VAC (46 mA) or 120 VAC (9 mA), unless noted.

Sockets have screw-terminal connections and are DIN-rail or surface mountable (have two mounting holes, hardware not included). See page 910 for more socket information.

Long-Life Spade-Terminal Relays

Relay

Heat Sink

Solid-state relays have no moving parts, so they last longer. Use for high-speed switching at low current levels. Both spring back (momentary) when power is removed.

Relays have two 0.110″ quick-disconnect terminals on the input side; two 0.250″ quick-disconnect terminals on the output side. Both switch one circuit "on" (SPST-NO). They have two 0.138″ dia. mounting holes (hardware not included). UL recognized and CSA certified.

To Order: Please specify control voltage: 5 VDC, 12 VDC, or 24 VDC.

Heat sink is for high-current applications. DIN-rail or surface mountable (has two 0.17″ dia. mounting holes).

Amp Rating @ 100-240 VAC: With Heat Sink	Without Heat Sink

35 mm DIN Rail (1 m Lg.)		8961K15	4.96

Ultra-Thin Relays

Relay and Socket on DIN Rail

Ideal for PLC control systems, these plug-in relays, also known as output modules, take up very little space. They switch one circuit "on" or "off" (SPDT) and are rated 6 amps @ 250 VAC. Max. voltage is 400 VAC. All spring back (momentary) when power is removed. All have an LED indicator and screw-terminal connections. They are 35 mm DIN-rail mountable. Mechanical life is 10 million cycles. UL and C-UL recognized and CE approved.

Control Voltage, VAC/VDC	Power Consumption	Relay and Socket Combinations		Replacement Relay	
24	12 mA	8262T11	$15.23	8262T21	$5.42
125	5 mA	8262T12	18.35	8262T22	8.73
240	4 mA	8262T13	18.35	8262T22	8.73
35 mm DIN Rail (1 m Lg.)				8961K15	$4.96

Ultra-Thin Long-Life Relays

Relay on DIN Rail

Also known as output modules, these compact relays are solid state, so they have no moving parts. They have a replaceable 3-amp fuse to protect your equipment. Both switch one circuit "on" (SPST-NO) and have four screw terminals. They spring back (momentary) when power is removed. Both are DIN-rail mountable and have an LED indicator. UL recognized, CSA certified, and CE approved.

Control Voltage	Amp Rating		
4-28 VDC	3 @ 12-280 VAC	8299K11	$28.90
4-28 VDC	3 @ 5- 60 VDC	8299K12	27.90
Replacement 3-Amp Fuse		8299K21	.89
35 mm DIN Rail (1 m Lg.)		8961K15	4.96

Ultra-Thin Signal Conditioning Long-Life Relays

Relay on DIN Rail

Prevent power surges from traveling to PLCs and microprocessors. Also called input modules, these solid-state relays convert electrical signals into logic-level signals. They have a narrow, compact design and switch one circuit "on." They function by negative logic (there is no output voltage if a control voltage is present). An output voltage is generated when the control voltage is removed. Relays have an LED indicator and four screw-terminal connections. They fit on a standard 35 mm DIN rail. UL recognized, CSA certified, and CE approved.

Control Voltage	Output Voltage	Amp Rating @ 280 VAC/28 VDC		
90-280 VAC	4-28 VDC	100 mA	7356K21	$27.39
4- 28 VDC	4-28 VDC	100 mA	7356K22	26.45
35 mm DIN Rail (1 m Lg.)			8961K15	4.96

Relays That Stay Switched

DIN-Rail Mount On DIN Rail

Surface Mount

If your relay has to stay switched for a long time, you can save energy with these relays because they don't require a constant control voltage to stay switched. Also known as latching relays, a momentary signal to one coil transfers and sets the latch; a momentary signal to the other coil releases it. For intermittent use only.

DIN-rail mount relays are enclosed and mount on a 35 mm DIN rail for quick installation. They also have 0.16″ wide mounting slots for surface mounting. All have 0.187″ quick-disconnect terminals. Rated 0.33 hp @ 120 VAC and 0.50 hp @ 208-600 VAC. Mechanical life is 10 million cycles. UL recognized. **To Order:** Please specify control voltage: VAC or VDC.

Surface-mount relays are rated 0.25 hp @ 120 VAC and 0.33 hp @ 240 VAC. Mechanical life is 50,000 cycles. Relays have three 0.16″ dia. holes for mounting (hardware not included). UL recognized and CSA certified. **To Order:** Please specify control voltage, unless noted: VAC or VDC; and connection type: solder lugs or 0.187″ quick-disconnect terminals.

●Not available with a VDC control voltage.

DIN-Rail Mount Screw-Terminal Relays

Built to IEC dimensional standards, these relays have touchsafe screw-terminal connections and are DIN-rail or surface mountable (have four 0.17″ dia. mounting holes, hardware not included). 7230K87 and K88 have interlocked opposing contacts that will not simultaneously close, making them ideal for safety applications. All spring back (momentary) when power is removed. Mechanical life is 20 million cycles. UL and C-UL listed. **To Order:** Please specify control voltage (power consumption): 24 VAC (125 mA), 120 VAC (25 mA), or 240 VAC (12.5 mA).

Use the ***auxiliary contact block*** as a signaling device to energize a light or horn or to control another relay. It switches two circuits, one "on" and one "off" (DPST-NO/NC).

No. of Circuits Switched	Before Switching, Circuit Is	Industry Designation	Amp Rating @ 600 VAC

For information about electrical switches, see page 855. For information about relays, see page 906.

Don't see the relay you need? Just tell us what you're looking for and we'll get it for you.

Hazardous-Location Relays

These relays are hermetically sealed to meet UL Class 1, Division 2 for use in hazardous locations. They have a maximum voltage of 240 VAC and plug into sockets (sold separately below). All relays spring back (momentary) when power is removed. They are UL and C-UL recognized and CSA certified.

Relays that ***switch two*** and ***three circuits*** are 2.05″ Ht. × 1.34″ Wd. × 1.52″ Dp. Mechanical life is 5 million cycles.

Relays that ***switch four circuits*** are 1.28″ Ht. × 0.91″ Wd. × 1.15″ Dp. Mechanical life is 10 million cycles.

Sockets are DIN-rail and surface mountable. See page 910 for more socket information.

High DC Inrush Current Relays

Also called automotive relays, these relays can handle a high-inrush current of up to 120 amps, unless noted. Mechanical life is rated at 10 million cycles, unless noted. Relays without a mounting tab hole diameter listed in the table do not have a mounting tab.

Four-pin relays have two 0.250″ wide and two 0.375″ wide quick-disconnect terminals; ***five-pin*** relays have 0.25″ wide quick-disconnect terminals. Sockets are sold separately below. ***Standard relays*** are for dry environments. Use ***weatherproof relays*** in wet or damp locations.

Printed circuit board sockets have 0.34″ long pins except 8228K11, which has 0.23″ long pins. 8228K41 is 0.50″ Ht. × 0.95″ Wd. × 1.04″ Dp. and K11 is 0.57″ Ht. × 0.95″ Wd. × 1.04″ Dp.

Wiring harness sockets include terminals to attach wire, except 8228K44, which has 12″ wire leads. 8228K43 is 1.25″ Ht. × 0.97″ Wd. × 1.15″ Dp., K42 is 1.0″ Ht. × 0.95″ Wd. × 1.04″ Dp., and K44 is 1.25″ Ht. × 1.37″ Wd. × 1.63″ Dp.

★ Can handle a high-inrush current of 150 amps. ▲ Can handle a high-inrush current of 150 amps and has a mechanical life of 1 million cycles.

Harsh Environment Relays

Water washdowns, dirt, and corrosion won't affect these NEMA 4X rated enclosed relays. These relays don't even require a socket; instead, they have 16″ long wire leads through a ½″ trade size conduit connection. All have an LED indicating light and two 0.15″ dia. mounting holes for surface mounting (hardware included). Size is 1.7″ Ht. × 2.8″ Wd. × 1.5″ Dp. They spring back (momentary) when power is removed. Mechanical life is 10 million cycles. UL and C-UL listed.

4766T15 has a dry contact closure. It requires a 120-277 VAC circuit to operate and actuates when it receives a low-current signal from your thermostat or other device.

For information about electrical switches, see page 855. For information about relays, see page 906.

Don't see the relay you need? Just tell us what you're looking for and we'll get it for you.

Relay Sockets

Relays plug into these sockets for fast connection and replacement. They mount to a 35 mm DIN rail (sold separately) and have two mounting holes for surface mounting. Mounting hardware is not included. All have screw-terminal connections. UL recognized, CSA certified, and CE approved, except 7122K23, which is not CE approved.

Fingersafe models have recessed screw-terminal connections to prevent contact with live circuits.

Hold-Down Clips— Ideal for applications subject to vibration.

Mounted on DIN Rail

Sequenced Relays That Stay Switched

Two Circuit Relay On DIN Rail

Controlling motors, pumps, and lighting often requires this type of relay, also known as a latching or step relay. They switch circuits differently each time they receive a control voltage signal and stay switched after the control voltage is removed. All have a test button, a mechanical indicator, and touchsafe screw terminals. DIN-rail mountable. Rated 16 amps @ 120 VAC/24 VDC and 0.50 hp @ 120 VAC. Power consumption is 6.5 VA for VAC and 5 watts for VDC. Max. voltage is 277 VAC and mechanical life is 300,000 cycles. UL recognized and CE approved.

To Order: Please specify control voltage: 24 VAC, 120 VAC, 240 VAC, 12 VDC, or 24 VDC.

When Relay Receives: 1st Signal	2nd Signal	3rd Signal	4th Signal	Circuit Is...		
Switch One Circuit

PC Board-Mount Relays

Miniature 6-Pin Relay

Socket

Solder these relays to a printed circuit board to switch small fractional motors, safety circuits, and pilot lights. All spring back (momentary) when power is removed. UL recognized; CSA certified.

Standard relays have a max. voltage of 380 VAC/125 VDC and a mechanical life of 10 million cycles for VAC, 20 million cycles for VDC. All have 0.16″ long pins. Size is 1.00″ Ht. × 1.14″ Wd. × 0.51″ Dp.

Miniature relays are just 0.49″ Ht. × 0.79″ Wd. × 0.43″ Dp. Mechanical life is 50 million cycles. They can also plug into sockets (sold separately below). Relays and sockets have 0.14″ long pins.

Socket 8418K41 is 0.40″ Ht. × 0.91″ Wd. × 0.39″ Dp.; K42 is 0.43″ Ht. × 0.94″ Wd. × 0.39″ Dp.

For information about electrical switches, see page 855.

About Relays with Timing Function

Timing relays, or time-delay relays, have contacts that open or close based on a time delay once power (control voltage) is applied or removed. For simplicity, examples are based on a time delay of one minute.

Reset Time— The amount of time it takes for a relay to return to its initial state once power is disconnected.

Initiation Time— The minimum amount of time between switch actuation and relay output for switch-on initiated interval (single-shot) and switch-off initiated interval (delay-on-break) relays.

On-Delay— Also known as delay-on-make, you set how long it takes for a relay to turn "on" once power is applied.

Example: When you plug in a lamp the light automatically turns on in one minute.

Switch-On Initiated Interval— Also known as single-shot, you set how long it takes for a relay to turn "off" once the switch is turned on.

Example: First plug in a lamp. Then switch the light on. The light automatically will turn off in one minute, regardless of what you do to the switch.

Off-Delay— Also known as power-off delay, you set how long it takes for a relay to turn "off" once power is disconnected.

Example: When you unplug a lamp, the light automatically stays on for one minute.

Switch-Off Initiated Interval— Also known as delay-on-break, you set how long it takes for a relay to turn "off" once the switch is turned off.

Example: First plug in a lamp. Then switch the light on. When you switch the light off, the light will automatically turn off in one minute.

Interval— You set how long a relay stays "on" once power is applied.

Example: When you plug in a lamp the light automatically turns on, stays on for one minute, then automatically turns off.

Repeat Cycle— You set the length of the "on" cycle and the length of the "off" cycle. This cycle is repeated until power is disconnected.

Example: When you plug in a lamp the light automatically turns on for one minute, then automatically turns off for one minute. This continues until you unplug the lamp.

Relays with Single-Function Timing

Adjust the time delay of these relays within the given timing range. All have a single knob for adjustment except *repeat-cycle relays*, which have two knobs for separate adjustment of "on" and "off" times.

They switch two circuits "on" or "off" (DPDT) except *switch-on initiated interval (single-shot) relays*, which switch one circuit "on" or "off" (SPDT). All are rated 10 amps @ 240 VAC and 100 mA @ 12 VDC. Relays are 8-pin circular pin style, unless noted. Mechanical life is 10 million cycles. Size is 2.9″ Ht. × 1.7″ Wd. × 2.4″ Dp. UL recognized and CSA certified.

Switch-on initiated interval (single-shot) and ***switch-off initiated interval (delay-on-break) relays*** have an initiation time of 20 mS.

Sockets (sold separately) are DIN-rail and surface-mountable (have two 0.165″ dia. mounting holes). See page 910 for more socket information.

HVAC Motor Starting Relays

Also known as potential relays, these relays control the start capacitor in single phase air conditioning and refrigeration motor circuits. Relays have six quick-disconnect adapters and they run on 50/60 Hz. All have a removable bracket and 5/32″ dia. mounting holes for surface mounting. Mechanical life is 200,000 cycles. Size is 2 1/32″ Ht. × 1 13/16″ Wd. × 1 13/16″ Dp. UL recognized and CSA certified.

Note: Hold voltage is the rated coil voltage of the motor at peak efficiency. Pickup voltage is the initial voltage that actuates the relay and starts the motor. Dropout voltage is the voltage at which the motor exceeds the optimum speed and the relay disengages.

Hold Voltage	Pickup Voltage	Dropout Voltage		
170 VAC	139-153 VAC	30- 55 VAC	**6773T21**	$17.22
253 VAC	285-305 VAC	35- 77 VAC	**6773T22**	17.22
332 VAC	168-182 VAC	55- 90 VAC	**6773T23**	17.22
332 VAC	180-193 VAC	40-105 VAC	**6773T24**	17.22
395 VAC	215-225 VAC	60-120 VAC	**6773T25**	17.22
395 VAC	260-275 VAC	60-120 VAC	**6773T26**	17.22

For information about electrical switches, see page 855. For information about timing functions, see page 911.

Timing Adapters and Sockets for Relays

6845K16 6845K21 6845K22

6845K35 6845K36 and K37

Turn ordinary relays into timing relays with these timing adapters. Just mount the adapter and the appropriate electromechanical relay to a socket (see table) and you've got all the functions of a more expensive timing relay. Reset time is 50 mS. UL and C-UL recognized and CE approved. Adapters must be used with sockets sold separately below.

Dual-function adapter has on-delay (delay-on-make) and interval functions. ***Multifunction adapter*** has on-delay (delay-on-make), interval, repeat cycle, switch-off initiated interval (delay-on-break), and switch-on initiated interval (single shot) functions. ***Sockets*** mount on a 35 mm DIN rail or can be surface mounted. They have two 0.13″ dia. mounting holes except 6845K21, which has one 0.13″ dia. mounting hole. All have screw-terminal connections. Rated 10 amps @ 250 VAC.

Control Voltage	Power Consumption	Timing Range		
Dual-Function Adapter				
12-24 VAC/VDC	0.15 W	50 mS-100 hrs.	6845K16	$26.23
Multifunction Adapter				
12-240 VAC/VDC	1.2 W	50 mS-100 hrs.	6845K35	48.60
Sockets for 6845K16 (For Use With):				
8-Pin PC Board Mount Relays			6845K21	5.18
14-Pin 4-Circuit Mini Spade Terminal Relays			6845K22	4.96
Sockets for 6845K35 (For Use With):				
8-Pin 2-Circuit Circular-Pin Relays			6845K36	5.43
11-Pin Circular-Pin Relays			6845K37	6.28
35 mm DIN Rail *(1 m Lg.)*			8961K15	4.96

Relays with Wide Time Range Timing Function

On-Delay (Delay-On-Make) Relay

Socket

More precise than knobs, DIP switches make it easy to adjust wide timing ranges for more versatility. All have eight circular pins. Rated 10 amps @ 240 VAC. 7096K23, K24, K22, and K21 are also rated 10 amps @ 28 VDC and 0.33 hp @ 240 VAC. Mechanical life is 10 million cycles. Size is 3.2″ Ht.×1.8″ Wd.×2.4″ Dp., unless noted. UL recognized and CSA certified, unless noted.

On-delay (delay-on-make) relays switch two circuits "on" or "off" (DPDT). **To Order:** Please specify control voltage (power consumption): 24 VAC (83 mA), 120 VAC (17 mA), 240 VAC (8 mA), 12 VDC (167 mA), or 24 VDC (83 mA).

Interval and ***repeat cycle relays*** switch two circuits "on" or "off" (DPDT). ***Switch-on initiated interval (single-shot)*** and ***switch-off initiated interval (delay-on-break) relays*** switch one circuit "on" or "off" (SPDT). They have an initiation time of 60 mS. **To Order:** For interval, repeat-cycle, switch-on initiated interval (single-shot), and switch-off initiated interval (delay-on-break) relays, specify control voltage (power consumption): 24 VAC (135 mA), 120 VAC (27 mA), 240 VAC (14 mA), 12 VDC (271 mA), or 24 VDC (135 mA).

Sockets (sold separately) are DIN-rail or surface-mountable (have two 0.165″ dia. mounting holes). See page 910 for more information.

	Timing Range	Reset Time		
Relays				
On-Delay	0.05 sec.-999 min.	150 mS	7096K1★	$66.55
Interval	1 sec.-1,023 sec.	50 mS	7096K23	69.38
Repeat Cycle	1 sec.-1,023 sec.	150 mS	7096K24	79.82
Switch-On Initiated Interval	1 sec.-1,023 sec.	50 mS	7096K22	60.96
Switch-Off Initiated Interval	1 sec.-1,023 sec.	50 mS	7096K21	70.60
Socket for All Above Relays			7122K19	4.07
35 mm DIN Rail *(1 m Lg.)*			8961K15	4.96

★ Has a three-digit push-button switch. Size is 3.7″ Ht.×1.75″ Wd.×2.4″ Dp. UL and C-UL recognized; not CSA certified.

Long-Life Relays with Timing Function

1- and 20-Amp On-Delay (Delay-On-Make) Relay

8-Amp On-Delay (Delay-On-Make) Relay

It's time to upgrade to a reliable relay. These solid-state relays have a built-in variable switch (potentiometer) to adjust time within the timing range, unless noted. All relays switch one circuit "on" (SPST-NO) except 77055K62 and K63, which switch one circuit "on" or "off" (SPDT). Mechanical life is 100 million cycles except 8-amp on-delay (delay-on-make) relays, which have a mechanical life of 10 million cycles. All have ¼″ quick-disconnect terminals and can be surface mounted (hardware not included).

1-amp and ***8-amp relays*** have one 0.17″ dia. mounting hole. Size is 2″ Ht.×2″ Wd.×0.88″ Dp. UL and C-UL recognized. **To Order:** Please specify timing range: 0.05-1 sec., 0.25-5 sec., 0.5-10 sec., 3-60 sec., 15-300 sec., or 30 sec.-10 min., unless noted.

20-amp relays have one 0.25″ dia. mounting hole. Size is 2″ Ht.×2″ Wd.×1.08″ Dp. UL recognized and CSA certified. **To Order:** Please specify timing range: 0.1-10 sec., 1-100 sec., 10-1,000 sec., 0.1-10 min., 1-100 min., or 10-1,000 min.

Control Voltage	Power Consumption	Amp Rating @ 120 VAC	Reset Time, mS

▲ **To Order:** Please specify timing range: 0.25-5 sec., 0.5-10 sec., or 3-60 sec.
♠ Requires two variable switches (potentiometers), sold separately.

DIN-Rail Mount Long-Life Relays with Timing Function

On-Delay (Delay-On-Make) Relay on DIN Rail

Searching for something that mounts quickly, lasts long, and stays silent? Choose one of these relays—both are DIN-rail mountable and have solid-state outputs. Use the adjustment screw to select the timing range: 0.1-1 sec., 1-10 sec., 6-60 sec., 1-10 min., 6-60 min., 1-10 hr., or 10-100 hr. The knob allows you to adjust within the selected timing range.

Relays switch one circuit (SPST). Rated 0.5 amps @ 250 VAC. Reset time is 350 mS. Power consumption is 7 mA and mechanical life is 100 million cycles. Both have screw-terminal connections and a green LED indicator light. Size is 3.19″ Ht.×0.69″ Wd.×2.72″ Dp. UL and C-UL listed, CSA certified, and CE approved.

Panel-Mount Relays with Timing Function

Panel mount these relays for a finished look. All have an indicating light. Reset time is 100 mS, unless noted.

Compact and ***standard relays*** switch two circuits "on" or "off" (DPDT) and are rated 5 amps @ 250 VAC, except 69695K51, which is rated 5 amps @ 240 VAC. They plug into a socket and fit into a square panel cutout when used with the optional mounting brackets (socket and brackets sold separately). Mechanical life is 10 million cycles, unless noted. CE approved. *Compact relays* fit into a 1.30″×1.30″ cutout and are 1.4″ Ht.×1.4″ Wd.×3.2″ Dp. *Standard relays* fit into a 1.77″×1.77″ (1/16 DIN) cutout and are 1.9″ Ht.×1.9″ Wd.×3.7″ Dp., unless noted. *Multifunction relay* has on-delay (delay-on-make), repeat cycle, interval, and switch-on initiated interval (single-shot) functions. ***Large display relays*** have on-delay (delay-on-make) and interval functions, as well as everything you need to mount in a 3.2″ dia. panel cutout. All have a movable pointer that shows status at a glance. They switch one circuit "on" or "off" (SPDT) and are rated 10 amps @ 120 VAC. Mechanical life is 5 million cycles.

Socket is DIN-rail or surface mountable (has two 0.165″ dia. mounting holes, hardware not included). See page 910 for more socket information.

Compact Relay

Standard Relay

Large Display Relay

Relays with Multiple Timing Functions

Handy relays switch between on-delay (delay-on-make), interval, repeat cycle, switch-off initiated interval (delay-on-break), and switch-on initiated interval (single-shot) functions. They have two rotary switches: one selects the timing range, the other selects the operating mode. All are 11-pin circular-pin style and plug into a socket (sold separately). They switch two circuits "on" or "off" (DPDT). Rated 10 amps @ 240 VAC. Reset time is 150 mS. Mechanical life is 10 million cycles. UL and C-UL recognized.

Plug-in relay has five timing ranges.

To Order: Please specify control voltage (power consumption): 24 VAC (83 mA), 120 VAC (17 mA), 240 VAC (8 mA), 12 VDC (166 mA), or 24 VDC (83 mA).

Plug-in/panel-mount relay has six timing ranges. Control voltage is 24-240 VAC. Power consumption is 51 mA. Fits a standard 1.77″×1.77″ (1/16 DIN) panel cutout when used with the panel-mount bracket (sold separately, hardware included).

Socket (sold separately) is DIN-rail or surface mountable (has two 0.165″ dia. mounting holes, hardware not included). See page 910 for more socket information.

Plug-In Relay

Plug-In/Panel-Mount Relay

	Total Timing Range		
Plug-In Relay	0.05 sec.-999 min.	6964K2	$76.62
Plug-In/Panel-Mount Relay	0.05 sec.-999 hrs.	6964K3	129.66
Panel-Mount Bracket for Plug-In/Panel-Mount Relay		6963K22	9.26
Socket for Both Relays		7122K21	6.89
35 mm DIN Rail (1 m Lg.)		8961K15	4.96

Long-Life Relays with Multiple Timing Functions

Versatile and long-lasting, these relays have solid-state outputs. Rated 3 amps @ 250 VAC. Mechanical life is 10 million cycles. UL recognized and CSA certified.

Miniature plug-in relay is small enough for tight spaces. You'll get an adjustable timing range between 0.1 seconds and 10 minutes and three operating modes: on-delay (delay-on-make), interval, and repeat cycle. Switches four circuits "on" or "off" (4PDT) and has 14 1/4″ quick-disconnect terminals. Reset time is 100 mS. **To Order:** Please specify control voltage (power consumption): 100-120 VAC (117 mA), 200-230 VAC (7 mA), or 24 VDC (38 mA).

Plug-in/panel-mount relay lets you switch between seven timing ranges and eight timing functions: on-delay (delay-on-make), interval, repeat cycle, two types of switch-off initiated interval (delay-on-break), switch-on initiated interval (single-shot), and two types of signal on/off delay. An LCD bar graph displays the time remaining.

Relay is 11-pin circular-pin style. Switches one circuit "on" or "off" (SPDT). Control voltage is 24-240 VAC/12-240 VDC. Power consumption is 167 mA and reset time is 500 mS. Fits a standard 1.77″×1.77″ (1/16 DIN) panel cutout when used with the mounting bracket (sold separately, hardware included).

Miniature Plug-In Relay

Plug-In/Panel-Mount Relay

Sockets (sold separately below) are DIN-rail and surface mountable (have two 0.165″ mounting holes, hardware not included). See page 910 for more socket information.

Miniature Plug-In Relay	7339K7	$60.00
Plug-In/Panel-Mount Relay	6963K14	144.13
Socket for Miniature Plug-In Relay	7122K25	9.14
Socket for Plug-In/Panel-Mount Relay	7122K21	6.89
Panel-Mount Bracket for Plug-In/Panel-Mount Relay	6963K22	9.26
35 mm DIN Rail (1 m Lg.)	8961K15	4.96

DIN-Rail Mount Long-Life Relays with Multiple Timing Functions

A slim profile and mounting adapters let you DIN-rail or surface mount in crowded enclosures (hardware included). Relays switch between on-delay (delay-on-make), interval, repeat cycle, switch-off initiated interval (delay-on-break), and switch-on initiated interval (single-shot) functions.

All have a solid-state output rated 0.7 amps @ 240 VAC. They switch one circuit (SPST). Reset time is 300 mS. Power consumption is 5 mA and mechanical life is 100 million cycles. Size is 3″ Ht.×0.7″ Wd.×2.4″ Dp. UL recognized, CSA certified, and CE approved.

When in switch-on initiated interval (single-shot) and switch-off initiated interval (delay-on-break) operating modes, relays have an initiation time of 32 mS.

Knob-adjustable relays' timing range is 0.1 second to 100 minutes.

DIP-switch adjustable relays are more precise than knobs, with six switches to adjust the time delay. Plus, it's easier to set multiple relays to the same timing range. Timing range is 0.1 second to 63 minutes.

To Order: Please specify control voltage: 24-240 VAC or 9-110 VDC.

Knob Adjustable Relay with Quick-Disconnect

DIP Switch Adjustable Relay with Terminal Block

Adjustment Type	Terminal Connection Type		
Knob	1/4″ Quick-Disconnect	7399K11	$54.55
Knob	Terminal Block	7399K12	64.14
DIP Switch	1/4″ Quick-Disconnect	7399K13	54.55
DIP Switch	Terminal Block	7399K14	64.14
35 mm DIN Rail (1 m Lg.)		8961K15	4.96

For information about electrical switches, see page 855. For information about timing functions, see page 911.

Medium-Amp Relays with Timing Function

On-Delay Relay *Switch-Off Initiated Interval Relay*

Ready for circuits with compressors, blowers, and heaters, these relays are rated 30 amps @ 120 VAC, 20 amps @ 28 VDC, and 1 hp @ 120 VAC. Also known as power relays, they can be mounted to a 35 mm DIN rail with an adapter (sold separately below). They have a knob that allows you to adjust within the timing range. All switch one circuit "on" or "off" (SPDT). Reset time is 150 mS and mechanical life is one million cycles. They have 1/4″ quick-disconnect terminals and one 0.19″ dia. hole for surface mounting (hardware not included). Size is 3.02″ Ht.×2.02″ Wd.×1.00″ Dp. UL recognized and CSA certified. For information about medium-amp relays, see page 904.

To Order: Please specify control voltage (power consumption): 24 VAC (167 mA), 120 VAC (33 mA), or 24 VDC (83 mA); and timing range: 0.1-10 sec., 1-100 sec., 10-1,000 sec., 6 sec.-10 min., or 1-100 min., unless noted.

Relays

★24 VAC (167 mA) control voltage is not available in 1-100 min. timing range.

Mini Programmable Logic Controllers

A mix between a PLC and a relay with timing function, these "smart" relays have built-in logic, timer, counter, control, and real-time clock functions. They even feature eight individually programmable time switches, each with four of their own on/off functions, so you can program up to seven days ahead. Simple to operate, they require no additional hardware or programming software. Plus, they are DIN-rail mountable and their small size frees up valuable panel space.

Select from 16 timing ranges between 0.01 sec.-100 hours and six operating modes: two types of on-delay (delay-on-make), two types of switch-off initiated interval (delay-on-break), switch-on initiated interval (single shot), and repeat cycle. Units feature an LCD screen, soft-touch buttons, and 64-hour memory backup.

Both have solid-state output rated 10 amps @ 240 VAC and 8 amps @ 24 VDC. Mechanical life is 10 million cycles. They have fingersafe screw-terminal connections. UL listed, CSA certified, and CE approved.

24-VDC relay can receive and evaluate analog signals from temperature and pressure sensors on two of the eight inputs.

Control Voltage	Power Consumption	No. of Signal Inputs	No. of Relay Outputs		
100/240 VAC	40/20 mA	8	4	**7244K8**	$226.35
24 VDC	80 mA	8	4	**7244K9**	226.35
35 mm DIN Rail (1 m Lg.)				**8961K15**	4.96

Programmable Logic Controllers

9 DC Inputs/ 7 Relay Outputs

Use these programmable logic controllers (PLCs) in place of relays and to handle simple automation jobs at a low cost. A PLC works by looking at its inputs (such as photoelectric and proximity sensors) and, depending on their state, turning its outputs on or off.

Windows-based software eliminates the need for a hand-held programmer. You'll need a PC running Windows 95 or better with a CD-ROM drive and an RS-232 serial port. Serial interface cable included. The controller's 24 VDC inputs and relay outputs are rated 2 amps @ 240 VAC/30 VDC. Dual processing speeds allow fast scan times. They can process 1,000 steps of basic instructions in 1.65 mS and complete end processing in 0.64 mS. They include a switch simulator for testing before installation.

Controllers include a built-in power supply for DC sensors and EEPROM backup memory that retains the program and data during power outages. 6561K1 has 15KB of memory; K2 has 27KB. Both have plastic housings and screw-terminal connections. Basic programming instructions are included. Controllers are DIN-rail or panel mountable. Both have two 0.169″ dia. mounting holes (hardware not included) and operate on 100-240 VAC. UL and C-UL listed and CE approved.

	Ht.	Wd.	Dp.		
9 DC Inputs/ 7 Relay Outputs	3.72″	3.15″	2.76″	**6561K1**	$437.47
14 DC Inputs/10 Relay Outputs	3.72″	3.74″	2.76″	**6561K2**	553.83
35 mm DIN Rail (1 m Lg.)				**8961K15**	4.96

Shared Run-Time Relays

Also known as alternating relays, these relays automatically alternate between two devices such as two pumps or heaters, decreasing and evening out the wear and tear of each device. They can also be wired to run both devices simultaneously when necessary, while otherwise alternating between the two devices as normal. All have a switch to cancel the alternating mode and select one device, useful when maintenance must be done to the other device. All are 8-pin, circular-pin style.

Relays switch two circuits "on" or "off" (DPDT) and are rated 10 amps @ 120/240 VAC. UL recognized and CSA certified.

Socket has screw-terminal connections and is DIN-rail or surface mountable (has two 0.165″ dia. mounting holes, hardware not included). See page 910 for more socket information.

Control Voltage		
24 VAC	**7136K11**	$67.09
120 VAC	**7136K12**	67.09
230 VAC	**7136K13**	67.09
Socket for All Above Relays	**7122K19**	4.07
35 mm DIN Rail (1 m Lg.)	**8961K15**	4.96

Easy-Program Logic Controllers

Controller w/Hand-Held Programmer

Need to program a PLC but don't know how? Not a problem for this user-friendly PLC—it'll lead you through step-by-step with plain-English text screens as you program and execute up to six simultaneous programs. With a 32KB memory capacity and EEPROM backup memory, this PLC retains all programming during power outages. Use to program automation jobs and as a replacement for relays, timing relays, and time switches.

Controllers have six 12-14 VDC inputs and four relay outputs (10 I/O) rated 5 amps @ 115 VAC. Processing speed is 1,000 lines/1 second. They include a 2-ft. power cord with a standard two-prong plug or you can hardwire directly to a 115 VAC supply. Both are DIN-rail or panel mountable (have two 0.138″ dia. mounting holes, hardware not included). Both have screw-terminal connections. Run on 115 VAC.

Controller with hand-held programmer includes a 1-ft. long connection cable.

Controller with PC software includes a serial interface cable and software. You'll need a PC running Windows 95 or better with a CD-ROM drive and an RS-232 serial port.

Remote timer panel monitors and adjusts up to eight timers while the controller is operating. It is NEMA 12 rated for oil protection and can be mounted on a machine (hardware included). Includes a 30″ long cable.

Expansion module lets you expand the PLC to 20 I/Os.

Controller With Hand-Held Programmer	**6884K2**	$330.91
Controller With PC Software	**6884K4**	307.27
Remote Timer Panel	**6884K7**	159.55
Expansion Module (6 Input/4 Output)	**6884K3**	171.36
35 mm DIN Rail (1 m Lg.)	**8961K15**	4.96

Safety Circuit-Monitoring Controllers

Used with access safety, emergency-stop, and coded magnetically actuated switches (such as 7202K on page 895), these controllers, also known as safety relays, shut down a machine if a fault is detected in safety circuits. LED status lights indicate mode of failure for fast diagnostics. Use one relay per safety input device.

Relays check for welded emergency-stop or interlock switch contacts; open circuits, short circuits, or ground faults in the safety circuitry; welded contacts in the relay itself; faults in the relay's monitoring circuits; and inadequate voltage to relay. They accept 10-30 VDC input signals.

Safety output contacts are rated 6 amps @ 250 VAC, except for 7773K61, which is rated 4 amps @ 250 VAC. Auxiliary semiconductor outputs provide 100 mA for signaling purposes. All have fingersafe screw-terminal connections and mount on a 35 mm DIN rail (sold separately below). UL listed, CSA certified, and CE approved.

Control Voltage	No. of Outputs Safety	Auxiliary	Ht.	Wd.	Dp.		
24-230 VAC/VDC	1	2	3.9″	1.8″	4.8″	**7773K61**	$261.60

35 mm DIN Rail (1 m Lg.)						**8961K15**	4.96

Countdown Timer Switches

Rotary Knob with Wall Plate

Rotary Knob without Wall Plate

High Amp Rotary Knob

Push-Button

Programmable Push-Button

These manually set switches save energy by automatically turning off fluorescent or incandescent lights and other electrical equipment after a set time. Switches with an override feature let you bypass the automatic shutoff for extended use of your equipment. All have screw-terminal connections (except 73415K32, which has wire leads) and are UL listed and CSA certified.

Rotary knob switches mount in a single-device (single-gang) switch box. Rated 20 amps @ 125 VAC; 10 amps @ 250 VAC. Switches *with wall plate* have a silver plastic wall plate and ivory knob. Switches *without wall plate* fit a standard GFCI or rocker switch wall plate (not included, see page 832). **To Order:** Please specify knob color: white or ivory.

High-amp rotary knob switches can also control 240 VAC air conditioners, heaters, and ventilating equipment. Switches mount in a two-device (two-gang) switch box. Rated 28 amps @ 240 VAC; 1 hp @ 120/240 VAC. Each has an aluminum satin-finish wall plate with black knob.

Push-button switch mounts in a single-device (single-gang) switch box. It has four preset times of 5, 10, 15 and 30 minutes. Includes an off button and three switch covers in white, ivory, and light almond. Rated 20 amps @ 120 VAC. Fits a standard GFCI or rocker switch wall plate (not included, see page 832).

Programmable push-button switch eliminates the need to reset a dial with every use. You can program lights to turn off automatically after intervals of five minutes to 12 hours. An LCD counts down until shut-off and offers an optional visual or audible shut-off warning. Mounts in a single-device (single-gang) switch box. Switch is white and includes a white wall plate. Switches one circuit (single pole). Rated 6.6 amps @ 120 VAC, 4.3 amps @ 277 VAC, and 1/6 hp @ 125 VAC.

Programmable Timer Switches

Wall mount these timer switches to turn lights on and off at programmed times. They replace any light switch that fits in a single-device (single-gang) wall box. Both switch one circuit (single pole) and operate fluorescent and incandescent lights, as well as other electrical equipment. Come with 6″ wire leads. Color is white.

Dial switch has 24-hour programming. Includes an easy-to-set slide switch with nonremovable trippers and wall plate. Rated 20 amps @ 120 VAC. UL and C-UL listed. ***Digital*** switch has to-the-minute programming that can be set for each day of the week. Unit has an LCD and a memory backup battery. Rated 15 amps @ 120 VAC. UL listed and CSA certified.

About Fuses

How to Read Your Fuse Label

Fuses interrupt overload and short-circuit currents. Overload currents typically are up to 10 times larger than the fuse's available amp rating and occur when your equipment draws more current than it needs. Short circuits are greater than 10 times the fuse's amp rating and occur when the current finds a "shortcut" outside its normal path.

Time-delay fuses delay opening on low-level overloads until the overload has been sustained for a specific amount of time. This prevents the fuse from blowing when exposed to harmless temporary overload currents such as motor start-ups and switching surges. Some time-delay fuses are also known as dual-element fuses.

Fast-acting fuses do not have a time-delay opening. Use them when temporary overload currents are not present. Suitable for resistive loads that don't surge, such as heating and lighting.

Amp rating is the maximum current that a fuse carries under normal conditions.

Interrupt-current rating is the maximum current that a fuse can safely stop in the event of a short circuit.

UL Class Fuses

Don't see the fuse you need? Just tell us what you're looking for and we'll get it for you.

UL Class RK1 Fuses

Time Delay (1/2 to 60 Amp)

Time Delay (100 to 600 Amp)

Fast Acting (1 to 60 Amp)

Fast Acting (80 to 100 Amp)

A rejection-style design safeguards against replacement errors. These fuses can only be replaced with 200,000 amp and higher interrupt-current rated fuses. UL listed and CSA certified. For fuse blocks, see 7688K on page 919.

To Order: Please specify amp rating where necessary.

UL Class J Fuses

Time Delay (1 to 60 Amp)

Time Delay (70 to 400 Amp)

Time Delay with Blown-Fuse Indicator (8 to 60 Amp)

Time Delay with Blown-Fuse Indicator (70 to 200 Amp)

Fast Acting (1 to 60 Amp)

Fast Acting (80 to 400 Amp)

More compact than UL Class RK1 fuses, these fuses are a good choice for tight spaces. UL listed and CSA certified. For fuse blocks, see 7688K and 7721K on page 919.

To Order: Please specify amp rating where necessary.

Time-Delay Fuses— Also known as dual-element fuses. AC interrupt-current rating is 300,000 amps; DC interrupt-current rating is 100,000 amps.

Time-Delay Fuses with Blown-Fuse Indicator— A dot on the side turns red when the fuse blows. AC interrupt-current rating is 200,000 amps; DC interrupt-current rating is 100,000 amps.

Fast-Acting Fuses— AC interrupt-current rating is 200,000 amps; DC interrupt-current rating is 10,000 amps for 15- to 60-amp fuses.

UL Class CF Touch-Safe Fuses and DIN-Rail Mount Fuse Blocks

Fuse

Fuse Block

An enclosed design with recessed plug-in blades prevents accidental contact with electrical circuits. Meet IEC European standards and UL Class CF (cube fuse) requirements. UL listed and CSA certified.

Fuses—A safer alternative for new installations. These time-delay fuses (also known as dual element) have a blown-fuse indicator except for the 1- and 3-amp fuses. AC interrupt-current rating is 300,000 amps; DC interrupt-current rating is 100,000 amps.

To Order: Please specify amp rating.

Fuse Blocks—Mount directly on 35 mm DIN rail (see 8961K on page 915). You can gang them together to create double- and triple-pole configurations.

UL Class Fuse Block Safety Covers

Prevent accidental shocks with these snap-on safety covers. They fit most popular fuses and fuse blocks and have slotted openings for testing with probes. CSA certified and CE approved. UL listed except the covers for Class CC fuses, which have UL recognized components.

Covers with indicator light illuminate yellow when fuse is blown.

Semiconductor Very Fast-Acting Fuses

A

B

With a quicker response time than standard fast-acting fuses, these fuses provide superior circuit protection for sensitive solid-state devices. Interrupt-current rating is 200,000 amps except for 150 VAC fuses, which have a 100,000 amp rating. UL recognized and CE approved.

To Order: Please specify amp rating where necessary.

1,000 VDC Fast-Acting Fuses and Fuse Blocks

Fuse

Fuse Block

Developed for the solar industry, these fuses and fuse blocks handle the requirements of high-voltage DC applications. Meet IEC European standards.

Fuses withstand the cycling conditions and environment associated with outdoor installations. Interrupt current rating is 10,000 amps. UL listed.

To Order: Please specify amp rating.

Fuse blocks are touch-safe style and mount on 35 mm DIN rail (see 8961K on page 915). UL recognized.

UL Class CC Midget Fuses

Replacement errors aren't a concern for these fuses, which are used in power distribution branch circuits. They have a rejection-style design that ensures they can only be replaced with 200,000 amp and higher interrupt-current rated fuses. UL listed. For fuse blocks, see 7716K, 6113T, and 7055K on page 921.

To Order: Please specify amp rating.

Time-Delay Fuses for Motors— AC interrupt-current rating is 200,000 amps; DC interrupt-current rating is 100,000 amps for 1/4- to 10-amp fuses and 20,000 amps for 12- to 60-amp fuses.

Time-Delay Fuses for Transformers— AC interrupt-current rating is 200,000 amps; 12-amp and higher fuses have a DC interrupt-current rating of 20,000 amps.

Fast-Acting Fuses— AC interrupt-current rating is 200,000 amps.

Midget Fuses

While these fuses provide additional equipment protection, they're not designed for power distribution branch circuits. UL listed and CSA certified. For fuse blocks, see 7722K, 7716K, and 7055K on page 921.

To Order: Please specify amp rating.

Time-Delay Fuses— AC interrupt-current rating is 10,000 amps.

Fast-Acting Fuses— AC interrupt-current rating is 10,000 amps for 250 VAC fuses (except 12 amp is 750 amps) and 100,000 amps for 600 VAC fuses. DC interrupt-current rating is 10,000 amps for DC-rated fuses.

Midget Fuse Blocks

Blocks ***for 1/10-*** to ***30-amp*** fuses have 0.25″ quick-disconnect terminals (rated to 20 amps); all others have box lugs. Blocks ***for UL Class CC*** and ***35- to 60-amp*** fuses are UL listed; all others are UL recognized. All are CSA certified.

DIN-rail adapter allows you to mount 1/10- to 30-amp midget fuse blocks directly on 35 mm DIN rail (see 8961K on page 915). Single- and double-pole blocks use one adapter; triple-pole blocks require two adapters.

DIN-Rail Adapter for 1/10- to 30-amp Fuse Blocks							7716K81	$2.49

DIN-Rail Mount Midget Fuse Blocks

An enclosed touch-safe design prevents accidental contact with electrical circuits. These fuse blocks mount on 35 mm DIN rail (see 8961K on page 915). Use with switchboard panels, small motors, and transformers. Rated 30 amps and 600 VAC/600 VDC. CSA certified.

Blocks ***for UL Class CC fuses*** are UL listed. Blocks ***for Non-UL Class*** fuses are UL recognized.

5 mm Dia. Glass-Tube Fuses

Fast Acting

Time Delay

These fuses are 20 mm long. For fuse blocks and fuse holders, see 7687K, 7087K, and 7696K on page 923.

Fast-Acting Fuses—*250 VAC* fuses are CSA certified except for 16-amp fuse. Interrupt-current rating is 35 amps @ 250 VAC. 1/10- to 10-amp fuses are UL recognized except 6978K4 is UL listed. *125 VAC* 3.15- to 6-amp fuses are UL listed and CSA certified. Interrupt-current rating is 10,000 amps @ 125 VAC. 7- to 15-amp fuses are UL recognized. Interrupt-current rating is 150 amps @ 125 VAC.

Time-Delay Fuses—UL recognized, CSA certified, and meet IEC European standards. Interrupt-current rating is 35 amps @ 250 VAC.

To Order: Please specify amp rating.

1/4" Dia. Ceramic-Tube Fuses

Designed for high-current electronic circuits such as microwave ovens. These 3AB fuses are 1 1/4" long. For fuse blocks and fuse holders, see 7687K, 7087K, and 7696K on page 923.

Fast-Acting Fuses—*Fuse types ABC, GAB,* and *314* up to 15 amps are UL listed and have an interrupt-current rating of 10,000 amps @ 125 VAC/VDC; 20- to 30-amp fuses are UL recognized and have an interrupt-current rating of 1,000 amps @ 125 VAC and 400 amps @ 125 VDC.

Fuse type 505 are UL and C-UL recognized and CE approved. 10- and 12-amp fuses have an interrupt-current rating of 20,000 amps. 16- to 30-amp fuses have an AC interrupt-current rating of 30,000 amps and a DC interrupt-current rating of 20,000 amps.

Very Fast-Acting Fuses—UL recognized, CSA certified, and CE approved. Interrupt-current rating is 10,000 amps @ 125 VAC/VDC for 1- to 15-amp fuses and 200 amps @ 125 VAC/VDC for 20- and 25-amp fuses.

Time-Delay Fuses—CSA certified and CE approved. 1/4- to 20-amp fuses are UL listed; 25- and 30-amp fuses are UL recognized. Interrupt-current rating for all is 10,000 amps @ 125 VAC; 20- to 30-amp fuses also have an interrupt-current rating of 10,000 amps @ 125 VDC.

To Order: Please specify amp rating.

For information about fuses, see page 916.

Don't see the fuse or fuse block you need? Just tell us what you're looking for and we'll get it for you.

Fuse Blocks for Glass-Tube and Ceramic-Tube Fuses

Spring clips hold your 3AB and 3AG (1/4″ Dia.×1 1/4″ Lg.) fuses securely while allowing quick changes. Blocks are rated 300 VAC. UL recognized.

10-fuse blocks easily snap apart into separate units.

Inline Fuse Holders for Glass-Tube and Ceramic-Tube Fuses

Add fuse protection to a single wire.

Holders for 3AB and 3AG Fuses— Use with 1/4″ Dia.×1 1/4″ Lg. fuses. *Wire-lead* holder has 9″ leads for connecting to terminals and includes a 20-amp fuse. Made of plastic. *Crimp-on* holder is made of waterproof rubber.

Holders for 3AB, 3AG, and 8AG Fuses— Use with 1/4″ Dia.×1 1/4″ Lg. and 1/4″ Dia.×1″ Lg. fuses. Made of plastic.

Holders for 5 mm Dia.×20 mm Lg. Fuses— Made of plastic. *Wire-lead* holder has 4″ leads for connecting to terminals.

Panel-Mount Fuse Holders for Glass-Tube and Ceramic-Tube Fuses

All have quick-disconnect terminals, fit into the panel cutout sizes shown above, and are made of plastic. UL recognized.

Holder for 2AG fuses has a screwdriver slot knob. Rated 10 amps and 300 VAC. Maximum panel thickness is 1/4″.

Holders for 3AB/3AG (1/4″ Dia.×1 1/4″ Lg.) and ***5 mm Dia.×20 mm Lg. fuses*** have a knob that unlocks with a twist. Holders for 3AB/3AG fuses are rated 20 amps and 250 VAC; holders for 5 mm×20 mm fuses are rated 16 amps and 250 VAC. Maximum panel thickness is 1/8″.
